EXECUTIVE SUMMARY

The purpose of hazard mitigation is to reduce or eliminate long-term risk to people and property from hazards. DeKalb County and participating jurisdictions and school/special districts developed this multi-jurisdictional local hazard mitigation plan update to reduce future losses from hazard events to the County and its communities and school/special districts. The plan is an update of a plan that was approved on October 4, 2018. The plan and the update were prepared pursuant to the requirements of the Disaster Mitigation Act of 2000 to result in eligibility for the Federal Emergency Management Agency (FEMA) Hazard Mitigation Assistance Grant Programs.

The DeKalb County Multi-Hazard Mitigation Plan is a multi-jurisdictional plan that covers the following jurisdictions that participated in the planning process:

- Unincorporated DeKalb County
- Amity
- Clarksdale
- Maysville
- Osborn
- Stewartsville
- Union Star
- Weatherby
- Maysville School District
- Osborn School District
- Stewartsville School District
- Union Star School District

DeKalb County and the entities listed above developed a Multi-Jurisdictional Hazard Mitigation Plan that was approved by FEMA on October 4, 2018, (hereafter referred to as the *2018 Hazard Mitigation Plan*). This current planning effort serves to update that previously approved plan.

The plan update process followed a methodology in accordance with FEMA guidance, which began with the formation of a Mitigation Planning Committee (MPC) comprised of representatives from DeKalb County and participating jurisdictions. The MPC updated the risk assessment that identified and profiled hazards that pose a risk to County A and analyzed jurisdictional vulnerability to these hazards. The MPC also examined the capabilities in place to mitigate the hazard damages, with emphasis on changes that have occurred since the previously approved plan was adopted. The MPC determined that the planning area is vulnerable to several hazards that are identified, profiled, and analyzed in this plan. Riverine and flash flooding, winter storms, severe thunderstorms/hail/lightning/high winds, and tornadoes are among the hazards that historically have had a significant impact.

Based upon the risk assessment, the MPC agreed to carry forward the updated 2018 goals for reducing risk from hazards. The goals are listed below:

Goal 1: Protect the lives, property and livelihoods of all citizens.

1. Objective: Provide sufficient warning of impending disasters.
2. Objective: Increase knowledge of natural hazards among citizens.
3. Objective: Protect residential and commercial structures in the present and future.

Goal 2: Reduce the impact of disasters.

1. Objective: Manage growth in designated areas through sustainable policies, principles and practices.

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

1. Objective: Increase disaster mitigation management capability in local governments.
2. Objective: Strengthen critical infrastructure.

To advance the identified goals, the MPC developed recommended mitigation actions, as summarized in the table on the following pages. The MPC developed an implementation plan for each action, which identifies priority level, background information, ideas for implementation, responsible agency, timeline, cost estimate, potential funding sources, and more. These additional details are provided in Chapter 4.

Table I. Mitigation Action Matrix

| # | Action | Jurisdiction | Priority | Goals Addressed | Hazards Addressed | Address Current Development | Address Future Development | Continued Compliance with NFIP |
|-------|------------------------------------|---------------|----------|-----------------|-----------------------|-----------------------------|----------------------------|--------------------------------|
| | Prevention Public Education | | | | | | | |
| 1.2.1 | Storm shelter map | Stewartsville | High | 1 | Tornado, thunderstorm | x | x | x |

| # | Action | Jurisdiction | Priority | Goals Addressed | Hazards Addressed | Address Current Development | Address Future Development | Continued Compliance with NFIP |
|--|------------------------|-------------------------------|----------|-----------------|--|-----------------------------|----------------------------|--------------------------------|
| 1.2.2 | Public education | DeKalb County | High | 1 | Dam failure, drought, earthquake, flood, heat wave, severe winter weather, thunderstorm, tornado, wildfire | x | x | x |
| 1.2.10 | Water and conservation | Maysville | High | 1 | Drought, heat wave | x | x | n/a |
| 1.2.11 | Water and conservation | DeKalb County | High | 1 | Drought, heat wave | x | x | n/a |

| 3.1.7 | Earthquake mitigation | Osborn School District | Medium | 3 | Earthquake | x | x | n/a |
| 3.1.8 | Earthquake mitigation | Stewartsville School District | High | 3 | Earthquake | x | x | n/a |

PREREQUISITES

44 CFR requirement 201.6(c)(5): The local hazard mitigation plan shall include documentation that the plan has been formally adopted by the governing body of the jurisdiction requesting approval of the plan. For multi-jurisdictional plans, each jurisdiction requesting approval of the plan must document that it has been formally adopted.

This plan has been reviewed by and adopted with resolutions or other documentation of adoption by all participating jurisdictions and schools/special districts. The documentation of each adoption is included in Appendix D, and a model resolution is included on the following page.

The jurisdictions listed in the Executive Summary participated in the development of this plan and have adopted the multi-jurisdictional plan.

Model Resolution

(LOCAL GOVERNING BODY/SCHOOL DISTRICT), Missouri RESOLUTION NO. _____

A RESOLUTION OF THE (LOCAL GOVERNING BODY /SCHOOL DISTRICT) ADOPTING THE (PLAN NAME)

WHEREAS the (local governing body/school district) recognizes the threat that natural hazards pose to people and property within the (local governing body/school district); and

WHEREAS the (local governing body/school district) has participated in the preparation of a multi-jurisdictional local hazard mitigation plan, hereby known as the (plan name), hereafter referred to as the Plan, in accordance with the Disaster Mitigation Act of 2000; and

WHEREAS the Plan identifies mitigation goals and actions to reduce or eliminate long-term risk to people and property in the (local governing body/school district) from the impacts of future hazards and disasters; and

WHEREAS the (local governing body) recognizes that land use policies have a major impact on whether people and property are exposed to natural hazards, the (local governing body/school district) will endeavor to integrate the Plan into the comprehensive planning process; and

WHEREAS adoption by the (local governing body/school district) demonstrates their commitment to hazard mitigation and achieving the goals outlined in the Plan.

NOW THEREFORE, BE IT RESOLVED BY THE (LOCAL GOVERNMENT/SCHOOL DISTRICT), in the State of Missouri, THAT:

In accordance with (local rule for adopting resolutions), the (local governing body/school district) adopts the final FEMA-approved Plan.

ADOPTED by a vote of _____ in favor and ___ against, and ___ abstaining, this _____ day of _____, _____.

1 INTRODUCTION AND PLANNING PROCESS

| | | |
|-------|---|-----|
| 1 | INTRODUCTION AND PLANNING PROCESS | 1.1 |
| 1.1 | <i>Purpose</i> | 1.1 |
| 1.2 | <i>Background and Scope</i> | 1.2 |
| 1.3 | <i>Plan Organization</i> | 1.2 |
| 1.4 | <i>Planning Process</i> | 1.3 |
| 1.4.1 | Multi-Jurisdictional Participation..... | 1.5 |
| 1.4.2 | The Planning Steps | 1.6 |

1.1 PURPOSE

Hazard mitigation is any sustained action taken to reduce or eliminate the long-term risk to human life and property from hazards. Mitigation activities may be implemented prior to, during or after an incident. However, it has been demonstrated that hazard mitigation is most effective when based on an inclusive, comprehensive, long-term plan that is developed before a disaster occurs (<http://www.fema.gov/what-mitigation>).

Federal Emergency Management Agency (FEMA) has implemented the various hazard mitigation planning provisions through the Code of Federal Regulations (CFR) at 44 CFR Part 201. The CFR provisions set forth the mitigation plan requirement for local and tribal governments as a condition of receiving FEMA hazard mitigation assistance. Under 44 CFR §201.6, local governments, schools or other publicly funded districts must have adopted a FEMA-approved local hazard mitigation plan in order to apply for hazard mitigation project grants. Section 322 of the Robert T. Stafford Relief and Emergency Assistance Act (P.L. 93- 288), as amended by the Disaster Mitigation Act of 2000 (DMA) (P.L. 106-390), provides for States, Tribes and local governments to undertake a risk-based approach to reducing risks to natural hazards through mitigation planning.

The plan also meets the minimum planning requirements for all FEMA mitigation programs, such as Hazard Mitigation Grant Program (HMGP), Flood Mitigation Assistance (FMA), Pre-Disaster Mitigation (PDM) and where appropriate, other FEMA mitigation related programs such as the National Earthquake Hazards Reduction Program (NEHRP), the National Flood Insurance Program (NFIP) and the Community Rating System (CRS). Entities that do not adopt the plan will not be eligible for mitigation grants.

The Disaster Mitigation Act of 2000 (Public Law 106-390) and the implementing regulations set forth by the Interim Final Rule were published in the Federal Register on February 26, 2002, (44 CFR §201.6) and finalized on October 31, 2007. (Hereafter, these requirements and regulations will be referred to collectively as the Disaster Mitigation Act or DMA). The DMA established the requirements for local hazard mitigation plans are in the Robert T. Stafford Disaster Relief and Emergency Act (Public Law 93-288). The communities and school districts were informed that adopting the plan is a prerequisite for mitigation grant eligibility. Entities that do not adopt the plan will not be eligible for mitigation grants.

1.2 BACKGROUND AND SCOPE

As required by 44 CFR §201.6(d)(3), local jurisdictions must review and revise their plan to reflect changes in development, progress in local mitigation efforts and changes in priorities and resubmit it for approval every five (5) years in order to continue to be eligible for mitigation project grant funding. The 2023 DeKalb County Multi-Jurisdictional Hazard Mitigation Plan is a revision of the previous five-year update adopted October 4, 2018 which was the second update of the original plan.

Jurisdictions that participated in the last plan and are continuing participation in the 2023 update include:

- DeKalb County
- Village of Amity
- City of Clarksdale
- City of Maysville
- City of Osborn
- City of Stewartville
- City of Union Star
- Village of Weatherby
- Maysville School District
- Osborn School District
- Stewartville School District
- Union Star School District

The jurisdictions of Cameron, Stewartville and Osborn are located in both DeKalb County and Clinton County. Stewartville and Osborn are participating in the DeKalb County plan while Cameron is participating in the Clinton County plan. Information in the plan will be used to help guide and coordinate mitigation activities and decisions for local land use policy.

1.3 PLAN ORGANIZATION

The 2023 HMP is organized into the following chapters:

- Chapter 1: Introduction and Planning Process
- Chapter 2: Planning Area Profile and Capabilities
- Chapter 3: Risk Assessment
- Chapter 4: Mitigation Strategy
- Chapter 5: Plan Implementation and Maintenance
- Appendices
 - Appendix A: References
 - Appendix B: Planning Process Documentation
 - Appendix C: Completed/Deleted Mitigation Actions
 - Appendix D: Adoption Resolutions

The plan format has been standardized across the state in order to create hazard mitigation plans that are more consistent with each other, making it easier to locate information as well as making plans more consistent from update to update. Chapter 5, Plan Maintenance Process,

was added to expand the amount of information on maintaining the plan between updates. In the 2013 update, plan maintenance information was located in Section 4, Mitigation Strategy. Routine review and maintenance of mitigation actions and goals is important to make sure actions are being implemented on schedule and for the plan’s goals to guide mitigation efforts. By increasing the focus on plan maintenance through the addition of a separate chapter, this aspect will receive the attention it deserves.

Table 1.1 shows each chapter and summarizing the changes made in the update.

Table 1.1. Changes Made in Plan Update

| 2018 HMP | 2023 HMP |
|---|--|
| Chapter 1 - Introduction and Planning Process | Updated members of the Mitigation Planning Committee (MPC) and participating jurisdictions that formally adopted the Plan. |
| Chapter 2 - Planning Area Profile and Capabilities | Noted new Census info for participating jurisdictions. |
| Chapter 3 - Risk Assessment | Combined extreme heat and extreme cold into one hazard: extreme temperatures. |
| Chapter 4 - Mitigation Strategy | The mitigation category of each action was added to the action worksheets. |
| Chapter 5 - Plan Implementation and Maintenance | Updated MPC meetings for evaluating and updating the plan to quarterly. |

1.4 PLANNING PROCESS

44 CFR Requirement 201.6(c)(1): [The plan shall document] the planning process used to develop the plan, including how it was prepared, who was involved in the process, and how the public was involved.

Mo-Kan Regional Council was contracted to facilitate the update of the multi-jurisdictional, local hazard mitigation plan. Mo-Kan staff met with the DeKalb County commissioners and Emergency Management Director during the informational meeting to develop a list of stakeholders and local jurisdiction representatives for the Mitigation Planning Committee (MPC). The updating process involved four MPC meetings. Mo-Kan staff produced the draft and final plan update in a FEMA-approved document and coordinated with the Missouri State Emergency Management Agency (SEMA) and FEMA plan reviews.

The main topics at the MPC meetings are discussed in Section 1.4.2. Mo-Kan solicited public involvement in the planning process. Press releases were disseminated for the MPC

meetings for all four meetings, held on December 7, 2021, February 8, 2022, April 12, 2022, and June 14, 2022. A planning meeting was held with the County Commissioners and Emergency Management Directors on October 5, 2021. Appendix B provides the results from the survey that was distributed to the public for input into the risk analysis and planning process.

The draft of the plan was posted on the Mo-Kan website for public review and comment. A press release was sent notifying the public that the plan was available for comment. Input from city and county officials was also solicited through the online availability of the draft.

Table 1.2 shows the MPC members and the entities they represent, along with their titles.

Table 1.2. Jurisdictional Representatives of DeKalb County Mitigation Planning Committee

| Name | Title | Department | Jurisdiction/Agency /Organization |
|--------------------|----------------------------|-------------------|-----------------------------------|
| Penny Gans | DeKalb County Deputy Clerk | Commission | DeKalb County |
| Harold Allison | EMD | Commission | DeKalb County |
| Tanya Zimmerman | Assessor | Assessor's Office | DeKalb County |

| Union Star School District | | | | | ü | |

1.4.1 Multi-Jurisdictional Participation

44 CFR Requirement §201.6(a)(3): Multi-jurisdictional plans may be accepted, as appropriate, as long as each jurisdiction has participated in the process and has officially adopted the plan.

Mo-Kan Regional Council was contracted to facilitate the plan’s updating process. Mo-Kan staff met with the DeKalb County Commissioners, Emergency Management Director, and Deputy Clerk during the initial planning meeting to develop a list of area stakeholders, school districts, special districts and local jurisdiction representatives for the Mitigation Planning Committee (MPC). The updating process included the kick-off meeting and three subsequent MPC meetings. Each participating jurisdiction designated a representative responsible for communicating to their respective jurisdiction regarding the data and information needed for the plan update. This information included the Data Questionnaires, updating critical facility inventory, reviewing past action items, creating new action items (taking cost-effectiveness and practicality into account), review and comment on the plan drafts. Mo-Kan staff produced the draft and final plan update in a FEMA-approvable document and coordinated with the Missouri State Emergency Management Agency (SEMA) and FEMA plan reviews.

The main topics at the MPC meetings are discussed in Section 1.4.2. Mo-Kan solicited public involvement in the planning process. Press releases were disseminated for the MPC meetings.

The draft of the plan was posted on the Mo-Kan and DeKalb County website for public review and comment. Input from city and county officials was solicited through distribution of drafts of the plan to their jurisdictions. All participants adopted the mitigation plan prior to submittal to SEMA and FEMA for final approval.

Communities with full-time staff were able to attend meetings, in general, but the communities without full-time staff had difficulty. The MPC agreed that if a jurisdiction was unable to attend the meetings that participation could be met by communicating with Mo-Kan to receive meeting materials and submitting necessary paperwork. See **Table 1.4** for jurisdictional involvement in the planning process, which shows the representation of each participating jurisdiction at the planning meetings, the provision of responses to the Data Collection Questionnaire, the active critical facility validation, the update/development of mitigation actions, and the documentation of donated time, as applicable. Meeting power points, sign-in sheets and in-kind documentation is located in Appendix B.

Table 1.4. Jurisdictional Participation in Planning Process

| Jurisdiction | Kick-off Meeting | Meeting #2 | Meeting #3 | Meeting #4 | Data Collection Questionnaire Response | Update/Develop Mitigation Actions |
|------------------------------|------------------|------------|------------|------------|--|-----------------------------------|
| DeKalb County | ü | ü | ü | ü | ü | ü |
| Village of Amity | | | | | ü | ü |

1.4.2 The Planning Steps

FEMA’s Local Mitigation Planning Handbook (March 2013), Local Mitigation Plan Review Guide (October 1, 2013), and Integrating Hazard Mitigation into Local Planning: Case Studies and Tools for Community Officials (March 1, 2013) were used as the sources for the HMP update. The update followed the 10-step planning process adapted from FEMA’s Community Rating System (CRS) and Flood Mitigation Assistance programs. The 10-step process allows the Plan to meet funding eligibility requirements of the Hazard Mitigation Grant Program, Pre-Disaster Mitigation Program, Community Rating System, and Flood Mitigation Assistance Program. **Table 1.5** shows how the CRS process aligns with the Nine Task Process outlined in the 2013 Local Mitigation Planning Handbook.

Table 1.5. County Mitigation Plan Update Process

| Community Rating System (CRS) Planning Steps (Activity 510) | Local Mitigation Planning Handbook Tasks (44 CFR Part 201) |
|---|--|
| Step 1. Organize | Task 1: Determine the Planning Area and Resources |
| | Task 2: Build the Planning Team 44 CFR 201.6(c)(1) |
| Step 2. Involve the public | Task 3: Create an Outreach Strategy 44 CFR 201.6(b)(1) |
| Step 3. Coordinate | Task 4: Review Community Capabilities 44 CFR 201.6(b)(2) & (3) |
| Step 4. Assess the hazard | Task 5: Conduct a Risk Assessment 44 CFR 201.6(c)(2)(i) 44 CFR 201.6(c)(2)(ii) & (iii) |
| Step 5. Assess the problem | |
| Step 6. Set goals | Task 6: Develop a Mitigation Strategy 44 CFR 201.6(c)(3)(i); 44 CFR 201.6(c)(3)(ii); and 44 CFR 201.6(c)(3)(iii) |
| Step 7. Review possible activities | |
| Step 8. Draft an action plan | |
| Step 9. Adopt the plan | Task 8: Review and Adopt the Plan |
| Step 10. Implement, evaluate, revise | Task 7: Keep the Plan Current |
| | Task 9: Create a Safe and Resilient Community 44 CFR 201.6(c)(4) |

***Step 1: Organize the Planning Team
(Handbook Tasks 1, 2, and 4)***

In February 2021, Mo-Kan entered into cooperative agreements with SEMA and DeKalb County to prepare this multi-jurisdictional plan for local jurisdictions in DeKalb County. Discussions on the development of the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan began on October 4, 2021, with a meeting attended by Mo-Kan staff, DeKalb County Commissioners and the Emergency Management Director for the county. This meeting was conducted to discuss the timeline for developing the hazard mitigation plan, the planning process, identification of stakeholders and community organizations to include in the planning process and a date for the kick-off meeting. Attendees identified a list of potential participants to invite, and Mo-Kan staff mailed invitations for the kick-off meeting. The list of invitees included local elected officials, municipal and county government staff, emergency services personnel, school administrators, county township representatives, past hazard mitigation plan participants, private industry and utility providers, and conservation and public health partners. For a complete list of those invited to participate, see Appendix B.

The MPC met on four occasions from December 2021 to June 2022 to collaborate on the plan update. Participants assisted in data collection; reviewed and revised goals, objectives, and mitigation strategies; and provided reviews and comments on the plan throughout the update process. Communication with MPC members occurred throughout the planning process through face-to-face meetings, phone interviews, and email correspondence in addition to committee meetings. Public notices, press releases, agendas and sign-in sheets for those in-person

meetings are in Appendix B.

Table 1.6 documents all meetings held.

Table 1.6. Schedule of MPC Meetings

| Meeting | Topic | Date |
|-----------------------|--|---------|
| Informational Meeting | Mo-Kan staff met with commissioners and EMD to discuss potential MPC participants and the timeline for updating the plan, including setting the kick-off meeting date. Jurisdictions were mailed questionnaire forms after this meeting. | 10-5-21 |
| Kick-off Meeting | Discussed background and importance of HMP, timeline, participation requirements, data collection & next steps | 12-7-21 |
| Planning Meeting #2 | Discussed hazards in the county, outreach opportunities, and reviewed goals and objectives | 2-8-22 |
| Planning Meeting #3 | Action assessment workshop session | 4-12-22 |
| Planning Meeting #4 | Plan maintenance process | 6-14-22 |

***Step 2: Plan for Public Involvement
(Handbook Task 3)***

44 CFR Requirement 201.6(b): An open public involvement process is essential to the development of an effective plan. In order to develop a more comprehensive approach to reducing the effects of natural disasters, the planning process shall include: (1) An opportunity for the public to comment on the plan during the drafting stage and prior to plan approval.

The MPC held its kick-off meeting on December 7, 2021. Some of the MPC members had participated in the 2018 update but the updating process was new for some attendees. There was discussion on soliciting public input and the importance of public outreach. It was determined to hold a series of public meetings and left up to individual jurisdictions to disseminate information at their own meetings and events. Mo-Kan staff disseminated public notices and press releases to the media, urging public attendance and input. A survey was created to get the public’s feedback about what hazards they were the most concerned with and what mitigation actions they would like to see included in the update. The online survey was posted on the Mo-Kan website and a link to the survey was made available to jurisdictions to disseminate. There were ten survey responses and in summary, the respondents felt like severe winter weather, thunderstorms/high wind/lightning/hail and extreme heat were the most likely disaster to occur. These perceptions aligned with the MPC. The survey results are in Appendix B. Additionally, an HMP informational brochure was developed to distribute at various meetings and some jurisdictions included this information in community mailings. Ready-In-Three materials were distributed to the public in City of Clarksdale during a local spring community event.

Step 3: Coordinate with Other Departments and Agencies and Incorporate Existing Information
(Handbook Task 3)

44 CFR Requirement 201.6(b): An open public involvement process is essential to the development of an effective plan. In order to develop a more comprehensive approach to reducing the effects of natural disasters, the planning process shall include: (2) An opportunity for neighboring communities, local and regional agencies involved in hazard mitigation activities, and agencies that have the authority to regulate development, as well as businesses, academia and other private and non-profit interests to be involved in the planning process. (3) Review and incorporation, if appropriate, of existing plans, studies, reports, and technical information.

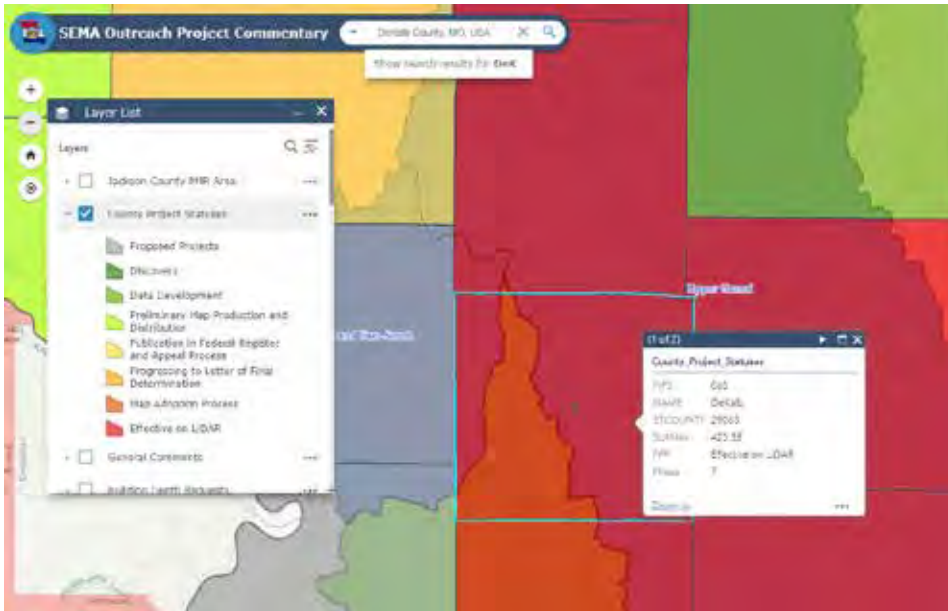

At the informational meeting, held October 5, 2021, the DeKalb County Emergency Manager Director and commissioners assisted with compiling a list of organizations they determined to be integral to hazard mitigation planning to invite to participate in the plan update. Invitations were sent to all jurisdictions located in DeKalb County, school districts, emergency service personnel, and private industry representatives. A list of organizations and agencies that received invitations is in Appendix B. The MPC was comprised of those who responded to plan update invitations.

Coordination with FEMA Risk MAP Project

Risk Mapping, Assessment, and Planning (Risk MAP) is the Federal Emergency Management Agency (FEMA) Program that provides communities with flood information and tools they can use to enhance their mitigation plans and act to better protect their citizens. Through collaboration with State, Tribal, and local entities, Risk MAP delivers quality data that increases public awareness and leads to action that reduces risk to life and property.

FEMA is in the discovery phase of updating flood risk maps in DeKalb County. While there are several FIS/DFIRMs (available from the Map Service Center), the most current DFIRM for the county is from 2003, and this was used for the floodplain maps created for this update. A timeline for updating the maps was outlined in a recent communication from SEMA, with field survey collection anticipated for the fall of 2022.

Figure 1.1. RiskMAP Study Status Map

Source: <https://mosema.maps.arcgis.com/apps/webappviewer/index.html?id=d574183ab5be4f23846c19b50196d223>

Integration of Other Data, Reports, Studies, and Plans

Additional input was solicited from other agencies and organizations that were not able to attend planning committees. Data was collected and reviewed from multiple sources, which are referenced throughout the document. These sources include, but are not limited to, the US Census, Andrew and Buchanan Counties HMPs (adjacent counties), Flood Insurance Studies (FIS), Flood Insurance Rate Maps (FIRMS), State Department of Natural Resources (DNR) dam information, National Inventory of Dams (NID), dam inspection reports, local comprehensive plans and land use plans, US Department of Agriculture's (USDA) Risk Management Agency Crop Insurance Statistics.

Step 4: Assess the Hazard: Identify and Profile Hazards (Handbook Task 5)

At the first MPC meeting, held on December 7, 2021, hazards from the 2018 plan were briefly identified and profiled. The MPC agreed that historically, tornadoes and severe weather pose the greatest risk to the count. At the second MPC meeting, held on February 8, 2022, the hazards were discussed in more detail. A survey was also distributed to get the public's feedback on which hazards were of most concern. A list of previous disaster declarations was available to jurisdictions to assist in their individual risk assessments, but this list was not reviewed at an MPC meeting. The data collection questionnaire information and results from the online survey was used by the individual jurisdictions in evaluating their risk assessment and by Mo-Kan staff in generating the data for risk assessments in Chapter 3. Overall, the input from the online survey, such as the most likely disasters to occur (severe winter weather, thunderstorm/high wind/lightning/hail and extreme heat) and the best way to mitigate the impacts (structure retrofitting, infrastructure retrofitting and safety equipment) align with MPC's approach. However, the MPC identified tornadoes as a higher risk than the survey respondents did. The MPC did not review each jurisdiction's data collection questionnaire, but collectively reviewed and discussed the draft document at the fourth meeting, held June 14, 2022, which

included questionnaire information. The 2018 DeKalb County HMP and the 2018 State Plan provided a basis for the 2022 DeKalb County HMP. Andrew County's HMP was also referred to, as it is a nearby county that also recently went through a hazard mitigation plan update.

Step 5: Assess the Problem: Identify Assets and Estimate Losses (Handbook Task 5)

Jurisdictions identified their respective assets on their Data Collection Questionnaire form, as well as during work sessions. These assets were compared against various GIS layers and HAZUS to assess their vulnerability to disasters.

The city clerks, mayors and/or city council members of their respective jurisdictions collaborated to complete the data collection questionnaires. DeKalb County and the City of Maysville have full-time staff, but other communities have only one or no full-time staff. Providing information on the data collection questionnaires often fell to one person. The superintendents and/or principals completed the data collection questionnaires for their school districts. Most of the data on the school questionnaire forms was readily available, in a different format, for school emergency plans. The data retrieved from the questionnaires can be found in Chapter 3. This data includes information on regulatory, personnel, fiscal and technical capabilities, and existing mitigation initiatives. Inventory estimates for each jurisdiction's building stock in the county were derived by using HAZUS MH 4.2. The methodology for estimating losses varies by hazard. Vulnerability and loss estimates are from the 2018 State Plan or other best available data (where appropriate) and are included for various hazard profiles in the Risk Assessment chapter.

Step 6: Set Goals (Handbook Task 6)

During the third MPC meeting, held April 12, 2022, participants reviewed the plan's previous goals, and they decided to continue with the same goals and objectives in this plan.

DeKalb County's 2023 HMP goals are:

Goal 1: Protect the lives, property and livelihoods of all citizens.

1. Objective: Provide sufficient warning of impending disasters.
2. Objective: Increase knowledge of natural hazards among citizens.
3. Objective: Protect residential and commercial structures in the present and future.

Goal 2: Reduce the impact of disasters.

1. Objective: Manage growth in designated areas through sustainable policies, principles and practices.

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

1. Objective: Increase disaster mitigation management capability in local governments.
2. Objective: Strengthen critical infrastructure.

The goals and objectives for the plan update are the same as in 2018.

Step 7: Review Possible Mitigation Actions and Activities (Handbook Task 6)

At the third MPC meeting, held on April 12, 2022, the mitigation strategy from the previous plan was reviewed and a new strategy was discussed. Representatives from the jurisdictions also reviewed the previous actions and reported on progress made on previously proposed actions. Each jurisdiction was provided with information on how to complete the forms and the actions to be evaluated. Criteria for evaluation of the past actions was discussed during the meeting but due to the sheer number of actions needing to be evaluated, jurisdiction representatives evaluated actions outside of the scheduled MPC meetings.

Participants were to consider the potential cost of each action in relation to the anticipated future cost savings. Members were encouraged to continue forwarding only those actions that substantively addressed long-term risks identified in the risk assessment. Copies of the FEMA publication *Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards* (January 2013) were made available for jurisdictions to reference.

Jurisdictions independently prioritized their actions using the methodology from the 2018 plan, in which jurisdictions self-determined which actions were high, medium, and low priorities. Consideration included the action's potential to save lives and protect property, cost, and local capacity to implement/pursue. The STAPLEE methodology was not used but available to jurisdictions if they wanted to use it. It was discussed that new/modified actions must follow the SMART criteria of being Specific, Measurable, Action-oriented, Relevant and Time-bound. The goals and actions were consistent with the hazards identified in the plan and reflected the local priorities and vulnerability to hazards.

Step 8: Draft an Action Plan (Handbook Task 6)

At the third and fourth MPC meetings, held April 12, 2022, and June 14, 2022, new actions were discussed. The individual jurisdictions submitted their new actions after discussion with their respective city council or school board. It was at the individual jurisdiction's discretion on whether to include actions with low STAPLEE scores. The action worksheets, including the plan for implementation, submitted by each jurisdiction for the updated Mitigation Strategy are included in Chapter 4.

Step 9: Adopt the Plan (Handbook Task 8)

Jurisdictions were provided a digital link to the plan to make available to the public. The public and the jurisdictions were asked for feedback. The plan went before the DeKalb County Commissioners and the other jurisdictions for public comment in July for adoption in Fall 2022. Adoption resolutions can be found in Appendix D.

Step 10: Implement, Evaluate, and Revise the Plan (Handbook Tasks 7 & 9)

At each MPC meeting, plan maintenance was briefly discussed, and participants were reminded that the plan is a living document and periodic review of it will keep it current and relevant. At the fourth MPC meeting, held on June 14, 2022, the discussion was more in

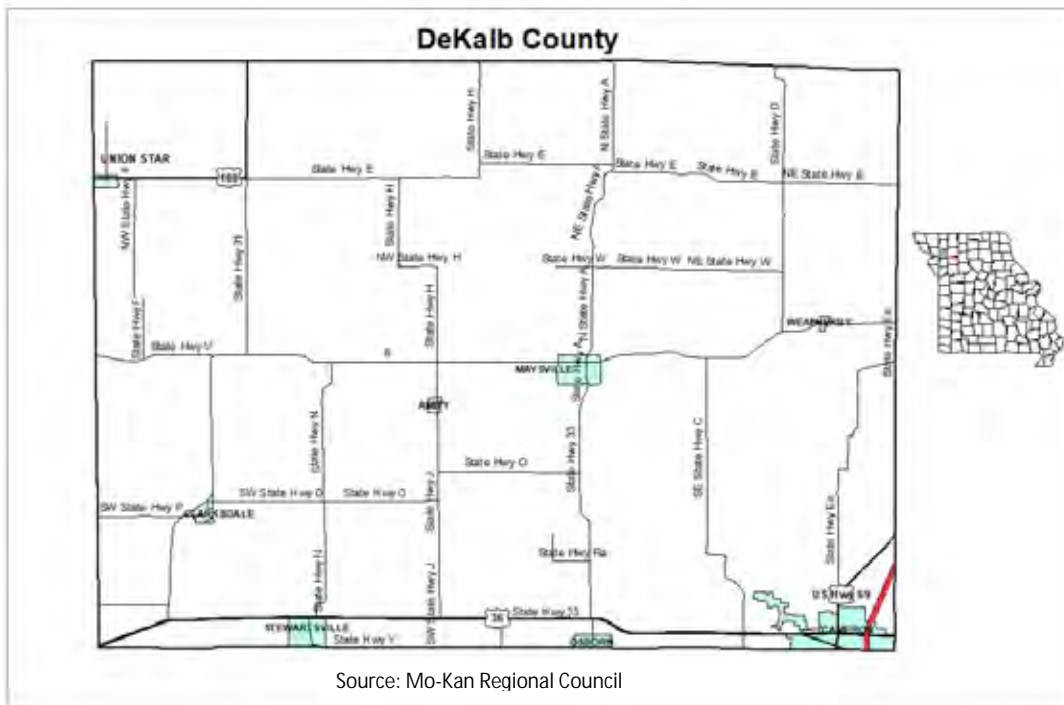

depth, including strategies for plan implementation, monitoring and plan review dates. DeKalb County, and other jurisdictions established general dates to review the plan so they can monitor and evaluate their progress on obtaining the plan's goals and completing the actions. During a review of the plan, the public will be notified and invited to participate. Details of plan maintenance and review are in Chapter 5.

2 PLANNING AREA PROFILE AND CAPABILITIES

| 2.2.10 | Public School District Profiles and Mitigation Capabilities | 2.31 |

2.1 DEKALB PLANNING AREA PROFILE

Figure 2.1. Map of DeKalb County

DeKalb County is bordered by Andrew, Buchanan, Clinton, Caldwell, Daviess and Gentry counties in Missouri. As shown in **Figure 2.1**, the county seat of Maysville is located near the geographic center of the county. Incorporated communities are Amity, Clarksdale, Maysville, Osborn, Stewartsville, Union Star and Weatherby. The City of Cameron is situated partially in DeKalb County and partially in Clinton County and is participating in Clinton County's Hazard Mitigation Plan.

According to the U.S. Census Population as of April 1, 2020, 11,029 people live in DeKalb County. This is a 14.5 percent decline in population compared with the 2010 population of 12,892 and shows a 4.9 percent downward trend in population compared to the 11,597 in population reported in the 2000 U.S. Census. The decline in population could be attributed to the prison population decline in Cameron that occurred in 2019 when the two prisons there were consolidated. Comparatively, both the State of Missouri's and United States' populations have increased over the period between 2000 and 2020 at 2.8 percent and 7.4 percent respectively. DeKalb County's median household income (MHI) was \$58,433 in 2020, compared with \$31,654 in 2000, indicating an 84.6 percent increase over the 20-year period, which is well above Missouri's 14.7-percent increase and the United States' 35.2-percent increase in MHI over the same timeframe. Median home values (MHV) also increased from 2000 to 2020 at the county, state, and federal level, with DeKalb's MHV increasing 72 percent from \$72,700 in 2000 to \$125,000 in 2020; Missouri's MHV increasing 82 percent; and the United States' MHV increasing 92 percent (<http://www.census.gov>, <http://www.mcdc.missouri.edu>).

2.1.1 Geography, Geology and Topography

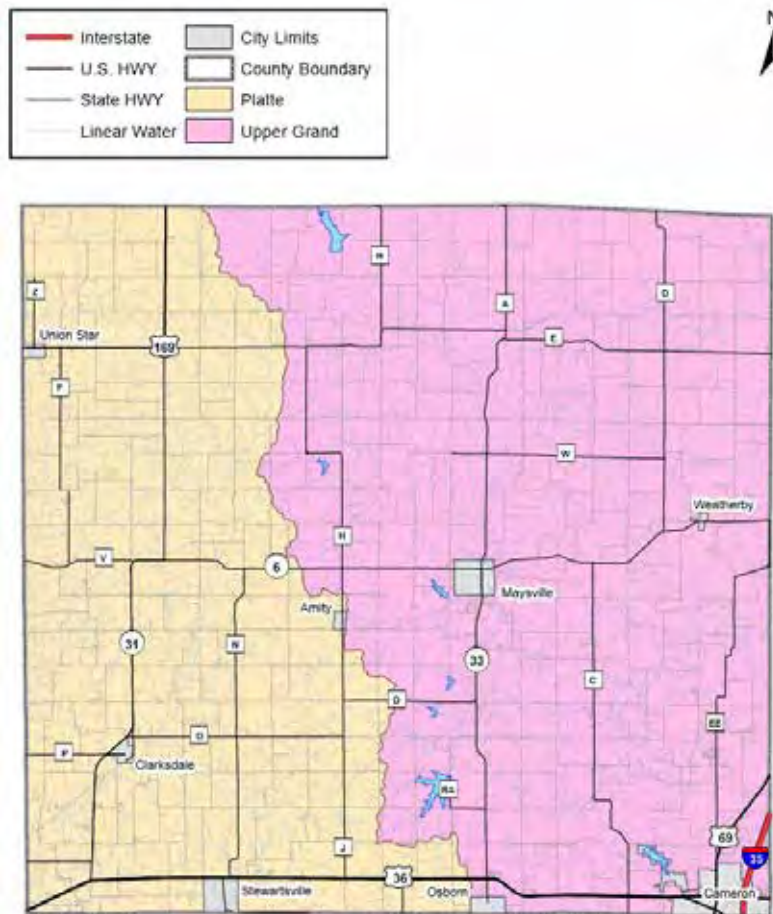

In accordance with the United States Census Bureau the county is about 426 square miles; and about 424 square miles is land, and two square miles is water. The county is predominately rural with centrally located Maysville serving as the county seat. Cameron, located in both Clinton and DeKalb County is the largest population center, with 9,665 residents. Agriculture is the primary land use.

The general geology of DeKalb County can be described as an interbedded limestone and shale bedrock, with glacial till deposited in the soils. There are four associations of soil in this county; an association is a distinctive proportional pattern of soil. The Lamoni-Zook-Shelby association occupies 53 percent of the county, Lagonda-Grundy occupies 29 percent, and Zook-Kennebec and Armstong-Gara-Ladoga each cover 9 percent.

DeKalb County does not have a major river, but there is one fork and two larger creeks. Third Fork Grand River runs from the north to the south, flowing next to Union Star along the western border of DeKalb County. Lost Creek runs from the north to southeast, beginning in the north central part of the county forming King Lake, and then running from the central part of the county to almost straight east, before spilling into Grindstone Creek. Grindstone Creek runs from the northeast to the southwest and is along the eastern border of DeKalb County.

There are two watersheds in DeKalb County. The Platte watershed includes the communities of Amity, Clarksdale, Stewartsville and Union Star. The Upper Grand watershed includes the communities of Cameron, Maysville, Osborn and Weatherby. Figure 2.2 shows the two 8-digit hydrological unit (HUC) watersheds in the county (Source: MoDNR).

Figure 2.2 DeKalb County HUC 8 Watersheds

Source: Mo-Kan Regional Council

2.1.2 Climate

The climate of northwest Missouri is continental in nature with cold winters, hot summers and is subject to extreme changes in temperature, humidity, cloudiness and wind speeds. Weather reports from the Amity Weather Station state the mean average temperature is 52.3°, show that July is the warmest month, and indicates a mean maximum temperature of 86.5° (76.5° is mean average temperature for the month). January is the coldest month and has a mean average minimum temperature of 16.4° (25.6° is the mean average temperature for the month). (Source: http://mrcc.isws.illinois.edu/mw_climate/climateSummaries/climSummOut_temp.jsp?stnId=USC00230143). The average rainfall is 38 inches per year and average snowfall is 18 inches per year (Source: <https://www.ncdc.noaa.gov/temp-and-precip/> and <http://www.bestplaces>)

2.1.3 Population/Demographics

Table 2.1 provides the populations for each city, village, and the unincorporated county for 2000 and 2016 American Community Survey population estimates, as provided by the United States Census Bureau, with the number and percentage change.

The county population will not be completely accurate since portions of some of the jurisdictions overlap into the adjacent counties, such as the case with the cities of Union Star, Stewartsville, Osborn and Cameron. Cameron, the largest incorporated area, is participating in Clinton County's Plan since most of its population reside in Clinton County.

Table 2.1. DeKalb Population 2000-2020 by Jurisdiction

| Jurisdiction | 2000 Census Total Population | 2010 Census Total Population | 2016-2020 ACS 5-yr Estimates | 2010-2020 # Change | 2010-2020 % Change |
|--|------------------------------|------------------------------|------------------------------|--------------------|--------------------|
| DeKalb County | 11,597 | 12,892 | 11,872 | 1,020 | -7.9% |
| Village of Amity | 70 | 54 | 56 | 2 | 3.7% |
| City of Clarksdale | 351 | 271 | 263 | -8 | -3% |
| City of Maysville | 1,212 | 1,114 | 1,142 | 28 | 2.5% |
| City of Osborn | 455 | 423 | 402 | -21 | -5% |
| City of Stewartsville | 759 | 750 | 692 | -58 | -7.7% |
| City of Union Star | 433 | 437 | 555 | 118 | 27% |
| Village of Weatherby | 123 | 107 | 67 | -40 | -37.4% |
| Unincorporated and the City of Cameron | 8,194 | 9,736 | 8,695 | 1,041 | -10.7% |

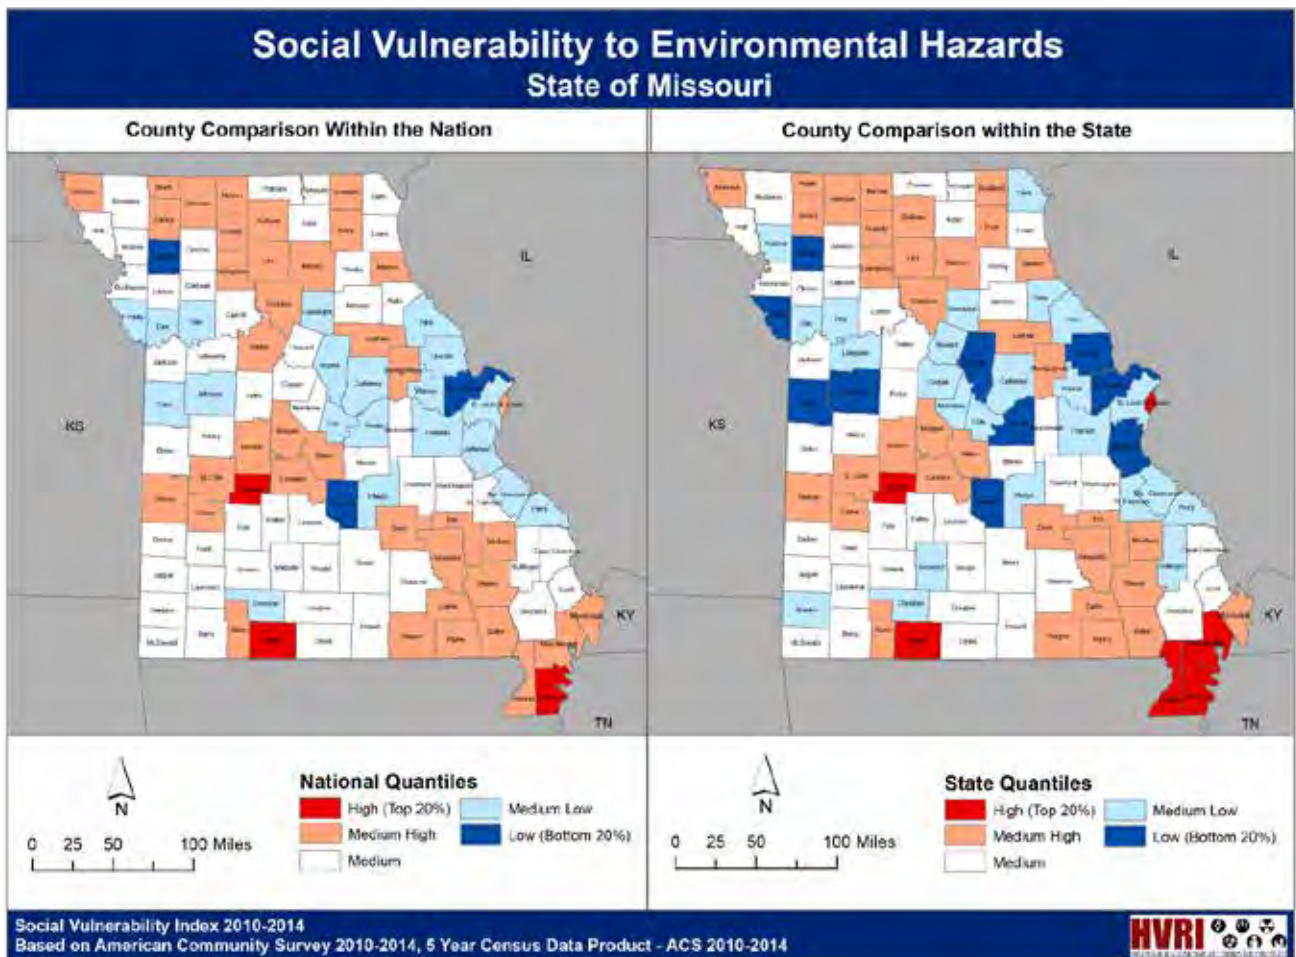

Source: U.S. Bureau of the Census, Decennial Census, annual population estimates/ 5-Year American Community Survey 2020; censusreporter.org *population includes the portions of these cities in adjacent counties

According to the 2016-2020 US Census Bureau ACS 5-year estimates, DeKalb County's 65 years and older population is slightly higher at 17.7 percent than state (16.9 percent) and U.S. (16 percent) percentages for this same age group. Comparatively, the county's population of those under five years of age is 4.8 percent, which is lower than the state (6.1 percent) and U.S. (6 percent) totals for this age group. In summary, the county has a higher population of older residents and a lower population of younger residents when compared to state and national levels.

The vulnerability analysis data in the next chapter includes Social Vulnerability Index (SoVI ®) information from the Hazards and Vulnerability Research Institute at the University of South Carolina. The University developed this index to evaluate and rank the ability to respond to, cope with, recover from, and adapt to disasters. The index synthesizes 29 socioeconomic variables which research literature suggests may contribute to a reduction in a community's ability to prepare for, respond to, and recover from hazards. SoVI ® data sources include primarily those from the United States Census Bureau. DeKalb County has a SoVI ® score of -0.409999996 which is in the 43.1 percentile for the nation.

Figure 2.3 shows how DeKalb County compares to the state in social vulnerability to environmental hazards. A high percentage indicates a higher vulnerability. Scores in the top 20 percent of the United States are more vulnerable counties (red) and scores in the bottom 20 percent of the United States indicate the least vulnerable counties (blue). DeKalb County's score the county is in the lowest category of vulnerability in relation to both state and national quantiles.

2.1.4 History

The Native Americans that lived in DeKalb County were the Kansa, Osage, and Missourians. They were nomadic people that were known to follow herds of large game species including buffalo, turkey, elk, bear and waterfowl. Numerous Native American artifacts have been discovered along Grindstone Creek. The first European settlers came to DeKalb County around 1839. The county's present boundaries were drawn on February 25, 1845. The county was named after American Revolution War Hero General Johann de Kalb. The City of Osborn was also founded that same year. Stewartville was platted in 1854 under the name of Tethetown, followed by Cameron in 1855. The Union Star post office has been open since 1863. The Village of Amity was platted in 1870. Clarksdale and Weatherby were both platted in 1885. Agriculture and two railroad lines played an important role in the county's growth in the late 1800s, but the use of motor cars and trucks made transporting people and livestock more efficient. The DeKalb County Historical Society was formed in 1969 to preserve the county's history and continues to maintain a museum and research center on the square in Maysville.

2.1.5 Occupations

Table 2.3 shows occupation statistics for the incorporated cities and the county.

Table 2.3. Occupation Statistics, DeKalb County, Missouri

| Place | Management, Business, Science, and Arts Occupations | Service Occupations | Sales and Office Occupations | Natural Resources, Construction, and Maintenance Occupations | Production, Transportation, and Material Moving Occupations |
|----------------------|---|---------------------|------------------------------|--|---|
| DeKalb County | 18.6% | 28.9% | 18.1% | 16.3% | 18% |
| Village of Amity | - | 51.4% | - | - | 48.6% |
| City of Clarksdale | 12.7% | 18.2% | 22.7% | 25% | 22% |
| City of Maysville | 11.4% | 34.3% | 21.3% | 12.9% | 20.1% |
| City of Osborn | 32.2% | 13% | 28.3% | 16.5% | 10% |
| City of Stewartville | 10.3% | 33.7% | 14.6% | 19.5% | 21.9% |
| City of Union Star | 3% | 43% | 7% | 23% | 20.1% |
| Village of Weatherby | 7.1% | - | 21.4% | 7.1% | 64.3% |

2.1.6 Agriculture

According to the USDA 2017 Census on Agriculture, DeKalb County has 708 farms with a total of

201,641 acres of farmland, compared with the 863 farms totaling 242,855 acres in reported in 2012, which is around a 17 percent decrease over the five-year reporting period. The neighboring counties farm acreage is as follows for 2017: Andrew County- 706 farms totaling 204,944 acres; Clinton and Buchanan County- 797 farms totaling 184,062 acres; and Clinton County- 684 farms totaling 222,361 acres. All those counties mentioned showed a decline in number of farms except Buchanan County, which saw a 10 percent increase from 2012 to 2017. The total market value of agricultural products sold in DeKalb was \$64,768,000 with \$42,354,000 (65 percent) coming from crops like grain, oilseeds, dry beans, and dry peas, and \$22,413,000 (35 percent) from livestock, poultry and other products with cattle and calves being the biggest producers, followed by sheep, goats, wool, mohair and milk. Other notable numbers from the 2017 Agriculture Census showed soybeans (51,430 acres), corn for grain (33,229 acres), forage (28,344 acres), wheat (572) and corn for silage or greenchop (164) as the top crops in the county. Cattle and calves led in the livestock inventory with 32,279 head, followed by sheep and lambs (644), goats (494), horses and ponies (325) and hogs and pigs (30). Of the 1,170 producers in the county, 289 were new and beginning farmers with 99 percent being white and 63 percent male. The 2016-2020 American Community Survey (ACS) 5-Year Estimates showed that 209 people were employed in agriculture, fishing and forestry operations, which is 2.6 percent of the DeKalb County workforce.

2.1.7 FEMA Hazard Mitigation Assistance (HMA) Grants in Planning Area

DeKalb County received small grant for road repairs (chip and seal) due to a severe ice storm that occurred in 2007.

Table 2.4. FEMA HMA Grants in County from 1993-2022

2.2 JURISDICTIONAL PROFILES AND MITIGATION CAPABILITIES

Individual profiles for each participating jurisdiction are included, along with discussion of previous mitigation initiatives in the planning area. A summary table follows the profiles that indicates specific capabilities of each jurisdiction that relate to their ability to implement mitigation opportunities. The unincorporated county is profiled first, followed by the incorporated communities and the public school districts.

2.2.1 Unincorporated DeKalb County

DeKalb County's jurisdiction includes all unincorporated areas within the county boundaries. The governing body of DeKalb County is the County Commission, which consists of three commissioners. The county departments include:

- Board of Supervisors or Board of Commissioners
 - Presiding Commissioner – Kyle Carroll
 - West District Commissioner – Kyle White
 - East District Commissioner – Chet Owen
- County Assessor
 - Tanya Zimmerman
- County Attorney
 - Eric Tate
- County Clerk
 - Melissa Meek
- County Recorder
 - JoAnn Marshall
- County Sheriff
 - Kasey Keesaman
- County Treasurer
 - Jessica Lee
- Emergency Management
 - Harold Allison
- General Services
- Tri-County Health Department (DeKalb, Gentry and Worth counties), Administrator
 - Teresa McDonald
- Medical Examiner
 - Heath Turner
- Public Administrator
 - Connie Bray
- Public Works
 - Bill Gray and Ben Routon

Mitigation Initiatives/Capabilities

The Emergency Management Director is responsible for:

- Planning, organizing and directing the county's emergency management plan with other government and business officials
- Speaking before various groups to promote interest and cooperation in emergency situations
- Advising and assisting businesses in industrial emergency management programs
- Meeting with state and federal officials to coordinate county program
- Preparing necessary documentation to affected agencies
- Planning and coordinating county's disaster drills

The EMD organizes the Local Emergency Planning Committee (LEPC) bi-annual meetings. **Table 2.6** lists mitigation capabilities for the unincorporated county.

Table 2.6. Unincorporated DeKalb County Mitigation Capabilities

| Capabilities | Status Including Date of Document or Policy |

2.2.2 Village of Amity

The Village of Amity is located near the center of DeKalb County on Route J. The 2016-2020 ACS 5-year Estimates show the population at 56 people. There is one outdoor warning siren that is activated locally. The village does not have Reverse 911. There is no staff, and the village relies on the county for emergency management, public safety and public education programs. The government consists of a five-member city council. There are no essential and critical facilities in town. No new infrastructure or facilities are anticipated over the next five years, nor is growth. **Table 2.7** lists the mitigation capabilities of the Village of Amity.

2.2.3 City of Clarksdale

Clarksdale is in southwestern DeKalb County on Missouri Route 6. The city has experienced a three-percent decrease in population since the 2010 census, according to the 2016-2020 ACS 5-Year Estimates, which showed a population of 263 people. There is one outdoor warning siren located on the water tower and remotely activated by the DeKalb County Sheriff’s Office. The community does not have Reverse 911 or any other type of warning system. The city employs three part-time staff which are the city clerk, city treasurer and water supervisor, and the city government consists of a mayor and four city council members. The city relies on the county for emergency management, public safety and public education programs, but it does distribute a monthly newsletter to residents with public education information topics. Volunteers also distributed Ready-In-Three materials at a community event in the spring as part of public outreach for updating the hazard mitigation plan. To keep residents safe during severe weather, the city passed a local mobile home anchoring ordinance in 2020. The city also completed updates to its water system and installed broadband since the last plan update. Because the community doesn’t have designated storm shelter space and there is an elderly housing complex in town, the community did apply for a FEMA grant for a storm shelter but was not granted the award. The community does participate in the NFIP, and the most common flooding issue is water seeping into basements. Essential and critical facilities include city hall, a fire department (not city-owned), senior housing, four churches, the water tower and a wastewater lift station. New infrastructure plans over the next five years include street resurfacing if the Community Development Block Grant (CDBG) application is successful, as some street and sidewalk conditions present a hazard for pedestrians and drivers. Sewer upgrades are also expected in the next five years. No new facilities or growth is expected over the next five years. **Table 2.8** lists the mitigation capabilities of the City of Clarksdale.

2.2.4 City of Maysville

The City of Maysville is centrally located in the county and serves as the county seat. Missouri Route 33 and Missouri Route 6 intersect the city. The population has experienced a 2.5 percent increase in population since 2010, according to the 2016-2020 ACS 5-Year Estimates, which showed a population of 1,142 people. There is one outdoor warning siren which is activated by the county sheriff's department. The city does not have Reverse 911 but has an emergency call system in place. The Methodist Church serves as a public tornado shelter, but it's unknown if the shelter is in accordance with FEMA standards. The city employs seven full-time staff (two water department staff, one public works staff, one policeman and two clerks) and one-part time code enforcement staff. The city relies on the county for emergency management and most public education programs. The city government consists of a mayor and city council. The major employers include the nursing home, school district, Independent Farmers Bank, (29 employees), BTC Bank (20 employees) and the courthouse (46 employees). The community does not participate in the NFIP and experiences minimal flooding issues. Essential and critical facilities include the courthouse, city hall, school, Methodist Church, fire station, nutrition center, nursing home, water treatment plant and assisted living facility. The nursing home has a backup generator. During the next five years, Maysville has plans to construct a new water line to the community from American Water in St. Joseph. **Table 2.9** lists the mitigation capabilities of Maysville.

2.2.5 City of Osborn

The City of Osborn is situated in southern DeKalb County, residing in both DeKalb and Clinton Counties, but primarily in DeKalb County. It's located just south of US Highway 36. The population has experienced a five percent decrease since 2010, according to the 2016-2020 ACS 5-year Estimates, which showed a population of 402 people. There is one outdoor warning siren that is manually activated by the local fire district. The city does not have Reverse 911 or any additional type of warning system. The city employs two full-time staff, city clerk and a water/sewer/maintenance person, and two part-time staff, back up operator and mowing/maintenance person. The city relies on the county for emergency management and public education programs. The city government consists of a mayor and a board of four alderman. The major employers include the Osborn School District (35 employees) United Cooperative (six employees) and Sur-Gro (five employees). The community does not participate in the NFIP and experiences minimal flooding issues. Essential and critical facilities include city hall, the school, Osborn Fire Station, water treatment plant and lagoons, as well as United Cooperative's Anhydrous plant. No new facilities or infrastructure is planned for the near future. The Osborn High School is located on the north end of town. **Table 2.10** lists the mitigation capabilities of Osborn.

2.2.6 City of Stewartsville

The City of Stewartsville is in southern DeKalb County, just south of US Highway 36. The population has experienced a nearly eight percent decrease since 2010, according to the 2016-2020 ACS 5-Year Estimates, which showed the population at 692. There are two outdoor warning sirens that are activated by the DeKalb County Sheriff's Office. The city does not have Reverse 911 or any other type of warning system, besides the outdoor warning siren. The city relies on the county for emergency management, public safety and most public education programs. The city government consists of a mayor and four aldermen. The largest employers are the school district, Fast Gas, Lawson Quick Stop and a Dollar General retail store. The community participates in the NFIP, and the city has an ordinance in place that requires potential builders to hire an engineer to ensure the structure is one foot above the floodplain. Essential and critical facilities include City Hall, the police and fire departments, a medical clinic and the high school. The Stewartsville High School is located on the west side of town. The city is looking into grant opportunities to renovate its park restrooms. **Table 2.11** lists the mitigation capabilities of Stewartsville.

2.2.7 City of Union Star

The City of Union Star is in northwestern DeKalb County on US Highway 169, and immediately west of the city limits lies Andrew County. The population has experienced a 27 percent increase since 2010, according to the ACS 5-Year Estimates, which showed the population at 555. There is one outdoor warning siren, providing full coverage of the community, that is manually activated by fire department personnel. The city does not have Reverse 911, public tornado shelters/safe rooms or any other type of warning system. The city employs one full-time staff, city clerk, and two part-time maintenance staff and relies on the county for emergency management, public safety and most public education programs. The city government consists of a mayor and four aldermen. The largest employers are the school district and bank. The community participates in the NFIP and experiences minimal flooding issues. Essential and critical facilities include City Hall, the fire department and the high school, located immediately north of the city. No new infrastructure, facilities or growth is expected during the next five years. However, there is interest in applying for a mitigation grant to purchase a generator to add redundancy to the town's sewer system if an opportunity arises. **Table 2.12** lists the mitigation capabilities of Union Star.

2.2.8 Village of Weatherby

The Village of Weatherby is situated in eastern DeKalb County, located on Missouri Route 6. The population decreased by 37 percent since 2010, according to the 2016-2020 ACS 5-Year Estimates, which showed the population at 67. There is one outdoor warning siren that is remotely activated by the county sheriff's department. The village does not have Reverse 911, a public tornado shelter or any additional type of warning system. The lack of public shelter for senior citizens is of particular concern to the community since 26 percent of the population is 60 years of age or older. The village has a part-time city clerk and relies on the county for emergency management and public education programs. The city government consists of a mayor and four city council members. The major employer is the post office. No new facilities or infrastructure is planned for the near future, nor is growth expected. **Table 2.13** lists the mitigation capabilities of the Village of Weatherby.

| 3.4.11 | Wildfire | 3.92 |

44 CFR Requirement §201.6(c)(2): [The plan shall include] A risk assessment that provides the factual basis for activities proposed in the strategy to reduce losses from identified hazards. Local risk assessments must provide sufficient information to enable the jurisdiction to identify and prioritize appropriate mitigation actions to reduce losses from identified hazards.

The goal of the risk assessment is to estimate the potential loss in the planning area, including loss of life, personal injury, property damage, and economic loss, from a hazard event. The risk assessment process allows communities and school/special districts in the planning area to better understand their potential risk to the identified hazards. It will provide a framework for developing and prioritizing mitigation actions to reduce risk from future hazard events.

Although this plan is an update from 2018, there has been minimal change of risk in the planning area.

This chapter is divided into four main parts:

- **Section 3.1 Hazard Identification** identifies the hazards that threaten the planning area and provides a factual basis for elimination of hazards from further consideration;
- **Section 3.2 Assets at Risk** provides the planning area's total exposure to natural hazards, considering critical facilities and other community assets at risk;
- **Section 3.3 Land Use and Development** discusses areas of planned future development;
- **Section 3.4 Hazard Profiles, Vulnerability and Problem Statements** provides more detailed information about the hazards impacting the planning area. For each hazard, there are three sections: 1) Hazard Profile provides a general description and discusses the threat to the planning area, the geographic location at risk, potential severity/magnitude/extent, previous occurrences of hazard events, probability of future occurrence, risk summary by jurisdiction, impact of future development on the risk; 2) Vulnerability Assessment further defines and quantifies populations, buildings, critical facilities, and other community/school or special district assets at risk to natural hazards; and 3) Problem Statement briefly summarizes the problem and develops possible solutions.

3.1 HAZARD IDENTIFICATION

Requirement §201.6(c)(2)(i): [The risk assessment shall include a] description of the type...of all natural hazards that can affect the jurisdiction.

The plan profiles all natural hazards that can affect DeKalb County. The natural hazards that can affect the county have been identified in the 2018 DeKalb County Hazard Mitigation Plan and the 2018 Missouri State Plan. Natural hazards are naturally occurring climatological, hydrological or geologic events that have a negative effect on people and the built environment. Technological hazards refer to hazards that stem from technological or industrial conditions that can include hazardous materials events, national security hazards, power failure, telecommunications failure, etc. Only natural hazards are included.

3.1.1 Review of Existing Mitigation Plans

The MPC reviewed the hazards identified in the previously approved plan, as well as the hazards identified in the most recent state plan.

In Missouri, local plans customarily include only natural hazards, as only natural hazards are required by federal regulations to be included. While some counties have included public emergencies in plan updates in light of the COVID pandemic, the MPC decided to continue to include only natural hazards at this time and wait to see how the state plan presents public emergencies in its next update. More committee members expressed interest in adding cybersecurity as a hazard rather than public emergencies, but they decided to keep the same hazards as 2018 for this plan update.

3.1.2 Review Disaster Declaration History

Federal and/or state declarations may be granted when the severity and magnitude of an event surpasses the ability of the local government to respond and recover. Disaster assistance is supplemental and sequential. When the local government's capacity has been surpassed, a state disaster declaration may be issued, allowing for the provision of state assistance. If the disaster is so severe that both the local and state governments' capacities are exceeded; a federal emergency or disaster declaration may be issued allowing for the provision of federal assistance.

FEMA also issues emergency declarations, which are more limited in scope and do not include the long-term federal recovery programs of major disaster declarations. **Table 3.1** lists the federal FEMA disaster declarations that included the planning area from 1965 to present.

Table 3.1. FEMA Disaster Declarations that included DeKalb County, Missouri, 1965-Present

| Disaster Number | Description | Declaration Date Incident Period | Individual Assistance (IA) Public Assistance (PA) |
|-----------------|-----------------------------------|--|--|
| DR-203-MO | Severe Storms & Flooding | July 27, 1965 July 27, 1965 | |

3.1.3 Research Additional Sources

List the additional sources of data on locations and past impacts of hazards in the planning area:

- Missouri Hazard Mitigation Plans (2010, 2013, and 2018)
- Previously approved planning area Hazard Mitigation Plan (October 4, 2018)
- Federal Emergency Management Agency (FEMA)
- Missouri Department of Natural Resources
- National Drought Mitigation Center Drought Reporter

- US Department of Agriculture's (USDA) Risk Management Agency Crop Insurance Statistics
- National Agricultural Statistics Service (Agriculture production/losses)
- Data Collection Questionnaires completed by each jurisdiction
- State of Missouri GIS data
- Environmental Protection Agency
- Flood Insurance Administration
- Hazards US (Hazus)
- Missouri Department of Transportation
- Missouri Division of Fire Marshal Safety
- Missouri Public Service Commission
- National Fire Incident Reporting System (NFIRS)
- National Oceanic and Atmospheric Administration's (NOAA) National Centers for Environmental Information (NCEI);
- County and local Comprehensive Plans to the extent available
- County Emergency Management
- County Flood Insurance Rate Map, FEMA
- Flood Insurance Study, FEMA
- SILVIS Lab, Department of Forest Ecology and Management, University of Wisconsin
- U.S. Army Corps of Engineers
- U.S. Department of Transportation
- United States Geological Survey (USGS)
- Various articles and publications available on the internet (you should state that you will give citations to the sources in the body of the plan)

The only centralized source of data for many of the weather-related hazards is the National Oceanic and Atmospheric Administration's (NOAA) National Centers for Environmental Information (NCEI). Although it is usually the best and most current source, there are limitations to the data which should be noted. The NCEI documents the occurrence of storms and other significant weather phenomena having sufficient intensity to cause loss of life, injuries, significant property damage, and/or disruption to commerce. In addition, it is a partial record of other significant meteorological events, such as record maximum or minimum temperatures or precipitation that occurs in connection with another event. Some information appearing in the NCEI may be provided by or gathered from sources outside the National Weather Service (NWS), such as the media, law enforcement and/or other government agencies, private companies, individuals, etc. An effort is made to use the best available information but because of time and resource constraints, information from these sources may be unverified by the NWS. Those using information from NCEI should be cautious as the NWS does not guarantee the accuracy or validity of the information.

The NCEI damage amounts are estimates received from a variety of sources, including those listed above in the Data Sources section. For damage amounts, the NWS makes a best guess using all available data at the time of the publication. Property and crop damage figures should be considered as a broad estimate. Damages reported are in dollar values as they existed at the time of the storm event. They do not represent current dollar values.

The database currently contains data from January 1950 to March 2014, as entered by the NWS. Due to changes in the data collection and processing procedures over time, there are unique

periods of record available depending on the event type. The following timelines show the different time spans for each period of unique data collection and processing procedures.

1. Tornado: From 1950 through 1954, only tornado events were recorded.
2. Tornado, Thunderstorm Wind and Hail: From 1955 through 1992, only tornado, thunderstorm wind and hail events were keyed from the paper publications into digital data. From 1993 to 1995, only tornado, thunderstorm wind and hail events have been extracted from the Unformatted Text Files.
3. All Event Types (48 from Directive 10-1605): From 1996 to present, 48 event types are recorded as defined in NWS Directive 10-1605.

Injuries and deaths caused by a storm event are reported on an area-wide basis. With NCEI data, a death or injury listed in connection with that county search did not necessarily occur in that county.

3.1.4 Hazards Identified

The hazards that significantly impact the planning area are listed below and were chosen for further analysis in alphabetical order. Not all hazards impact every jurisdiction. The symbol “x” indicates the jurisdiction is impacted by the hazard, and a “-” indicates the hazard is not applicable to that jurisdiction.

Table 3.2. Hazards Identified for Each Jurisdiction

| Jurisdiction | Dam Failure | Drought | Earthquake | Extreme Temperatures | Flooding (River and Flash) | Land Subsidence/Sinkholes | Levee Failure | Severe Winter Weather | Thunderstorm/Lightning/Hail/High Wind | Tornado | Wildfire |
|-------------------------------|-------------|---------|------------|----------------------|----------------------------|---------------------------|---------------|-----------------------|---------------------------------------|---------|----------|
| DeKalb County | X | X | X | X | X | - | - | X | X | X | X |

| City of Union Star | X | X | X | X | X | - | - | X | X | X | X |
| Village of Weatherby | - | X | X | X | - | - | - | X | X | X | x |
| Maysville School District | X | X | X | X | X | - | - | X | X | X | X |
| Osborn School District | X | X | X | X | X | - | - | X | X | X | X |
| Stewartsville School District | X | X | X | X | X | - | - | X | X | X | X |
| Union Star School District | X | X | X | X | X | - | - | X | X | X | X |

3.1.5 Multi-Jurisdictional Risk Assessment

The risk assessment evaluates each participating jurisdiction's vulnerability to each hazard that can affect the planning area. Many of the hazards identified in the risk assessment have the same probability of occurrence throughout the planning area. The hazards that vary across the planning area in terms of risk include dam failure, structural or wildland fire, riverine flood and flash flood. These differences are detailed in each hazard profile under geographic location and vulnerability. DeKalb County is fairly uniform in terms of climate, topography, and building construction characteristics.

3.2 ASSETS AT RISK

This section assesses the planning area population, structures, critical facilities and infrastructure, and other important assets that may be at risk to hazards. The inventory of assets for each jurisdiction were derived from parcel data from the DeKalb County structures dataset downloaded from Missouri Spatial Data Information Service (MSDIS), local jurisdiction data collection questionnaires, and HAZUS MH 4.2. There have not been significant changes to the planning area since the previous hazard mitigation plan.

3.2.1 Total Exposure of Population and Structures

Unincorporated County and Incorporated Cities

In the following three tables, population data is based on 2020 Census Bureau data. Building counts and building exposure values are based on parcel data developed by the State of Missouri Geographic Information Systems (GIS) database. This data, organized by County, is available on Google Drive through the following link:

<https://drive.google.com/drive/folders/1Fug9DJriBNIBrcsf6Bki1iQ2wWa1w8uk>. Contents exposure values were calculated by factoring a multiplier to the building exposure values based on usage type. The multipliers were derived from the Hazus and are defined below in **Table 3.3**. Land values have been purposely excluded from consideration because land remains following disasters, and subsequent market devaluations are frequently short term and difficult to quantify. Another reason for excluding land values is that state and federal disaster assistance programs generally do not address loss of land (other than crop insurance). It should be noted that the total valuation of buildings is based on county assessors' data which may not be current. In addition, government-owned properties are usually taxed differently or not at all, and so may not be an accurate representation of true value. Public school district assets and special districts assets are included in the total exposure tables assets by community and county.

Table 3.3 shows the total population, building count, estimated value of buildings, estimated value of contents and estimated total exposure to parcels for the unincorporated county and each incorporated city. For multi-county communities, the population and building data may include data on assets located outside the planning area.

Table 3.4 that follows provides the building value exposures for the county and each city in the planning area broken down by usage type.

Table 3.5 provides the building count total for the county and each city in the planning area broken out by building usage types (residential, commercial, industrial, and agricultural).

Table 3.3. Maximum Population and Building Exposure by Jurisdiction

| Jurisdiction | 2020 Decennial Census | Building Count | Building Exposure (\$) | Contents Exposure (\$) | Total Exposure (\$) |
|----------------------------|-----------------------|----------------|------------------------|------------------------|---------------------|
| Village of Amity | 26 | 32 | \$5,246,000 | \$2,623,000 | \$7,869,000 |
| City of Clarksdale | 245 | 149 | \$23,439,000 | \$12,593,000 | \$36,032,000 |
| City of Maysville | 1,095 | 499 | \$79,369,000 | \$41,971,000 | \$121,340,000 |
| City of Osborn | 374 | 206 | \$29,771,000 | \$15,276,000 | \$45,047,000 |
| City of Stewartsville | 733 | 317 | \$50,994,000 | \$27,493,000 | \$78,487,000 |
| City of Union Star | 380 | 221 | \$32,850,000 | \$16,648,000 | \$49,498,000 |
| Village of Weatherby | 80 | 54 | \$8,716,000 | \$4,371,000 | \$13,087,000 |
| Unincorporated and Cameron | 8,096 | 6,863 | \$471,477,000 | \$208,152,000 | \$724,669,000 |
| Totals | 11,029 | 8,341 | \$701,862,000 | \$374,167,000 | \$1,076,029,000 |

Source: U.S. Bureau of the Census, 2020 Decennial Census; Building Count and Building Exposure, Missouri GIS Database from SEMA Mitigation Management; Contents Exposure derived by applying multiplier to Building Exposure based on Hazus MH 2.1 standard contents multipliers per usage type as follows: Residential (50%), Commercial (100%), Industrial (150%), Agricultural (100%). For purposes of these calculations, government, school, and utility were calculated at the commercial contents rate.

Table 3.4. Building Values/Exposure by Usage Type

| Jurisdiction | Residential | Commercial | Industrial | Agricultural | Government & Education | Total |
|----------------------------|---------------|--------------|-------------|--------------|------------------------|---------------|
| Village of Amity | \$5,246,000 | \$0 | \$0 | \$0 | \$0 | \$5,246,000 |
| City of Clarksdale | \$21,639,000 | \$1,774,000 | \$0 | \$26,000 | \$0 | \$23,439,000 |
| City of Maysville | \$70,982,000 | \$6,290,000 | \$0 | \$74,000 | \$2,023,000 | \$79,369,000 |
| City of Osborn | \$27,540,000 | \$1,451,000 | \$0 | \$113,000 | \$665,000 | \$29,769,000 |
| City of Stewartsville | \$45,737,000 | \$4,516,000 | \$0 | \$22,000 | \$720,000 | \$50,995,000 |
| City of Union Star | \$30,983,000 | \$1,129,000 | \$0 | \$100,000 | \$638,000 | \$32,850,000 |
| Village of Weatherby | \$8,688,000 | \$0 | \$0 | \$0 | \$27,000 | \$8,715,000 |
| Unincorporated and Cameron | \$397,040,000 | \$44,672,000 | \$2,862,000 | \$39,718,000 | \$6,303,000 | \$471,479,000 |
| Totals | \$607,855,000 | \$59,832,000 | \$2,862,000 | \$40,053,000 | \$10,376,000 | \$701,862,000 |

Source: Missouri GIS Database, SEMA Mitigation Management Section; Public School Districts and Special Districts

Even though schools and special districts' total assets are included in the tables above, additional discussion is needed, based on the data that is available from the districts' completion of the Data Collection Questionnaire and district-maintained websites. The number of enrolled students at the participating public school districts is provided in **Table 3.6** below. Additional information includes the number of buildings, building values (building exposure) and contents value (contents exposure). These numbers will represent the total enrollment and building count for the public school districts regardless of the county in which they are located.

Table 3.6. Population and Building Exposure by Jurisdiction-Public School Districts

| Public School District | Enrollment | Building Count | Building Exposure (\$) | Contents Exposure (\$) | Total Exposure (\$) |
|-------------------------------|------------|----------------|------------------------|------------------------|---------------------|
| Maysville School District | 564 | 10 | \$18,637,268.00 | \$6,651,032.00 | \$25,288,300.00 |
| Osborn School District | 124 | 2 | | | |
| Stewartsville School District | 232 | 1 | \$2,500,00 | \$10,000,000 | \$12,500,000 |
| Union Star School District | 144 | 1 | \$1,000,000 | \$8,113,843 | \$9,113,843 |

Source: <https://dese.mo.gov/school-data>, select the file for the most recent year called "20xx Building Enrollment PK-12", filter the spreadsheet by selecting only the public school districts in the planning area. The Building Exposure, Contents Exposure, and Total Exposure amounts come from the completed Data Collection Questionnaires from Public School Districts. In general, the school districts obtain this information from their insurance coverage amounts.

3.2.2 Critical and Essential Facilities and Infrastructure

This section will include information from the Data Collection Questionnaire and other sources concerning the vulnerability of participating jurisdictions' critical, essential, high potential loss, and transportation/lifeline facilities to identified hazards. Definitions of each of these types of facilities are provided below.

- Critical Facility: Those facilities essential in providing utility or direction either during the response to an emergency or during the recovery operation.
- Essential Facility: Those facilities that if damaged, would have devastating impacts on disaster response and/or recovery.
- High Potential Loss Facilities: Those facilities that would have a high loss or impact on the community.
- Transportation and lifeline facilities: Those facilities and infrastructure critical to transportation, communications, and necessary utilities.

Table 3.7 includes a summary of the inventory of critical and essential facilities and infrastructure in the planning area. The list was compiled from the Data Collection Questionnaire as well as the following sources:

- 2018 Missouri State Hazard Mitigation Plan and Hazard Mitigation Viewer
- Files from the Emergency Management Director, including Chemical Facilities (Tier II Facilities) information
- Hazus MH 4.2
- Meetings with city councils, boards and agencies

Table 3.7. Inventory of Critical/Essential Facilities and Infrastructure by Jurisdiction

| Jurisdiction | Airport Facility | Bus Facility | Childcare Facility | Communications Tower | Electric Power Facility | Emergency Operations | Fire Service | Government | Housing | Shelters | Highway Bridge | Hospital/Health Care | Military | Natural Gas Facility | Nursing Homes | Police Station | Potable Water Facility | Rail | Sanitary Pump Stations | School Facilities | Stormwater Pump Stations | Tier II Chemical Facility | Wastewater Facility | TOTAL | |

Source: Missouri 2018 State Hazard Mitigation Plan and Hazard Mitigation Viewer; Data Collection Questionnaires; Hazus MH 4.2, etc.

According to information provided by the Federal Highway Administration through its National Bridge Inventory, <http://www.fhwa.dot.gov/bridge/nbi/no10/county.cfm>, DeKalb County has 238 bridges, with 92 rated in good condition, 135 rated as fair, and 11 rated as poor.

The term “scour critical” refers to one of the database elements in the National Bridge Inventory. This element is quantified using a “scour index,” which is a number indicating the vulnerability of a bridge to scour during a flood. Bridges with a scour index between 1 and 3 are considered “scour critical,” or a bridge with a foundation determined to be unstable for the observed or evaluated scour condition. According to the 2018 State Plan, there are five state scour critical bridges identified in DeKalb County.

Figure 3.1. DeKalb County Bridges

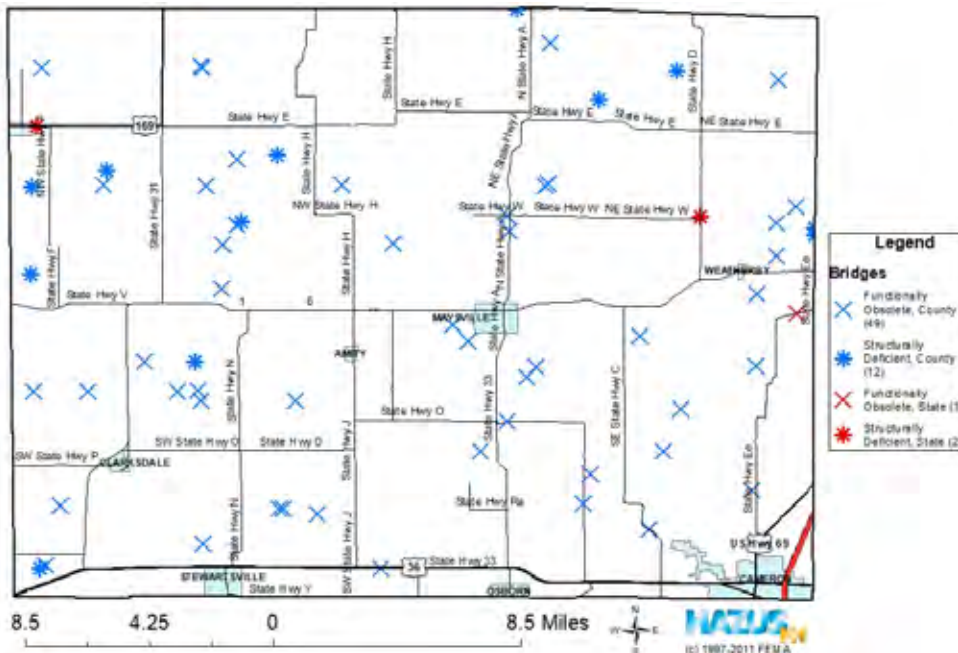

Figure 3.2. DeKalb County Structurally Deficient Bridges

3.2.3 Other Assets

Assessing the vulnerability of the planning area to disaster also requires data on the natural, historic, cultural, and economic assets of the area. This information is important for many reasons.

- These types of resources warrant a greater degree of protection due to their unique and irreplaceable nature and contribution to the overall economy.
- Knowing about these resources in advance allows for consideration immediately following a hazard event, which is when the potential for damages is higher.
- The rules for reconstruction, restoration, rehabilitation, and/or replacement are often different for these types of designated resources.
- The presence of natural resources can reduce the impacts of future natural hazards, such as wetlands and riparian habitats which help absorb floodwaters.
- Losses to economic assets like these (e.g., major employers or primary economic sectors) could have severe impacts on a community and its ability to recover from disaster.

Specific natural, historic, cultural, and economic assets in the planning area, are included below.

Threatened and Endangered Species: Table 3.8 shows Federally Threatened, Endangered, Proposed and Candidate Species in the county.

Table 3.8. Threatened and Endangered Species in DeKalb County

| Common Name | Scientific Name | Status |
|-------------------------|-------------------------------|------------|
| Indiana Bat | <i>Myotis sodalis</i> | Endangered |
| Northern Long-eared Bat | <i>Myotis septentrionalis</i> | Threatened |
| Monarch Butterfly | <i>Danaus plexippus</i> | Candidate |

Historic Resources: The National Register of Historic Places is the official list of registered cultural resources worthy of preservation. It was authorized under the National Historic Preservation Act of 1966 as part of a national program. The purpose of the program is to coordinate and support public and private efforts to identify, evaluate, and protect our historic and archeological resources. The National Register is administered by the National Park Service under the Secretary of the Interior. Properties listed in the National Register include districts, sites, buildings, structures and objects that are significant in American history, architecture, archeology, engineering, and culture.

Table 3.10 lists properties in DeKalb County that are on the National Register of Historic Places.

Table 3.10. DeKalb County Properties on the National Register of Historic Places

Agriculture: Agriculture has traditionally been an important part of the county’s economy. According to the 2017 Census of Agriculture, crop and livestock sales are in excess of \$64,768,000 and 1,170 people are employed as farmers or farm hands in DeKalb County, up from 434 people in the 2012 Ag Census.

3.3 LAND USE AND DEVELOPMENT

3.3.1 Development Since Previous Plan Update

The overall population in DeKalb County has declined significantly in the last decade. The largest population decline is in the City of Cameron area, which is participating in the Clinton County plan. However, most of the other communities have also experienced population decline. Table 3.12 shows the population growth statistics for all cities in DeKalb County as well as the county as a whole

Table 3.12. County Population Growth, 2010-2020

| Jurisdiction | Total Population 2010 | Total Population 2020 | 2010-2020 # Change | 2000-2020 % Change |
|-----------------------------|-----------------------|-----------------------|--------------------|--------------------|
| Amity | 54 | 26 | -28 | -51.85% |
| Clarksdale | 271 | 245 | -26 | -9.59% |
| Maysville | 1,114 | 1,095 | -19 | -1.70% |

| Unincorporated and Cameron* | 9736 | 8096 | -1640 | -16.84% |
| Totals | 12,892 | 11,029 | -1,863 | -14.45% |

Source: U.S. Bureau of the Census, Decennial Census, Annual Population Estimates, American Community Survey 5-year Estimates; Population Statistics are for entire incorporated areas as reported by the Census bureau

Population growth or decline is generally accompanied by increases or decreases in the number of housing units, but as demonstrated below, this is not always the case. While Unincorporated DeKalb County and Cameron had stable housing levels, this was where the greatest decline occurred. On average this section of the county went from having an average of 3.4 residents per household to 2.82, which could indicate a decline in family sizes. Overall, the county the percentage of occupied housing versus vacant housing remained relatively the same with only about 10% of houses in county recorded as vacant between 2010 and 2020 Census. Table 3.15 shows the change in numbers of housing units in the planning area from 2010 to 2020.

Table 3.13. Change in Housing Units, 2010-2020

| Jurisdiction | Housing Units 2010 | Housing Units 2020 | 2010-2020 # Change | 2000-2020 % Change |
|-----------------------------|--------------------|--------------------|--------------------|--------------------|
| Amity | 31 | 24 | -7 | -18.91% |
| Clarksdale | 145 | 130 | -15 | -10.34% |
| Maysville | 496 | 479 | -17 | -3.42% |
| Osborn | 209 | 193 | -16 | -7.65% |
| Stewartsville | 320 | 329 | 9 | 2.81% |
| Union Star | 203 | 191 | -12 | -5.91% |

| Totals | 4,329 | 4,264 | -65 | -1.50% |

Source: U.S. Bureau of the Census, Decennial Census, American Community Survey 5-year Estimates; Population Statistics are for entire incorporated areas as reported by the U.S. Census Bureau

DeKalb County

DeKalb County consists of nine townships. Highway 36 runs through three townships—Colfax, Grand River and Washington—with zoning regulation. The county population has decreased 16.84 percent since 2010, with every community experiencing population decline and unincorporated DeKalb County and the Cameron area (Cameron is participating in Clinton County’s plan) experiencing the largest decline.

One significant change that would have attributed to the population decline in the Cameron area is the closing of the Crossroads Correctional Center state Prison in the community. After the facility, which housed up to 1,440 inmates that were all included in local population counts, closed in 2019, DeKalb experienced the largest percentage population decline in the state for the 2020 Census.

(Source: https://www.newspressnow.com/news/local_news/government/downward-trend-report-points-to-population-loss/article_cfd9ec8a-cf9a-11eb-a4f4-8fb776e2404c.html)

Overall, the county’s risk to natural hazard remains the same as in the 2018 plan.

Village of Amity

Amity has experienced a 51.85 percent population decrease since 2010. The community’s risk to natural hazards remains the same as in the 2018 plan.

City of Clarksdale

Clarksdale has experienced a 10.34 percent population decrease since 2010. The community’s risk to natural hazards remains the same as in the 2018 plan.

City of Maysville

Maysville has experienced a 10 percent population decrease since 2000. The community’s risk to natural hazards remains the same as in the 2018 plan.

3.3.2 Future Land Use and Development

The remaining discussion in this section provides future growth and development information, where available, relative to each participating jurisdiction.

DeKalb County

DeKalb County has a comprehensive plan. No future development is anticipated.

Village of Amity

The village does not have a comprehensive plan or land use plan. No future development is anticipated.

City of Clarksdale

The community does not have a comprehensive plan or land use plan. Clarksdale made water system improvements in 2021 with new water lines for the whole town and now has broadband in place. They received a grant in 2022 for road and drainage improvements and looking into constructing a safe room.

City of Maysville

The community does not have a comprehensive plan or land use plan. The city is currently working with the Great Northwest Wholesale Water Commission and USDA to get a new water connection source from Missouri American Water in St. Joseph.

City of Osborn

The community does not have a comprehensive plan or land use plan. No significant future development is anticipated.

City of Stewartville

The community does not have a comprehensive plan or land use plan. No significant future development is anticipated.

City of Union Star

The community does not have a comprehensive plan or land use plan. The received a grant in 2022 for road and drainage improvements. No future development is anticipated.

Village of Weatherby

The community does not have a comprehensive plan or land use plan. No future development is anticipated.

School District's Future Development

Maysville School District

The school district expects enrollment to remain stable over the next five years with no new planned construction.

Osborn School District

The school district expects enrollment to remain stable over the next five years. The district has plans to tear down a building at the northwest corner of the property and rebuild a larger building in the same location.

Stewartville School District

The school district does not foresee any major changes in enrollment.

Union Star School District

Little change in enrollment is expected over the next five years. There are no planned construction or remodeling activities.

3.4 HAZARD PROFILES, VULNERABILITY, AND PROBLEM STATEMENTS

Each hazard will be analyzed individually in a hazard profile. The profile will consist of a general hazard description, location, strength/magnitude/extent, previous events, future probability, a discussion of risk variations between jurisdictions, and how anticipated development could impact risk. At the end of each hazard profile will be a vulnerability assessment, followed by a summary problem statement.

Hazard Profiles

Requirement §201.6(c)(2)(i): [The risk assessment shall include a] description of the...location and extent of all natural hazards that can affect the jurisdiction. The plan shall include information on previous occurrences of hazard events and on the probability of future hazard events.

Each hazard identified in Section 3.4 will be profiled individually in this section. The level of information presented in the profiles will vary by hazard based on the information available. With each update of this plan, new information will be incorporated to provide better evaluation and prioritization of the hazards that affect the planning area. Detailed profiles for each of the identified hazards include information categorized as follows:

- **Hazard Description:** This section consists of a general description of the hazard and the types of impacts it may have on a community or school/special district.
- **Geographic Location:** This section describes the geographic areas in the planning area that are affected by the hazard. Where available, use maps to indicate the specific locations of the planning area that are vulnerable to the subject hazard. For some hazards, the entire planning area is at risk.
- **Strength/Magnitude/Extent:** This includes information about the strength, magnitude, and extent of a hazard. For some hazards, this is accomplished with description of a value on an established scientific scale or measurement system, such as an EF2 tornado on the Enhanced Fujita Scale. This section should also include information on the typical or expected strength/magnitude/extent of the hazard in the planning area. Strength, magnitude, and extent can also include the speed of onset and the duration of hazard events. Describing the strength/magnitude/extent of a hazard is not the same as describing its potential impacts on a community. Strength/magnitude/extent defines the characteristics of the hazard regardless of the people and property it affects.
- **Previous Occurrences:** This section includes available information on historic incidents and their impacts. Historic event records form a solid basis for probability calculations.
- **Probability of Future Occurrence:** The frequency of recorded past events is used to estimate the likelihood of future occurrences. Probability can be determined by dividing the number of recorded events by the number of years of available data and multiplying by 100. This gives the percent chance of the event happening in any given year. For events occurring more than once annually, the probability should be reported as 100% in any given year, with a statement of the average number of events annually. For hazards such as drought that may have gradual onset and extended duration, probability can be based on the number of months in

drought in a given time-period and expressed as the probability for any given month to be in drought.

- **Changing Future Conditions Considerations:**

In addition to the probability of future occurrence, changing future conditions should also be considered, including the effects of long-term changes in weather patterns and climate on the identified hazards. NOAA has a new tool that can provide useful information for this purpose. NOAA Climate Explorer, <https://toolkit.climate.gov/tools/climate-explorer>

Vulnerability Assessments

Requirement §201.6(c)(2)(ii) :[The risk assessment shall include a] description of the jurisdiction’s vulnerability to the hazards described in paragraph (c)(2)(i) of this section. This description shall include an overall summary of each hazard and its impact on the community.

Requirement §201.6(c)(2)(ii)(A) :The plan should describe vulnerability in terms of the types and numbers of existing and future buildings, infrastructure, and critical facilities located in the identified hazard areas.

Requirement §201.6(c)(2)(ii)(B) :[The plan should describe vulnerability in terms of an] estimate of the potential dollar losses to vulnerable structures identified in paragraph (c)(2)(i)(A) of this section and a description of the methodology used to prepare the estimate.

Requirement §201.6(c)(2)(ii)(C): [The plan should describe vulnerability in terms of] providing a general description of land uses and development trends within the community so that mitigation options can be considered in future land use decisions.

Requirement §201.6(c)(2)(ii): (As of October 1, 2008) [The risk assessment] must also address National Flood Insurance Program (NFIP) insured structures that have been repetitively damaged in floods.

Following the hazard profile for each hazard will be the vulnerability assessment. The vulnerability assessment further defines and quantifies populations, buildings, critical facilities, and other community assets at risk to damages from natural hazards. The vulnerability assessments should be based on the best available data. The vulnerability assessments can also be based on data that was collected for the 2018 State Hazard Mitigation Plan Update. With the 2018 Hazard Mitigation Plan Update, SEMA is pleased to provide online access to the risk assessment data and associated mapping for the 114 counties in the State, including the independent City of St. Louis. Through the web-based Missouri Hazard Mitigation Viewer, local planners or other interested parties can obtain all State Plan datasets. This effort removes from local mitigation planners a barrier to performing all the needed local risk assessments by providing the data developed during the 2018 State Plan Update.

The Missouri Hazard Mitigation Viewer includes a Map Viewer with a legend of clearly labeled features, a north arrow, a base map that is either aerial imagery or a street map, risk assessment data symbolized the same as in the 2018 State Plan for easy reference, search and query capabilities, ability to zoom to county level data and capability to download PDF format maps. The Missouri Hazard Mitigation Viewer can be found at this link: <http://bit.ly/MoHazardMitigationPlanViewer2018>.

The vulnerability assessments in the DeKalb County plan will also be based on:

- Written descriptions of assets and risks provided by participating jurisdictions;

- Existing plans and reports;
- Personal interviews with planning committee members and other stakeholders; and
- Other sources as cited.

Within the Vulnerability Assessment, the following sub-headings will be addressed:

Vulnerability Overview:

The plan will provide an overall summary of each jurisdiction’s vulnerability to the identified hazards. The overall summary of vulnerability identifies structures, systems, populations or other community assets as defined by the community that are susceptible to damage and loss for hazard events.

Potential Losses to Existing Development:

For each participating jurisdiction, the plan describes the potential impacts of the hazard. Impact means the consequences of effect of the hazard on the jurisdiction and its assets. Assets are determined by the community and include, for example, people, structures, facilities, systems, capabilities, and/or activities that have value to the community. For example, impacts could be described by referencing historical disaster impacts and/or an estimate of potential future losses.

Previous and Future Development:

This section includes information on how changes in development have impacted the community’s vulnerability to this hazard. Changes in development that occurred in known hazard prone areas since the previous plan may increase or decrease the community’s vulnerability. Any anticipated future development in the county is also identified, and how that would impact hazard risk in the planning area.

Hazard Summary by Jurisdiction:

For hazard risks that vary by jurisdiction, this section will provide an overview of the variation and the factual basis for that variation.

Problem Statements

Each hazard analysis concludes with a brief summary of the problems created by the hazard in the planning area, and possible ways to resolve those problems. Jurisdiction-specific information will be included in those cases where the risk varies across the planning area. The focus of the problem statements sub-section is to synthesize the “problems” revealed through the risk assessment and then through the process of updating the mitigation strategy, develop mitigation actions that are aimed at “solving” the identified problems. Problem statements will be as specific as possible; relating to specific jurisdictions as well as specific assets or areas of the planning area that are problematic.

3.4.1 Flooding (Riverine and Flash)

Hazard Profile

Hazard Description

A flood is partial or complete inundation of normally dry land areas. Riverine flooding is defined as the overflow of rivers, streams, drains, and lakes due to excessive rainfall, rapid snowmelt, or ice. There are several types of riverine floods, including headwater, backwater, interior drainage, and flash flooding. Riverine flooding is defined as the overflow of rivers, streams, drains, and lakes due to excessive rainfall, rapid snowmelt or ice melt. The areas adjacent to rivers and stream banks that carry excess floodwater during rapid runoff are called floodplains. A floodplain is defined as the lowland and relatively flat area adjoining a river or stream. The terms “base flood” and “100- year flood” refer to the area in the floodplain that is subject to a one percent or greater chance of flooding in any given year. Floodplains are part of a larger entity called a basin, which is defined as all the

Sections 3.4.2 and 3.4.3 will discuss flooding caused by levee or dam failure, so those hazards will not be addressed in this section.

A flash flood occurs when water levels rise at an extremely fast rate as a result of intense rainfall over a brief period, sometimes combined with rapid snowmelt, ice jam release, frozen ground, saturated soil, or impermeable surfaces. Flash flooding can happen in Special Flood Hazard Areas (SFHAs) as delineated by the National Flood Insurance Program (NFIP) and can also happen in areas not associated with floodplains.

Ice jam flooding is a form of flash flooding that occurs when ice breaks up in moving waterways, and then stacks on itself where channels narrow. This creates a natural dam, often causing flooding within minutes of the dam formation.

In some cases, flooding may not be directly attributable to a river, stream, or lake overflowing its banks. Rather, it may simply be the combination of excessive rainfall or snowmelt, saturated ground, and inadequate drainage. With no place to go, the water will find the lowest elevations – areas that are often not in a floodplain. This type of flooding, often referred to as sheet flooding, is becoming increasingly prevalent as development outstrips the ability of the drainage infrastructure to properly carry and disburse the water flow.

Most flash flooding is caused by slow-moving thunderstorms or thunderstorms repeatedly moving over the same area. Flash flooding is a dangerous form of flooding which can reach full peak in only a few minutes. Rapid onset allows little or no time for protective measures. Flash flood waters move at very fast speeds and can move boulders, tear out trees, scour channels, destroy buildings, and obliterate bridges. Flash flooding can result in higher loss of life, both human and animal, than slower developing river and stream flooding.

In certain areas, aging storm sewer systems are not designed to carry the capacity currently needed to handle the increased storm runoff. Typically, the result is water backing into basements, which damages mechanical systems and can create serious public health and safety concerns. This combined with rainfall trends and rainfall extremes all demonstrate the high probability, yet generally unpredictable nature of flash flooding in the planning area.

Although flash floods are somewhat unpredictable, there are factors that can point to the likelihood of flash floods occurring. Weather surveillance radar is being used to improve monitoring capabilities of intense rainfall. This, along with knowledge of the watershed characteristics, modeling techniques, monitoring, and advanced warning systems has increased the warning time for flash floods.

Geographic Location

Riverine flooding is most likely to occur in SFHAs. Maps in **Figures 3.3 to 3.8** show SFHAs for DeKalb County and jurisdictions that have a 100-year floodplain in their city limits. The 100-year floodplain boundaries are based on Hazus MH 4.2, which closely, but not completely, follows the preliminary Flood Insurance Rate Maps (FIRMs). According to these maps, no schools or critical facilities are located in SFHAs.

Figure 3.3. DeKalb County 100-Year Floodplain with Critical Facilities

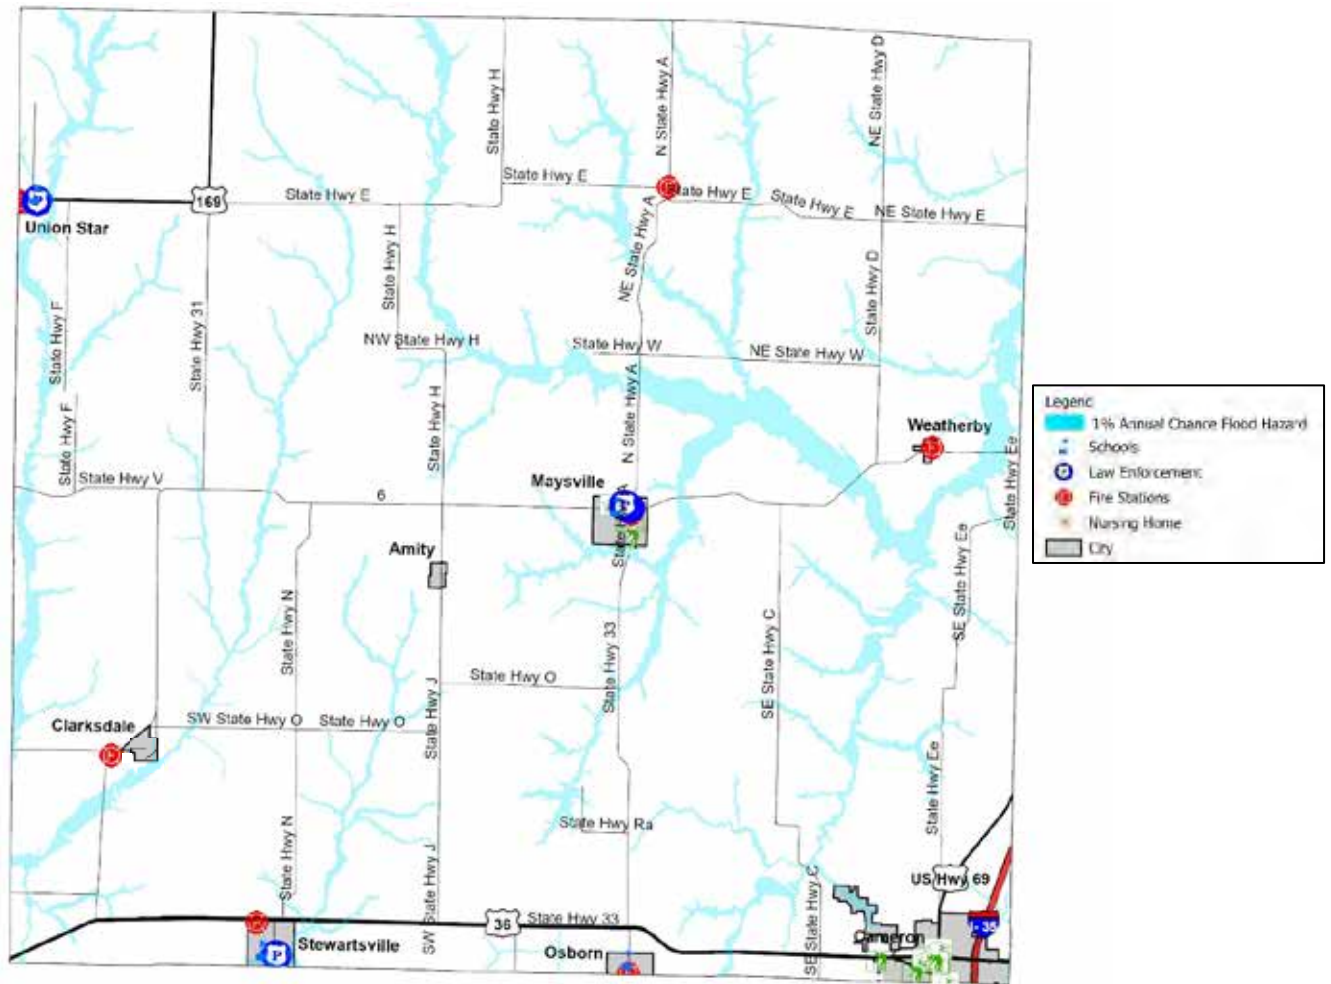

Figure 3.4. Amity 100-Year Floodplain

Figure 3.5. Clarksdale 100-Year Floodplain

Figure 3.6. Maysville 100-Year Floodplain

Figure 3.7. Stewartsville 100-Year Floodplain

Figure 3.8. Union Star 100-Year Floodplain

Flash flooding events pose the most pervasive hazard of the two flood types in the county due to permeability of soils, slopes, increasing urban development and extensive network of streams and rivers. Sustained rainfall or downpours at the rate of one inch per hour have caused street flooding in incorporated areas and made a significant number of low water crossings impassible. In the instances of low water crossings, flash flooding occurs in the floodplain while low-lying areas in all jurisdictions are susceptible to flash floods outside the 100-year floodplain. They also occur in areas without adequate drainage to carry away the amount of water that falls during intense rainfall events.

A review of the NCEI storm event database determined which jurisdictions are most prone to flash or riverine flooding from 2001 to December 2021 are listed in **Table 3.14 and 3.15**.

Strength/Magnitude/Extent

Missouri has a long and active history of flooding over the past century, according to the 2018 State Hazard Mitigation Plan. Flooding along Missouri’s major rivers generally results in slow-moving disasters. River crest levels are forecast several days in advance, allowing communities downstream sufficient time to take protective measures, such as sandbagging and evacuations. Nevertheless, floods exact a heavy toll in terms of human suffering and losses to public and private property. By contrast, flash flood events in recent years have caused a higher number of deaths and major property damage in many areas of Missouri.

According to the U.S. Geological Survey, two critical factors affect flooding due to rainfall: rainfall duration and rainfall intensity – the rate at which it rains. These factors contribute to a flood’s height, water velocity and other properties that reveal its magnitude.

National Flood Insurance Program (NFIP) Participation

Table 3.16 lists NFIP participants in the planning area. **Table 3.17** lists the number of policies in force, amount of insurance in force, number of closed losses, and total payments for each jurisdiction, where applicable. Sanctioned communities are those communities that are not currently participating in the NFIP and where a Flood Hazard Boundary Map or Flood Insurance Rate Map has been issued.

Table 3.16. NFIP Participation in DeKalb County

| Community ID # | Community Name | NFIP Participant (Y/N/Sanctioned) | Current Effective Map Date | Regular-Emergency Program Entry Date |
|----------------|----------------------|-----------------------------------|----------------------------|--------------------------------------|
| 90630 | City of Clarksdale | Y | 11/19/03 (M) | 11/19/03 |
| 290117 | City of Stewartville | Y | 11/19/03 (M) | 08/19/1985 |
| 290512 | City of Union Star | Y | 11/19/03 (M) | 08/19/85 |

Repetitive Loss/Severe Repetitive Loss Properties

Repetitive Loss Properties are those properties with at least two flood insurance payments of \$1,000 or more in a 10-year period. According to the Flood Insurance Administration, there are no repetitive loss properties in the county.

Severe Repetitive Loss (SRL): A SRL property is defined it as a single family property (consisting of one-to-four residences) that is covered under flood insurance by the NFIP; and has (1) incurred flood-related damage for which four or more separate claims payments have been paid under flood insurance coverage with the amount of each claim payment exceeding \$5,000 and with cumulative

amounts of such claims payments exceeding \$20,000; or (2) for which at least two separate claims payments have been made with the cumulative amount of such claims exceeding the reported value of the property.

There are no validated Severe Repetitive Loss residential structures located in DeKalb County.

Previous Occurrences

| 2017 | 3 | 0 | 0 | 0 | 0 |
| Total | 6 | | | | |

Source: NCEI, data accessed 1-24-22

In the flood event on 04-05-2017 in Clarksdale, State Routes P and V were temporarily closed due to flooding along Third Fork. State Route W along Middle Fork Lost Creek was temporarily closed during a flood event on 09-13-2016. No damages were reported as a result of these events.

Probability of Future Occurrence

Over the past 22 years, 14 flash flood events have occurred with no reported property damages. Based on this historical data, an average of .64 flash flood events (14 flash floods/22 years) occur in a given year, thus there is a 64 percent chance of a flash flood to occur in a given year. Since no property damages were reported, there are no annualized damage costs to report.

A total of six riverine flooding events have occurred over the past 22 years, resulting in .27 riverine flood events (6 floods/22 years) on average each year. Thus, there is a 27 percent chance for a riverine flood to occur in a given year. Since no property damages were reported, there are no annualized damage costs to report.

Changing Future Conditions Considerations

According to the State Plan, if departure from normal with respect to increased precipitation intensity continues, frequency of floods in Missouri is likely to increase as well. Over the last half century, average annual precipitation in most of the Midwest has increased by 5 to 10 percent. But rainfall during the four wettest days of the year has increased about 35 percent, and the amount of water flowing in most streams during the worst flood of the year has increased by more than 20 percent. It is likely (66-100% probability) that the frequency of heavy precipitation or the proportion of total rainfall from heavy falls will increase in the 21st century across the globe. More specifically, it is "very likely" (90-100% probability) that most areas of the United States will exhibit an increase of at least 5 percent in the maximum 5-day precipitation by the late 21st century. As the number of heavy rain events increase, more flooding and pooling water can be expected.

Flooding occasionally threatens navigation and riverfront communities, and greater river flows could increase these threats. In April and May 2011, a combination of heavy rainfall and melting snow caused a flood that closed the Mississippi River to navigation, threatened Caruthersville, and prompted evacuation of Cairo, Illinois, due to concerns that its flood protection levees might fail. The expected increases in rainfall frequency and intensity are likely to put additional stress on natural hydrological systems and community stormwater systems. Heavier snowfalls in the winter will lead to intensified spring flooding, and groundwater levels will remain high even in non-floodplain areas. Such changes in climate patterns can lead to the development of compounding events that interact to create extreme conditions. Flooding caused by high groundwater levels typically recedes more slowly than riverine flooding, slowing the response and recovery process. Groundwater-fed rivers and streams are also likely to experience heightened flooding when groundwater levels are high. Jurisdictions updating or installing stormwater management systems should consider potentially larger future discharge amounts when sizing culverts and drainage ways; storage capacity can also be increased by building retention basins to hold excess stormwater.

Communities already prone to flooding should be prepared for a potential increase in facility closures and/or damages, as well as an increase in public demand for flood response and assistance. Natural features that experience repeated flooding may manifest changes in the form of stream bank instability and changing shoreline, floodplain, and wetland boundaries. Communities may also wish to plan for the potential loss of cropland and damage to both private property and public infrastructure such as bridges. The environmental impacts of flooding include erosion, surface and groundwater contamination, and reduced water quality. The threat of more frequent flood events may thus be a concern particularly for communities who depend on lakes, rivers, or trout streams for tourism. Rural communities may experience increases in well contamination and road washouts, while urban areas may be particularly vulnerable to flash flooding as heavy rain events quickly overwhelm the ability of a more impermeable environment to absorb excess stormwater. Source: 2018 MO State Hazard Mitigation Plan, 3.1-3.2

Vulnerability

Vulnerability Overview

Since 1975, DeKalb County has been included in seven Presidential Disaster Declarations for flooding. Flooding presents a danger to life and property, often resulting in injuries, and in some cases, fatalities. Floodwaters themselves can interact with hazardous materials. Hazardous materials stored in large containers could break loose or puncture as a result of flood activity. Examples are bulk propane tanks. When this happens, evacuation of citizens is necessary.

Public health concerns may result from flooding, requiring disease and injury surveillance. Community sanitation to evaluate flood-affected food supplies may also be necessary. Private water and sewage sanitation could be impacted, and vector control (for mosquitoes and other entomology concerns) may be necessary.

Periods of heavy rain falling at the rate of one inch per hour floods low water crossings throughout the county making many roads impassable. Street flooding over roadways has been reported in all communities in the county. This creates a severe threat to motorists who attempt to drive through flood waters over the roadway.

When roads and bridges are inundated by water, damage can occur as the water scours materials around bridge abutments and gravel roads. **Section 3.2.2** in this plan contains information on scour critical bridges in the planning area.

Floodwaters can also cause erosion undermining road beds. In some instances, steep slopes that are saturated with water may cause mud or rock slides onto roadways. These damages can cause costly repairs for state, county, and city road and bridge maintenance departments. When sewer back-up occurs, this can result in costly clean-up for home and business owners as well as present a health hazard.

Areas in low lying areas outside of the floodplain are frequently flooded. Increases in development add to surface runoff and can exacerbate flash flooding in areas that previously have not experienced flooding.

The 2018 State Plan's section on State Vulnerability Overview and State Estimates of Potential Losses is the best and most recent data available. Clinton County does have relatively recent DFIRM data, which can help determine where flooding may potentially occur. The number of structures at risk was determined using Hazus analysis along with a structure inventory dataset developed by the University of Missouri GIS Department (MSDIS). **Table 3.21** below identifies the total potential direct building loss and income loss for DeKalb County.

Table 3.21. Potential Direct Building Loss and Income Loss for DeKalb County

| DeKalb County | Potential Flood Building/Income Loss |
|--|---|
| Countywide Building Exposure | \$1,090,102,000 |
| Structural Damage | \$4,407,000 |
| Loss Ratio | 0.40% |
| Contents Loss | \$3,509,000 |
| Inventory Loss | \$92,000 |
| Total Direct Loss | \$8,008,000 |
| Total Income Loss | \$7,000 |
| Total Direct and Income Loss | \$8,015,000 |

Potential Losses to Existing Development

Flood loss estimates by structure for DeKalb County were identified in the 2018 State Plan and are presented in **Table 3.22**. There are no school or special districts, or critical facilities directly located in Special Flood Hazard Areas (SFHA) in DeKalb County.

Table 3.22. Potential Losses for Building Type in DeKalb County

Source: 2018 MO State Mitigation Plan, pg. 3.114

Table 3.23 provides the total exposure count for structures in each jurisdiction. Losses were estimated by applying a 5 percent damage factor to total exposure.

| Type of Structure | # of Structures | Total # of Losses |
|----------------------------|------------------------|--------------------------|
| Residential | 70 | \$16,496,444 |
| Agriculture | 30 | \$6,162,273 |
| Commercial | 10 | \$60,938,981 |
| Education | -- | -- |
| Government | -- | -- |
| Industry | -- | -- |
| Total Loss- HAZUS Layer | | \$83,597,698 |
| Total # of People Affected | 174 | |

Table 3.23. Total Exposure of Structures and Contents by Building Type

| Jurisdiction | Residential | Commercial | Agriculture | Other | Estimated Exposure | Estimated Loss |
|----------------------|--------------------|-------------------|--------------------|--------------|---------------------------|-----------------------|
| Unincorp. DeKalb Co. | 2,063 | 184 | 4,061 | 25 | \$593,500,000 | \$29,675,000 |
| Amity | 32 | -- | -- | -- | \$7,869,000.00 | \$393,450.00 |
| Clarksdale | 132 | 11 | 6 | -- | \$36,032,000.00 | \$1,801,600.00 |
| Maysville | 433 | 39 | 17 | 10 | \$121,340,000.00 | \$6,067,000.00 |

| Stewartsville | 279 | 28 | 5 | 5 | \$78,486,000.00 | \$3,924,300.00 |
| Union Star | 189 | 7 | 5 | 2 | \$49,498,000.00 | \$2,474,900.00 |
| Weatherby | 53 | -- | -- | 1 | \$13,087,000.00 | \$654,350.00 |

Impact of Previous and Future Development

Future development could impact flash and riverine flooding in the planning area. Development in low-lying areas near rivers and streams or where interior drainage systems are not adequate to provide drainage during heavy rainfall events can increase the risk of flood. Future development would also increase impervious surfaces causing additional water run-off and drainage problems during heavy rainfall events.

Hazard Summary by Jurisdiction

Many areas in the county are potentially at risk to flood hazards, and exposure of assets in SFHAs varies among jurisdictions. It should be noted that all communities in DeKalb County can be impacted by the flooding of major roads and low water crossings. There are no school facilities in SFHAs and no previous damages were reported on the Data Collection Questionnaire for schools.

Problem Statement

DeKalb County has been listed in seven out of 14 Presidential Disaster Declarations for flood-related disasters in the state since 1975. Three communities in the county participate in the NFIP. Their participation in the NFIP enables residents to purchase flood insurance. Street flooding in incorporated areas can be addressed through storm water management projects and enforcing storm water management regulations.

3.4.2 Levee Failure

Hazard Profile

Hazard Description

Levees are earth embankments constructed along rivers and coastlines to protect adjacent lands from flooding. Floodwalls are concrete structures, often components of levee systems, designed for urban areas where there is insufficient room for earthen levees. When levees and floodwalls and their appurtenant structures are stressed beyond their capabilities to withstand floods, levee failure can result in injuries and loss of life, as well as damages to property, the environment, and the economy.

Levees can be small agricultural levees that protect farmland from high-frequency flooding. Levees can also be larger, designed to protect people and property in larger urban areas from less frequent flooding events such as the 100-year and 500-year flood levels. For purposes of this discussion, levee failure will refer to both overtopping and breach as defined in FEMA's Publication "So You Live Behind a Levee"

(<http://mrcc.isws.illinois.edu/1913Flood/awareness/materials/SoYouLiveBehindLevee.pdf>).

Following are the FEMA publication descriptions of different kinds of levee failure.

Overtopping: When a Flood Is Too Big

Overtopping occurs when floodwaters exceed the height of a levee and flow over its crown. As the water passes over the top, it may erode the levee, worsening the flooding and potentially causing an opening, or breach, in the levee.

Breaching: When a Levee Gives Way

A levee breach occurs when part of a levee gives way, creating an opening through which floodwaters may pass. A breach may occur gradually or suddenly. The most dangerous breaches happen quickly during periods of high water. The resulting torrent can quickly swamp a large area behind the failed levee with little or no warning.

Earthen levees can be damaged in several ways. For instance, strong river currents and waves can erode the surface. Debris and ice carried by floodwaters—and even large objects such as boats or barges—can collide with and gouge the levee. Trees growing on a levee can blow over, leaving a hole where the root wad and soil used to be. Burrowing animals can create holes that enable water to pass through a levee. If severe enough, any of these situations can lead to a zone of weakness that could cause a levee breach. In seismically active areas, earthquakes and ground shaking can cause a loss of soil strength, weakening a levee and possibly resulting in failure. Seismic activity can also cause levees to slide or slump, both of which can lead to failure.

Geographic Location

Missouri is a state with many levees. Currently, there is no single comprehensive inventory of levee systems in the state. Levees have been constructed across the state by public entities and private entities with varying levels of protection, inspection oversight, and maintenance. The lack of a comprehensive levee inventory is not unique to Missouri.

There are two concurrent nation-wide levee inventory development efforts, one led by the United State Army Corps of Engineers (USACE) and one led by Federal Emergency Management Agency (FEMA). The National Levee Database (NLD), developed by USACE, captures all USACE related levee projects, regardless of design levels of protection. The Midterm Levee Inventory (MLI), developed by FEMA, captures all levee data (USACE and non-USACE) but primarily focuses on levees that provide 1% annual-chance flood protection on FEMA Flood Insurance Rate Maps (FIRMs).

The National Flood Insurance Program (NFIP) defines a levee system in Title 44, Chapter 1, Section 59.1 of the Code of Federal Regulations (44 CFR 59.1) as a flood risk reduction system that consists of a levee, or levees and associated structures like closure and drainage devices that are constructed and operated with sound engineering practices to protect a specified area. It is a manmade structure, generally earthen that is designed and constructed with sound engineering practices to contain, control, or divert the flow of water to provide temporary protection from flooding. FEMA states on its Levee Resource Library website that it does not build, own, or certify levees. The USACE is responsible for building and maintaining levees in its inventory and for the inspection of its inventory. There may be states, communities and private levee owners that are responsible for maintaining and operating levees according to specific guidelines. The State of Missouri does not currently have a Levee Safety Program and does not currently own or operate any levees.

FEMA's role, and thus SEMA's role as the Cooperating Technical Partner (CTP) for the State is to "identify, analyze, and map the flood hazards associated with levees, and depict accreditation on Flood Insurance Rate Maps (FIRMs) for those levee systems for which the appropriate certification documentation has been submitted. For levees depicted on a FIRM showing protection for the base flood elevation, FEMA categorizes levees into one of 2 categories: 1) Accredited and 2) Non-Accredited. Accredited levees are ones in which the levee owner has provided data to FEMA demonstrating that the levee system is in compliance with Section 65.10. If a community is in the process of a mapping update and the levee accreditation process is underway, a special note can be placed on the FIRMs called a Provisionally Accredited Levee or PAL note which is a temporary designation denoting that the levee owners are undergoing the accreditation process and are expecting to reach accreditation within two years. If accreditation has not been reached during that timeframe, a mapping project to remove the note and depict the risk without the levee is initiated. (Source: 2018 State Plan).

It is likely that agricultural levees and other non-regulated levees within the planning area exist that are not inventoried or inspected. These levees that are not designed to provide protection from the one-percent annual chance flood would overtop or fail in the one-percent annual chance flood scenario. Therefore, any associated losses would be taken into account in the loss estimates provided in the Flood Hazard Section.

None of DeKalb County's population is protected from regulated levees. Population protected from low-head agricultural levees which are not regulated is unknown. In the event of a breach, it is unlikely that widespread damage would occur.

Strength/Magnitude/Extent

Levee failure is typically an additional or secondary impact of another disaster such as flooding or earthquake. The main difference between levee failure and losses associated with riverine flooding is magnitude. Levee failure often occurs during a flood event, causing destruction in addition to what would have been caused by flooding alone. In addition, there would be an increased potential for loss of life due to the speed of onset and greater depth, extent, and velocity of flooding because of levee breach.

As previously mentioned, agricultural levees and levees that are not designed to provide flood protection from at least the one-percent annual chance flood likely do exist in the planning area. However, none of these levees are shown on the Preliminary DFIRM, nor are they enrolled in the USACE Levee Safety Program. As a result, an inventory of these types of levees is not available for analysis. Additionally, since these types of levees do not provide protection from the one-percent annual chance flood, losses associated with overtopping or failure are captured in the Flood Section of this plan.

The USACE regularly inspects levees within its Levee Safety Program to monitor their overall condition, identify deficiencies, verify that maintenance is taking place, determine eligibility for federal rehabilitation assistance (in accordance with P.L. 84-99), and provide information about the levees on which the public relies. Inspection information also contributes to effective risk assessments and supports levee accreditation decisions for the National Flood Insurance Program administered by the Federal Emergency Management Agency (FEMA).

The USACE now conducts two types of levee inspections. Routine Inspection is a visual inspection to verify and rate levee system operation and maintenance. It is typically conducted each year for all levees in the USACE Levee Safety Program. Periodic Inspection is a comprehensive inspection led by a professional engineer and conducted by a USACE multidisciplinary team that includes the levee sponsor. The USACE typically conducts this inspection every five years on the federally authorized levees in the USACE Levee Safety Program.

Both Routine and Periodic Inspections result in a rating for operation and maintenance. Each levee segment receives an overall segment inspection rating of Acceptable, Minimally Acceptable, or Unacceptable. **Table 3.24** below defines the three ratings.

Table 3.24. Definitions of the Three Levee System Ratings

| | |
|-----------------------------|---|
| Acceptable | All inspection items are rated as “Acceptable.” |
| Minimally Acceptable | One or more levee segment inspection items are rated as “Minimally Acceptable,” or one or more items are rated as “Unacceptable,” and an engineering determination concludes that the “Unacceptable” inspection items would not prevent the segment/system from performing as intended during the next flood event. |
| Unacceptable | One or more levee segment inspection items are rated as “Unacceptable” and would prevent the segment/system from performing as intended, or a serious deficiency noted in past inspections (previous “Unacceptable” items in a “Minimally Acceptable” overall rating) has not been corrected within the established timeframe, not to exceed two years. |

Previous Occurrences

There is no levee system in the planning area, therefore there have been no breaches or incidents.

Probability of Future Occurrence

There is no probability of future occurrence since there is no levee system.

Changing Future Conditions Considerations

While there is no levee system identified in DeKalb County, it remains important to consider that the impact of changing future conditions on any levee failure will most likely be related to changes in precipitation and flood likelihood. Climate change projections suggest that precipitation may increase and occur in more extreme events, which may increase risk of flooding, putting stress on levees and increasing likelihood of levee failure. Furthermore, aging levee infrastructure and a lack of regular maintenance (including checking for seepage and removing trees, roots and other vegetation that can weaken a levee) coupled with more extreme weather events may increase the risk of future levee failure.

Vulnerability

Vulnerability Overview

The planning area is not vulnerable to a levee breach or incident.

Potential Losses to Existing Development

There are no buildings or property protected by a levee system so there is no potential loss to existing development.

Impact of Previous and Future Development

There is no known impact to previous and future development.

Hazard Summary by Jurisdiction

No jurisdictions in DeKalb County have levee-protected areas.

Problem Statement

DeKalb County does not have a regulated levee system so there have been no levee breaches or incidents. However, it's likely low-head agricultural levees exist in the planning area.

3.4.3 Dam Failure

Hazard Profile

Hazard Description

A dam is defined as a barrier constructed across a watercourse for the purpose of storage, control, or diversion of water. Dams are typically constructed of earth, rock, concrete, or mine tailings. Dam failure is the uncontrolled release of impounded water resulting in downstream flooding, affecting both life and property. Dam failure can be caused by any of the following:

1. Overtopping: Inadequate spillway design, debris blockage of spillways or settlement of the dam crest.
2. Piping: Internal erosion caused by embankment leakage, foundation leakage and deterioration of pertinent structures appended to the dam.
3. Erosion: Inadequate spillway capacity causing overtopping of the dam, flow erosion, and inadequate slope protection.
4. Structural Failure: Caused by an earthquake, slope instability or faulty construction.

According to the Missouri Department of Natural Resources (MDNR), As of 2020 Missouri had 5,535 recorded dams. Of those, only 62 are federally regulated dams and 699 are state regulated dams. MDNR regulates dams that are over 35 feet in height and not already federally regulated. They ensure these dams are safely constructed, operated, and maintained pursuant to Chapter 236 of Revised Statutes of Missouri. **Table 3.25** breaks down the hazard classification system the MDNR uses for both regulated and non-regulated dams.

Federally regulated dams fall under the jurisdiction of the U.S. Army Corps of Engineers (USACE) and the U.S. Department of Agriculture and Forest Service. The USACE maintains the National Inventory of Dams (NID), which includes the data and hazard classification system for dams described in **Table 3.26**.

Table 3.25. MoDNR Dam Hazard Classification Definitions

| Hazard Class | Definition |
|--------------|--|
| Class I | The area downstream from the dam that would be impacted by inundation contains ten or more permanent dwellings or any public building. Inspection of these dams must occur every two years. |
| Class II | The area downstream from the dam that would be impacted by inundation contains one to nine permanent dwellings, or one or more campgrounds with permanent water, sewer, and electrical services, or one or more industrial buildings. Inspection of these dams must occur every three years. |
| Class III | The area downstream from the dam that would be impacted by inundation does not contain any of the structures identified in either Class I or Class II dams. Inspection of these dams must occur every five years. |

Source: Missouri Department of Natural Resources, http://dnr.mo.gov/env/wrc/docs/rules_reg_94.pdf

Table 3.26. NID Dam Hazard Classification Definitions

| Hazard Class | Definition |
|--------------|---|
| Low Hazard | Failure results in likely loss of human life. |

| | |
|--------------------|--|
| Significant Hazard | Possible loss of human life and likely significant property or environmental destruction |
| High Hazard | Failure results in only minimal property damage |

Source: National Inventory of Dams

In order to be catalogued in the NID system, “Low Hazard” dams must also be at least 25 feet in height contain at least 15 acre-feet in storage, or, be at least 6 feet in height with at least 50 acre-feet in storage.

Geographic Location

Dams Located Within the Planning Area

According to the MDNR’s online GeoSTRAT tool, there are 69 dams located in DeKalb County. Of these dams, 11 fall under the USACE’s “High Hazard” dam classification and of these 15 dams 2 are considered “Class I” hazards under the MDNR classification system. **Table 3.27** lists the 15 NID defined “High Hazard” dams, along with details regarding their height, storage capacity, last inspection date, which river they connect to, and their nearest downstream city.

Figure 3.9 maps the location of all of the dams in DeKalb County, distinguishing the NID defined “High Hazard” from the “Low Hazard” dams.

Figure 3.9. Location of High and Low Hazard Dams in DeKalb County

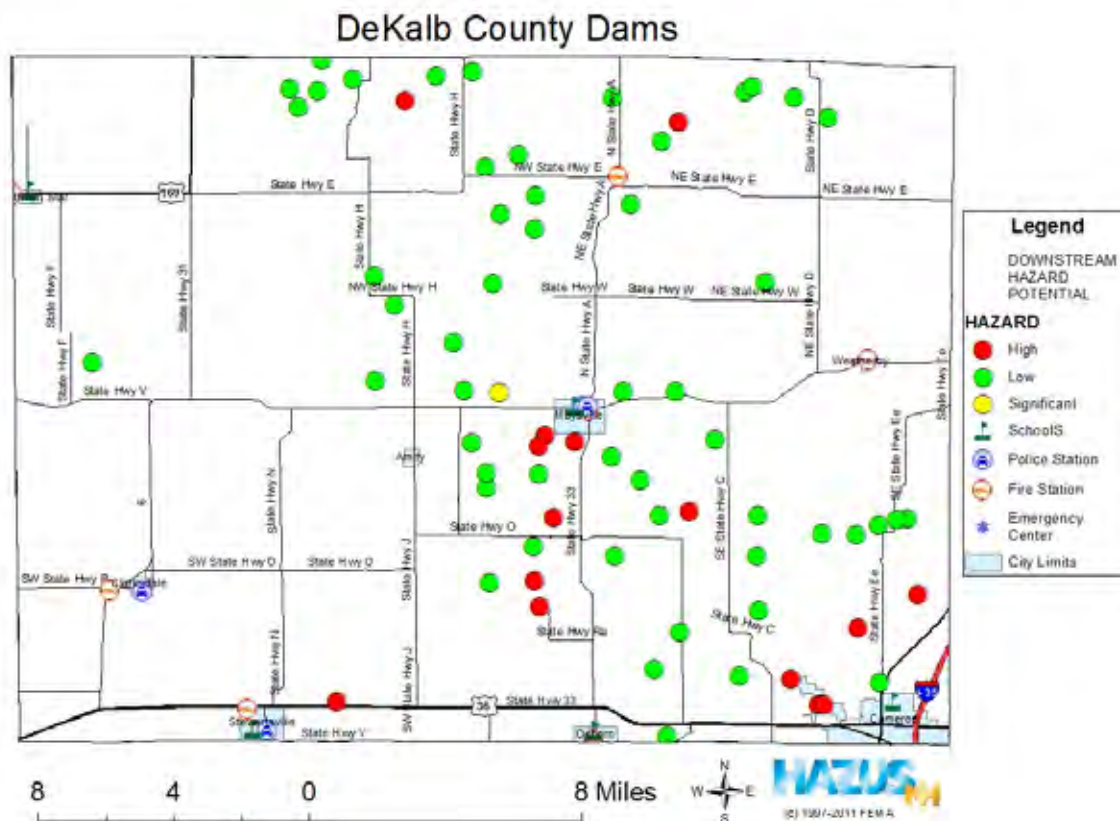

Table 3.27. High Hazard Dams in the DeKalb County

| Dam Name | Emergency Action Plan (EAP/AP) | Dam Height (Ft) | Normal Storage (Acre-Ft) | Last Inspection Date | River | Nearest Downstream City | Distance To Nearest City (Miles) | Dam Owner |
|---|--------------------------------|-----------------|--------------------------|----------------------|------------------------------------|-------------------------|----------------------------------|----------------------------|
| Maysville New City Dam (Class I) | Yes | 48 | 1,157 | 01/18/2017 | N/A | Maysville | 0 | City of Maysville |
| Buffalo Bill Dam (Class II) | Yes | 41 | 271 | 11/01/2016 | Tributary of West Fork Lost Creek | Pattonsburg | N/A | MDC |
| Pony Express Lake Dam (Class II) | Yes | 40 | 3,560 | 09/02/2015 | Tributary of West Fork Lost Creek | Santa Rosa | 22 | MDC |
| King Lake Dam (Class II) | Yes | 40 | 4,773 | 01/09/2018 | Lost Creek | Weatherby | N/A | MDC |
| Cameron Reservoir Dam #1 (Class II) | Yes | 36 | 630 | 01/09/2018 | Tributary of Grindstone Creek | Cameron | N/A | City of Cameron |

Contact the MoDNR Dam and Reservoir Safety Program at 800-361-4827 to request the inundation maps for your county to show geographic locations at risk, extent of failure and to perform GIS analysis of those assets at risk to dam failure.

Figure 3.10 provides the locations of NID high hazard dams, identified in yellow that are in DeKalb County. The highest concentration of NID high hazard dams are found near Maysville and Cameron.

Figure 3.10. High Hazard Dam Locations in DeKalb County and Areas Impacted in the Event of Breach.

Source: U.S. Army Corps of Engineers, Missouri Department of Natural Resources

Upstream Dams Outside the Planning Area

Dams located outside of DeKalb County are unlikely to impact the county in the event of failure.

Strength/Magnitude/Extent

The severity/magnitude of dam failure would be similar in some cases to the impacts associated with flood events (see the flood hazard vulnerability analysis and discussion). Based on the hazard class definitions, failure of any of the High Hazard/Class I dams could result in a serious threat of loss of human life, serious damage to residential, industrial or commercial areas, public utilities, public buildings, or major transportation facilities. Catastrophic failure of any high hazard dams has the potential to result in greater destruction due to the potential speed of onset and greater depth, extent, and velocity of flooding. For this reason, dam failures could flood areas outside of mapped flood hazards. Dam failure can result not only in the loss of life, but also property damaged and loss of income if agricultural fields are flooded.

Previous Occurrences

There are no known records of dam failures in DeKalb County. Since there are zero recorded events causing damage in the planning area, a calculation of a probability percent is not possible. According to information from the 2018 State Plan, Missouri's percentage of high hazard dams in the DNR inventory puts the State at about the national average for that category.

Probability of Future Occurrence

There is no record of a dam failure within the county so it is not possible to calculate the probability of future occurrence. If development occurs in inundation zones the likelihood of loss of life increases in the event of dam failure. Additionally, the probability of dam failure increases as many of the smaller and privately owned dams continue to deteriorate without the benefit of further regulation or improvements. Regular inspection and maintenance schedules for dams greatly reduces the probability of dam failure. MDNR Class I dams must be inspected every two years, Class II every three years and Class III every five years. By adhering to this schedule the likelihood of failure will be kept to a minimum.

Changing Future Conditions Considerations

According to the 2018 State HMP, studies have been conducted to investigate the impact of climate change scenarios on dam safety. Dam failure is already tied to flooding and the increased pressure flooding places on dams. The impacts of changing future conditions on dam failure will most likely be those related to changes in precipitation and flood likelihood. Changing future conditions projections suggest that precipitation may increase and occur in more extreme events, which may increase risk of flooding, putting stress on dams and increasing likelihood of dam failure.

Vulnerability

Vulnerability Overview

Vulnerability to dam failure in DeKalb County is limited to structures located in dam inundation zones. The dams are located in unincorporated parts of the county and no critical structures are located in the inundation zones. Currently, there are ten state regulated dams with heights of 35 or greater. One of these dams, Maysville New City Dam, is rated High Hazard/Class I dam. Five dams are rated Class II and four are rated Class III. Although failure potential certainly exists for these non-regulated dams, it is very difficult to attempt to analyze vulnerability due to data limitations. There are no federally regulated dams in DeKalb County.

Potential Losses to Existing Development: (including types and numbers, of buildings, critical facilities, etc.)

Table 3.28 lists the exposure vulnerability for the ten state-regulated dams (over 35 feet in height) in DeKalb County.

Table 3.28. Vulnerability Analysis for Failure of State-regulated Dams

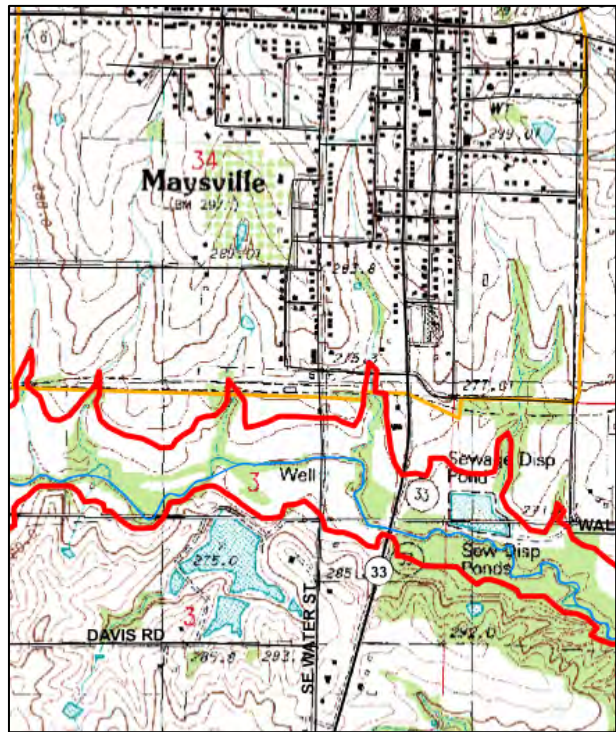

| Jurisdiction | Estimated # of Buildings Vulnerable | Average Exposure Value Per Structure | Estimated Total Potential Building Exposure | Estimated Total Population Exposure | Estimated Building Losses |
|---------------------|--|---|--|--|----------------------------------|
| DeKalb County | 35 | \$82,530 | \$6,049,514 | 188 | \$3,024,757 |

Source: 2018 State Plan

Maysville New City Dam

A portion of the Maysville New City Dam inundation zone is shown in **Figure 3.11**. This is the only dam in DeKalb County that is both a Class I state regulated dam and a high hazard NID dam. Approximately 30 minutes after a breach, the flood waters would reach the southwest side of Maysville city limits and then the sewage disposal ponds. If flood waters stayed within the inundation zone, shown in red, residential structures would be spared. However, as previously noted, depending on the speed and velocity of a breach and flooding, inundation zones might be exceeded and residential structures could be impacted. No Emergency Action Plan (EAP) is required.

Figure 3.11. Maysville New City Dam Inundation Zone in Maysville

Source: MDNR, Maysville New City Dam Report

Pony Express Lake Dam

The Pony Express Lake Dam inundation zone is not located near any city limits. However, a breach would impact several rural residential and agricultural structures, as shown in **Figure 3.12**. There is an EAP.

Figure 3.12. Pony Express Lake Dam Inundation Zone

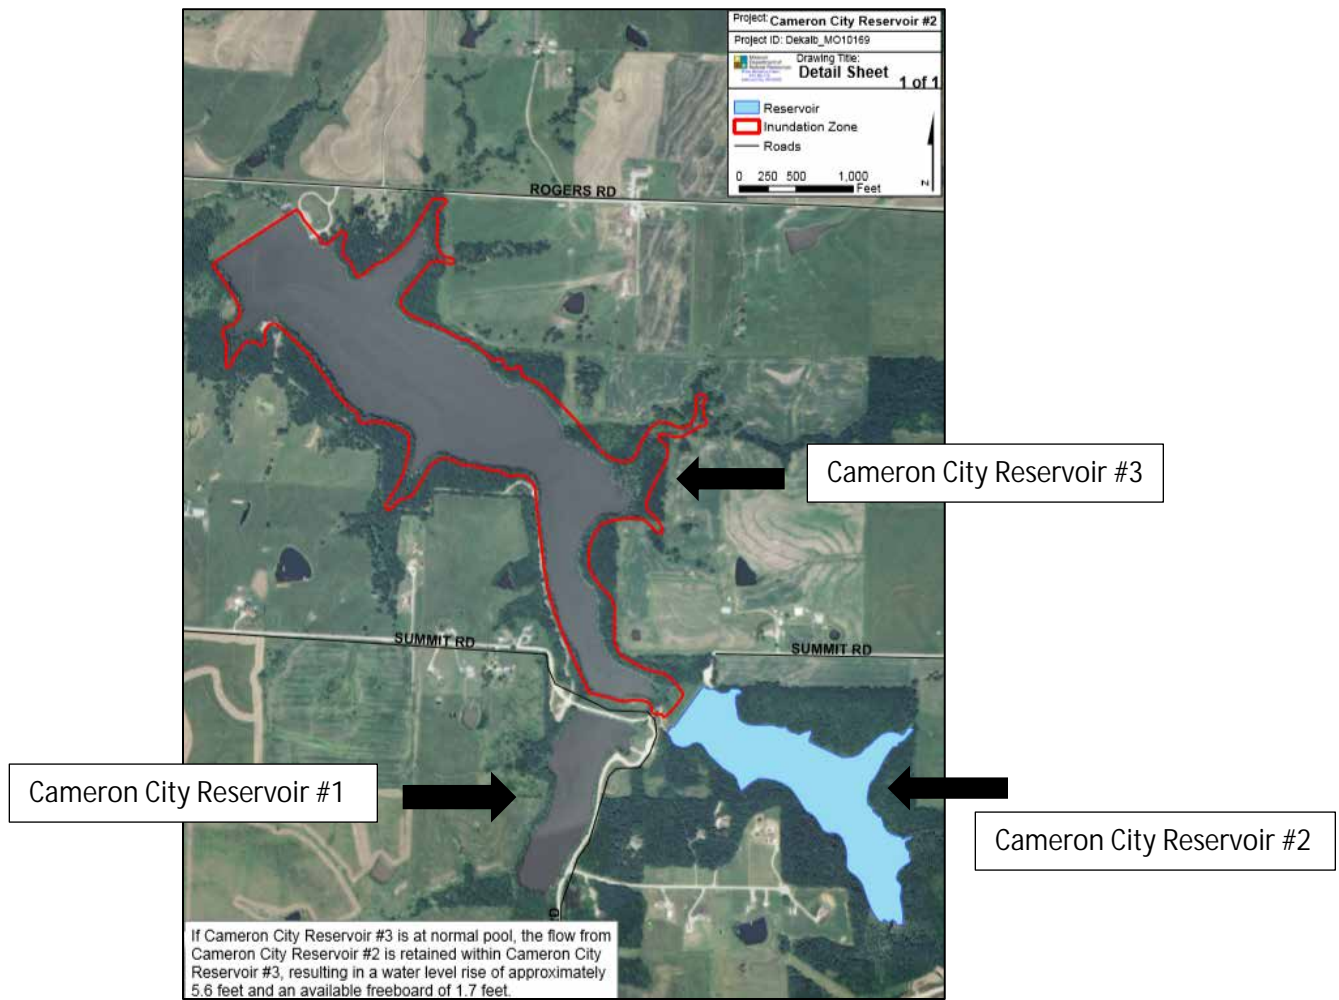

Source: MoDNR, Pony Express Lake Dam Report

Cameron City Reservoir Dams #1 and #2

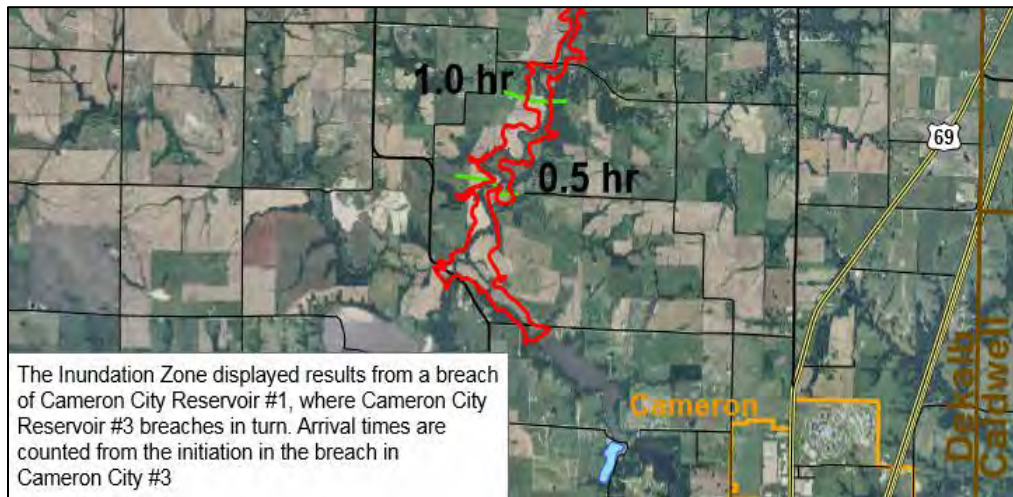

Cameron City Reservoir Dams #1 and #2 are located south of Cameron City Reservoir Dam #3, as shown in Figure 3.8. Flood waters from a breach in Cameron City #1 or #2 would flow into #3, raising the water level. Figure 3.9 shows the flood arrival times in the event of Cameron City #3 breach. There are EAPs and recent inspections for the Cameron City #1 and #2 since they are state regulated. However, Cameron City #3 is not regulated by the state since the dam height is just under 35 feet. It was last inspected in 1979 and is not required to have an EAP. The duration of the inundation zone, a portion of the inundation zone is shown in red in the figures below, does not encroach heavily populated areas. At the four-hour mark after a breach, there are several structures located just outside of the inundation zone which could be threatened.

Figure 3.13. Cameron City Reservoir Dam #1 and 2 Inundation Zones

Source: MoDNR, Cameron City Reservoir #2 Dam Report

Figure 3.14. Cameron City Reservoir Dam #1 and 2 Inundation Zones

Source: MoDNR, Cameron City Reservoir #1 Dam Report

Impact of Previous and Future Development

Future development in DeKalb County could impact the amount of damages caused by a dam failure in the planning area if development occurs in the dam inundation area. Most of DeKalb County is rural but the southeast area of the county, the City of Cameron, is experiencing growth. Caution must be exercised in developing areas in and near inundation zones of High Hazard/Class I dams.

Hazard Summary by Jurisdiction

Vulnerability to dam failure varies across the planning area. The City of Maysville has a sewer disposal pond located in an inundation zone. According to the 2018 State Plan an estimated seven people and 38 buildings are vulnerable to a dam failure.

Problem Statement

Although the probability of dam failure in the county is low the potential for damage remains. Eight dams have emergency action plans. Emergency action plans written for dams include procedures for notification and coordination with local law enforcement and other governmental agencies, information on the potential inundation area, plans for warning and evacuation, and procedures for making emergency repairs. Residents near a Class I or Class II hazard dams should become familiar with what action to take if there is a dam breach. Public education campaigns can help inform and prepare citizens.

3.4.4 Earthquakes

Hazard Profile

Hazard Description

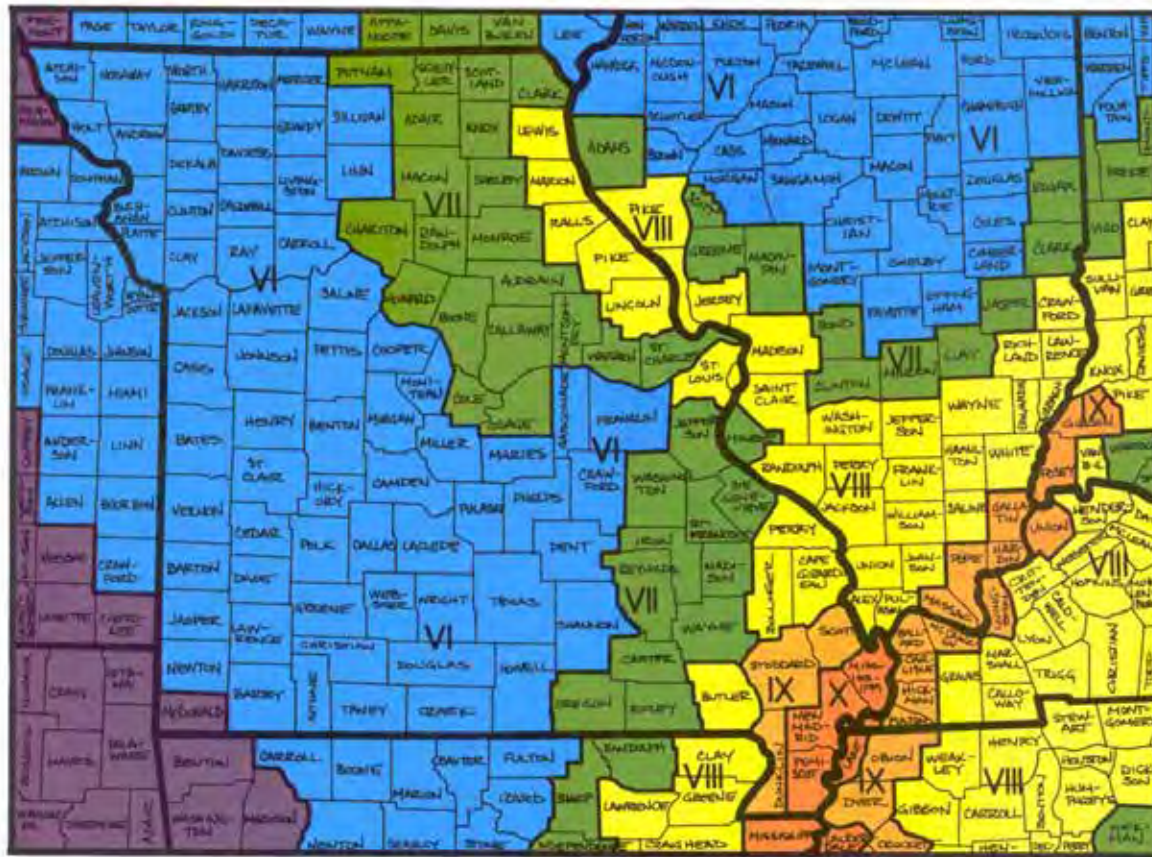

An earthquake is a sudden motion or trembling that is caused by a release of energy accumulated within or along the edge of the earth's tectonic plates. Earthquakes occur primarily along fault zones and tears in the earth's crust. Along these faults and tears in the crust, stresses can build until one side of the fault slips, generating compressive and shear energy that produces the shaking and damage to the built environment. Heaviest damage generally occurs nearest the earthquake epicenter, which is that point on the earth's surface directly above the point of fault movement. The composition of geologic materials between these points is a major factor in transmitting the energy to buildings and other structures on the earth's surface.

The greatest hazard from earthquakes in DeKalb County comes from the New Madrid Seismic Zone situated in the boot-heel area of southeast Missouri. The potential of high magnitude earthquakes occurring along the New Madrid Fault presents risk that does not vary across the planning area. The Nemaha uplift in central Kansas is also prone to seismic activity, however, the center of the Humbolt fault zone near the Nemaha Uplift is approximately 250 miles southwest of DeKalb County and produces lower magnitude seismic events.

Geographic Location

Figure 3.15 shows the highest projected Modified Mercalli intensities by county from a potential magnitude 7.6 earthquake whose epicenter could be anywhere along the length of the New Madrid Seismic Zone. The secondary maps in **Figure 3.16** show the same regional intensities for 6.7 and 8.6 earthquakes, respectively.

Figure 3.15. Impact Zones for Earthquake Along the New Madrid Fault

This map shows the highest projected Modified Mercalli intensities by county from a potential magnitude - 7.6 earthquake whose epicenter could be anywhere along the length of the New Madrid seismic zone.

This map shows the highest projected Modified Mercalli intensities by county from a potential magnitude - 6.7 earthquake whose epicenter could be anywhere along the length of the New Madrid seismic zone.

This map shows the highest projected Modified Mercalli intensities by county from a potential magnitude - 8.6 earthquake whose epicenter could be anywhere along the length of the New Madrid seismic zone.

Source: https://sema.dps.mo.gov/docs/EQ_Map.pdf

Figure 3.16. Projected Earthquake Intensities

MODIFIED MERCALLI INTENSITY SCALE

I People do not feel any Earth movement.

II A few people might notice movement.

III Many people indoors feel movement. Hanging objects swing.

IV Most people indoors feel movement. Dishes, windows, and doors rattle. Walls and frames of structures creak. Liquids in open vessels are slightly disturbed. Parked cars rock.

V Almost everyone feels movement. Most people are awakened. Doors swing open or closed. Dishes are broken. Pictures on the wall move. Windows crack in some cases. Small objects move or are turned over. Liquids might spill out of open containers.

VI Everyone feels movement. Poorly built buildings are damaged slightly. Considerable quantities of dishes and glassware, and some windows are broken. People have trouble walking. Pictures fall off walls. Objects fall from shelves. Plaster in walls might crack. Some furniture is overturned. Small bells in churches, chapels and schools ring.

VII People have difficulty standing. Considerable damage in poorly built or badly designed buildings, adobe houses, old walls, spires and others. Damage is slight to moderate in well-built buildings. Numerous windows are broken. Weak chimneys break at roof lines. Cornices from towers and high buildings fall. Loose bricks fall from buildings. Heavy furniture is overturned and damaged. Some sand and gravel stream banks cave in.

VIII Drivers have trouble steering. Poorly built structures suffer severe damage. Ordinary substantial buildings partially collapse. Damage slight in structures especially built to withstand earthquakes. Tree branches break. Houses not bolted down might shift on their foundations. Tall structures such as towers and chimneys might twist and fall. Temporary or permanent changes in springs and wells. Sand and mud is ejected in small amounts.

IX Most buildings suffer damage. Houses that are not bolted down move off their foundations. Some underground pipes are broken. The ground cracks conspicuously. Reservoirs suffer severe damage.

X Well-built wooden structures are severely damaged and some destroyed. Most masonry and frame structures are destroyed, including their foundations. Some bridges are destroyed. Dams are seriously damaged. Large landslides occur. Water is thrown on the banks of canals, rivers, and lakes. Railroad tracks are bent slightly. Cracks are opened in cement pavements and asphalt road surfaces.

XI Few if any masonry structures remain standing. Large, well-built bridges are destroyed. Wood frame structures are severely damaged, especially near epicenters. Buried pipelines are rendered completely useless. Railroad tracks are badly bent. Water mixed with sand, and mud is ejected in large amounts.

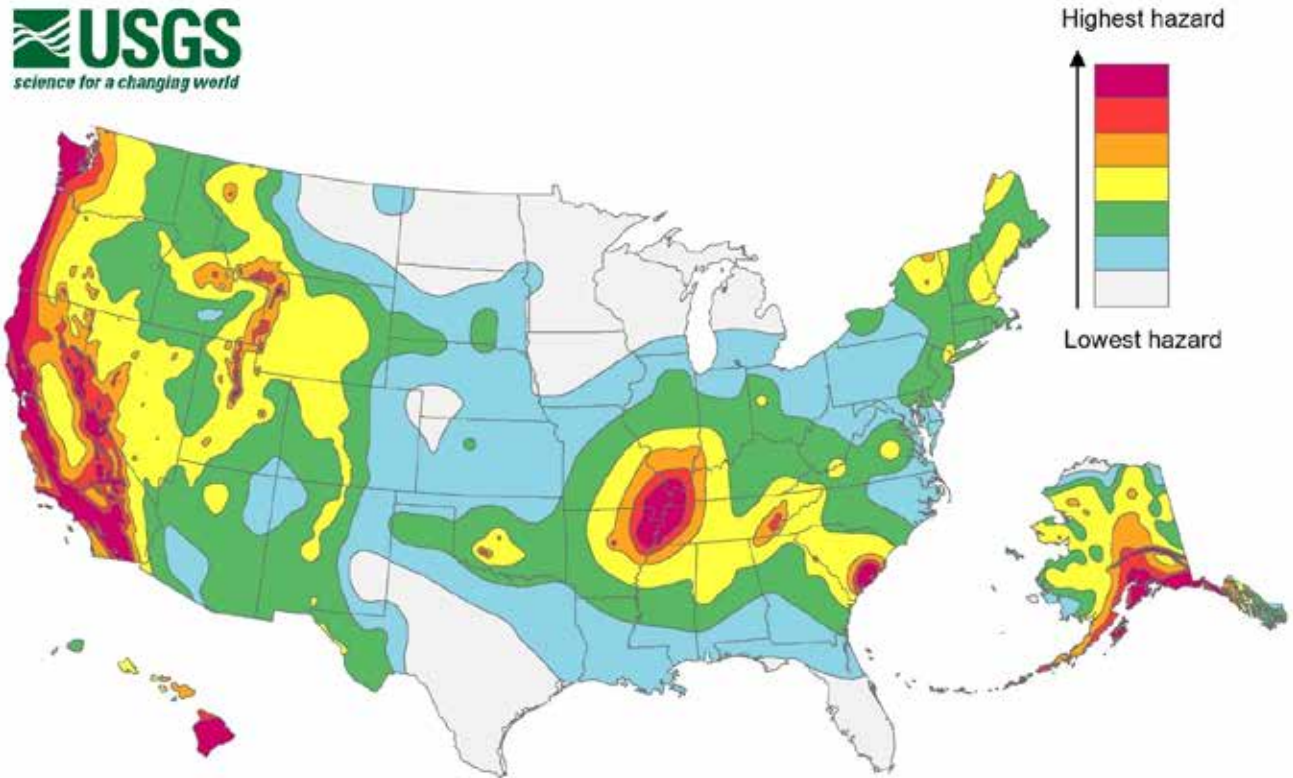

XII Damage is total, and nearly all works of construction are damaged greatly or destroyed. Objects are thrown into the air. The ground moves in waves or ripples. Large amounts of rock may move. Lakes are dammed, waterfalls formed and rivers are deflected.

Intensity is a numerical index describing the effects of an earthquake on the surface of the Earth, on man, and on structures built by man. The intensities shown in these maps are the highest likely under the most adverse geologic conditions. There will actually be a range in intensities within any small area such as a town or county, with the highest intensity generally occurring at only a few sites. Earthquakes of all three magnitudes represented in these maps occurred during the 1811 - 1812 "New Madrid earthquakes." The isoseismal patterns shown here, however, were simulated based on actual patterns of somewhat smaller but damaging earthquakes that occurred in the New Madrid seismic zone in 1843 and 1895.

Source: United States Geological Survey at <https://www.usgs.gov/media/images/2018-long-term-national-seismic-hazard-map>

Strength/Magnitude/Extent

The extent or severity of earthquakes is generally measured in two ways: 1) the Richter Magnitude Scale is a measure of earthquake magnitude; and 2) the Modified Mercalli Intensity Scale is a measure of earthquake severity. The two scales are defined as follows:

Richter Magnitude Scale

The Richter Magnitude Scale was developed in 1935 as a device to compare the size of earthquakes. The magnitude of an earthquake is measured using a logarithm of the maximum extent of waves recorded by seismographs. Adjustments are made to reflect the variation in the distance between the various seismographs and the epicenter of the earthquakes. On the Richter Scale, magnitude is expressed in whole numbers and decimal fractions. For example, comparing a 5.3 and a 6.3 earthquake shows that the 6.3 quake is ten times bigger in magnitude. Each whole number increase in magnitude represents a tenfold increase in measured amplitude because of the logarithm. Each whole number step in the magnitude scale represents a release of approximately 31 times more energy.

Modified Mercalli Intensity Scale

The intensity of an earthquake is measured by the effect of the earthquake on the earth's surface. The intensity scale is based on the responses to the quake, such as people awakening, movement of furniture, damage to chimneys, etc. The intensity scale currently used in the United States is the Modified Mercalli (MM) Intensity Scale. It was developed in 1931 and is composed of 12 increasing levels of intensity. They range from imperceptible shaking to catastrophic destruction, and each of the 12 levels is denoted by a Roman numeral. The scale does not have a mathematical basis but is based on observed effects. Its use gives the laymen a more meaningful idea of the severity.

Previous Occurrences

Earthquakes are rare in DeKalb County. There have been no reported earthquakes since 1931.

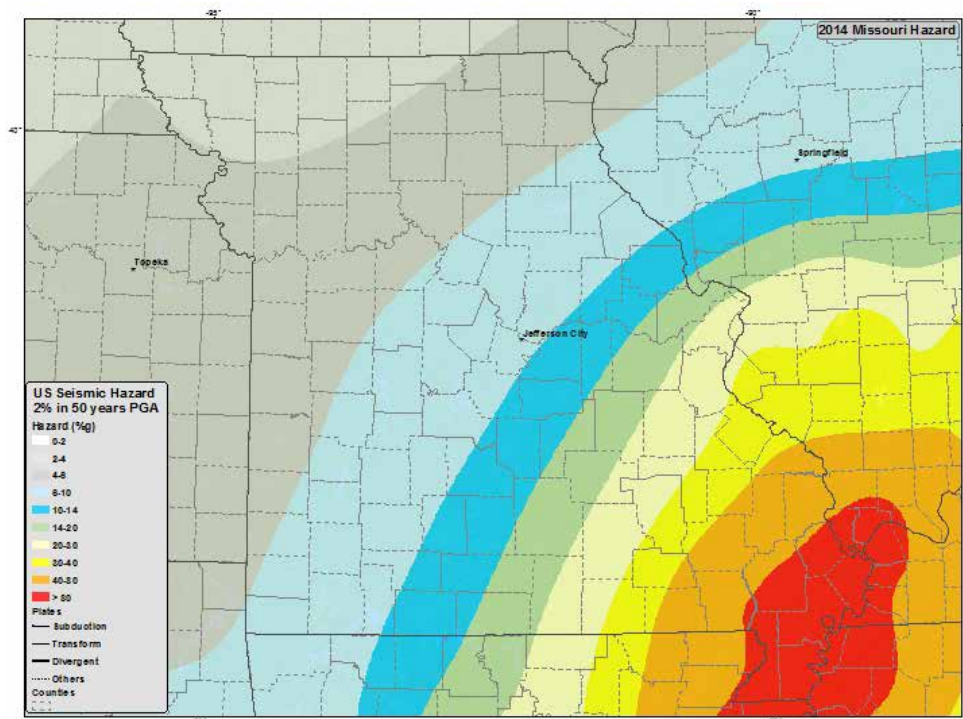

On February 13, 2016, a neighboring county, Buchanan County, felt tremors from a 5.1 earthquake originating near Fairview, Oklahoma. No damage was reported. There is speculation that the earthquake was the result of fracking, a man-made activity. Thus, man-made activities may contribute to future earthquake activity in DeKalb County.

Probability of Future Occurrence

The United States Geological Survey (USGS) earthquake probability map for the DeKalb County area is shown in **Figure 3.18**. No known earthquakes have occurred in DeKalb County and according to Homefacts.com, there is a .35 percent of a 5.0 earthquake or greater in the next 50 years.

<https://www.homefacts.com/earthquakes/Missouri/Dekalb-County.html>

Figure 3.18 2014 Seismic Hazard Map of Missouri

<https://www.usgs.gov/media/images/2014-seismic-hazard-map-missouri>

Changing Future Conditions Considerations

Scientists are beginning to believe there may be a connection between changing climate conditions and earthquakes. Redistribution of weight over fault lines from changing ice caps and sea-level could potentially have an influence on earthquake occurrences. However, currently no studies quantify the relationship to a high level of detail, so recent earthquakes should not be linked with climate change. While not conclusive, early research suggests that more intense earthquakes and tsunamis may eventually be added to the adverse consequences that are caused by changing future conditions. (Source: Missouri State Hazard Mitigation Plan 2018, pg. 3202, https://sema.dps.mo.gov/docs/programs/LRMF/mitigation/MO_Hazard_Mitigation_Plan2018.pdf)

Vulnerability

Vulnerability Overview

Ground shaking is the most damaging effect from earthquakes. Ground shaking will impact all structures and critical infrastructure such as roads and electrical transmission systems. In the event of a 7.6 magnitude earthquake, damage to structures would vary depending on the quality of construction. In addition, some underground utilities may be damaged. Injuries may occur but fatalities are unlikely.

Missouri is the third largest market for earthquake insurance among the states, exceeded only by California and Washington. A study by the U.S. Geological Survey estimates the probability of a magnitude 7.5 or greater earthquake in the New Madrid zone over the next 50 years is 7-10 percent. The probability of an earthquake exceeding magnitude 6 over the same period is 25-40 percent. A joint assessment by the Mid-America Earthquake Center of the University of Illinois and the Federal Emergency Management Agency predicts the New Madrid event could constitute the highest total economic loss of any natural disaster in U.S. history. Earthquake coverage is not included on most homeowners' insurance policies. It must be purchased as separate coverage, called an "endorsement" or as a stand-alone policy. This type of insurance requires that the earthquake is the direct cause of damage to the property. Natural disasters can, in many instances, trigger other events that may also damage property. One example is earthquakes causing bodies of water to produce waves, resulting in flooding.

Earthquake coverage pays for damage caused by the shaking and cracking that can damage homes and other structures. Other damage indirectly caused by earthquakes may be covered by other insurance. Fire and water damage due to burst gas and water pipes - even though it may be caused by a quake - is generally covered by the standard portion of the homeowner's policy. Earthquake damage to vehicles is covered by the comprehensive portion of auto policies.

Earthquake insurance usually features two high deductibles: Rather than a dollar amount, it's a percentage of the cost of rebuilding the home and a separate deductible for the home's contents. Deductibles of 10-15 percent are common. For example, with a 15 percent deductible, the owner of a \$200,000 home could expect to pay up to \$30,000 in deductibles for damage to the dwelling before receiving any benefit from their earthquake insurance policy.

The material used to build the home can also determine premiums or whether your home is even insurable. For instance, premiums may be lower for wood-frame homes, which withstand tremors better than homes made of masonry such as brick and stone. Single-story homes may also have lower premiums as they tend to sustain less damage from an earthquake. Age of the home can also affect premiums. Some insurers will not offer earthquake insurance for masonry homes. <https://insurance.mo.gov/earthquake/>

Potential Losses to Existing Development

A scenario based on an event with a 2% probability of exceedance in 50 years, was done to model a worst-case scenario, as demonstrated in the 2013 State Plan. The methodology is based on probabilistic seismic hazard shaking grids developed by the U.S. Geological Survey (USGS) for the National Seismic Hazard Maps that are included with Hazus. The USGS maps provide estimates of peak ground acceleration and spectral acceleration at periods of 0.3 second and 1.0 second, respectively, which have a 2% probability of exceedance in the next 50 years. The International Building Code uses this level of ground shaking for building design in seismic areas. This scenario used a 7.7 driving magnitude in HAZUS-MH, which is the magnitude used for typical New Madrid fault planning scenarios in Missouri. Table 3.19 depicts the estimated losses in the county based on this scenario.

The Hazus building inventory counts are based on the 2010 census data adjusted to 2014 numbers using the Dun & Bradstreet Business Population Report. Inventory values reflect 2014 valuations, based on RSMeans (a supplier of construction cost information) replacement costs. Population counts are 2010 estimates from the U.S. Census Bureau. **Table 3.19** depicts the estimated losses for the county based on this scenario from Table 3.61 of the 2018 Missouri State Hazard Mitigation Plan. https://sema.dps.mo.gov/docs/programs/LRMF/mitigation/MO_Hazard_Mitigation_Plan2018.pdf

Table 3.19 Estimated Earthquake Losses for DeKalb County

| Jurisdiction | Structural Damage | Non-Structural Damage | Contents Damage and Inventory Loss | Loss Ratio (%) | Income Loss | Total Economic Loss to Buildings |
|---------------|-------------------|-----------------------|------------------------------------|----------------|-------------|----------------------------------|
| DeKalb County | \$829,000 | \$1,511,000 | \$353,000 | 0.21 | \$858,000 | \$3,550,000 |

(Source: https://sema.dps.mo.gov/docs/programs/LRMF/mitigation/MO_Hazard_Mitigation_Plan2018.pdf)

Impact of Previous and Future Development

Future development is not expected to increase the risk other than contributing to the overall exposure of potential damage.

Hazard Summary by Jurisdiction

Since the earthquake intensity is not likely to vary greatly across the planning area, the risk will be the same throughout. As previously stated, damages could differ in communities that have older structures. **Table 3.20** lists the timeframe housing structures were built in in the county’s jurisdictions.

Table 3.20 Age of Housing Structures in DeKalb County

| Year Structure Built | DeKalb County | Amity | Clarksdale | Maysville | Osborn | Stewartsville | Union Star | Weatherby |
|----------------------|---------------|-------|------------|-----------|--------|---------------|------------|-----------|
| 2014 or later | 37 | 0 | 0 | 10 | 1 | 0 | 0 | 0 |
| 2010 to 2013 | 105 | 0 | 0 | 5 | 0 | 6 | 0 | 1 |
| 2000 to 2009 | 530 | 2 | 1 | 20 | 11 | 41 | 13 | 3 |
| 1980 to 1999 | 1,154 | 3 | 43 | 55 | 75 | 100 | 34 | 1 |
| 1960 to 1979 | 1,254 | 1 | 39 | 215 | 48 | 93 | 52 | 3 |
| 1940 to 1959 | 462 | 4 | 24 | 79 | 33 | 23 | 54 | 10 |
| 1939 or earlier | 783 | 27 | 14 | 166 | 36 | 67 | 78 | 25 |

| | | | | | | | | |
|--------------------------|-------|----|-----|-----|-----|-----|-----|----|
| Total # of Housing Units | 4,325 | 37 | 121 | 540 | 204 | 330 | 231 | 43 |
|--------------------------|-------|----|-----|-----|-----|-----|-----|----|

(Source: <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>)

Problem Statement

Based on intensity damage description in **Figure 3.18**, a 7.6 magnitude earthquake along the New Madrid fault may result in slight damage to older, poorly built structures, if any. Over 30 percent of the housing structures in Amity, Union Star, and Weatherby were built prior to 1940 and may be impacted more by an earthquake. Impact to older homes can be somewhat mitigated during remodeling and renovation. Potential damages to future development can be mitigated by all jurisdictions adopting and enforcing IBC 2012 building codes.

3.4.5 Land Subsidence/Sinkholes

Hazard Profile

Hazard Description

Sinkholes are common where the rock below the land surface is limestone, carbonate rock, salt beds, or rocks that naturally can be dissolved by ground water circulating through them. As the rock dissolves, spaces and caverns develop underground and ultimately the land above the spaces collapse. In Missouri, sinkhole problems are usually a result of surface materials above openings into bedrock caves eroding and collapsing into the cave opening. These collapses are called “cover collapses” and geologic information can be applied to predict the general regions where collapse will occur. Sinkholes range in size from several square yards to hundreds of acres and may be quite shallow or hundreds of feet deep.

The sudden collapse of the land surface above them can be dramatic and range in size from broad, regional lowering of the land surface to localized collapse. However, the primary causes of most subsidence are human activities: underground mining of coal, groundwater or petroleum withdrawal, and drainage of organic soils. Fifty-eight mineral mines have operated in DeKalb County.

Sinkholes can develop as a result of subsurface void spaces created over time due to the erosion of subsurface limestone (karst).

Land subsidence occurs slowly and continuously over time, as a general rule. On occasion, it can occur abruptly, as in the sudden formation of sinkholes. Sinkhole formation can be aggravated by flooding.

According to the U.S. Geological Survey (USGS), the most damage from sinkholes tends to occur in Florida, Texas, Alabama, Missouri, Kentucky, Tennessee, and Pennsylvania. Fifty-nine percent of Missouri is underlain by thick, carbonate rock that makes Missouri vulnerable to sinkholes. Sinkholes occur in Missouri on a fairly frequent basis. Most of Missouri’s sinkholes occur naturally in the State’s karst regions (areas with soluble bedrock). They are a common geologic hazard in southern Missouri, but also occur in the central and northeastern parts of the state. Missouri sinkholes have varied from a few feet to hundreds of acres and from less than one to more than 100 feet deep. The largest known sinkhole in Missouri encompasses about 700 acres in western Boone County, southeast of where Interstate 70 crosses the Missouri River. Sinkholes can also vary in shape from shallow bowls and saucers to forms with vertical walls. Some hold water and form natural ponds.

Other potential causes of collapse include man-made features-- such as septic tanks, cisterns, pipelines, and old hand-dug wells and shallow mine workings-- all of which lose their structural integrity as they age. However, unlike sinkholes, these features normally remain stable once remediated.

Geographic Location

There are no known documented sinkholes in DeKalb County.

Strength/Magnitude/Extent

Sinkholes vary in size and location, and these variances will determine the impact of the hazard. A sinkhole could result in the loss of a personal vehicle, a building collapse, or damage to infrastructure such as roads, water, or sewer lines. Groundwater contamination is also possible from a sinkhole. Because of the relationship of sinkholes to groundwater, pollutants captured or dumped in sinkholes could affect a community’s groundwater system. Sinkhole collapse could be triggered by large earthquakes. Sinkholes located in floodplains can absorb floodwaters but make detailed flood hazard studies difficult to model.

The 2018 State Plan included only seven documented sinkhole “notable events”. The plan stated that sinkholes are common to Missouri and the probability is high that they will occur in the future. To date, Missouri sinkholes have historically not had major impacts on development nor have they caused serious damage. Thus, the severity of future events is likely to be low.

Previous Occurrences

Although the 2018 State Plan states that sinkholes are a regular occurrence in Missouri, they are rarely events of any significance. There are no documented sinkholes occurrences in DeKalb County.

Probability of Future Occurrence

Since there are no records of previous event dates in the planning area, the probability of a future occurrence cannot be calculated.

Vulnerability

Vulnerability Overview

DeKalb County has not experienced any sinkhole events.

Potential Losses to Existing Development

It is difficult to estimate future losses based on historical losses since no known losses have occurred.

Impact of Previous and Future Development

Even though Missouri has a moderate probability of a sinkhole event, the soil and subsoil structure of DeKalb County make significant land movement events unlikely.

Hazard Summary by Jurisdiction

DeKalb County has not experienced any sinkhole events.

Problem Statement

Even though the county has not experienced any sinkhole events, jurisdictions should be mindful that an event could occur, particularly at a former mineral mining site.

3.4.6 Drought

Hazard Profile

Hazard Description

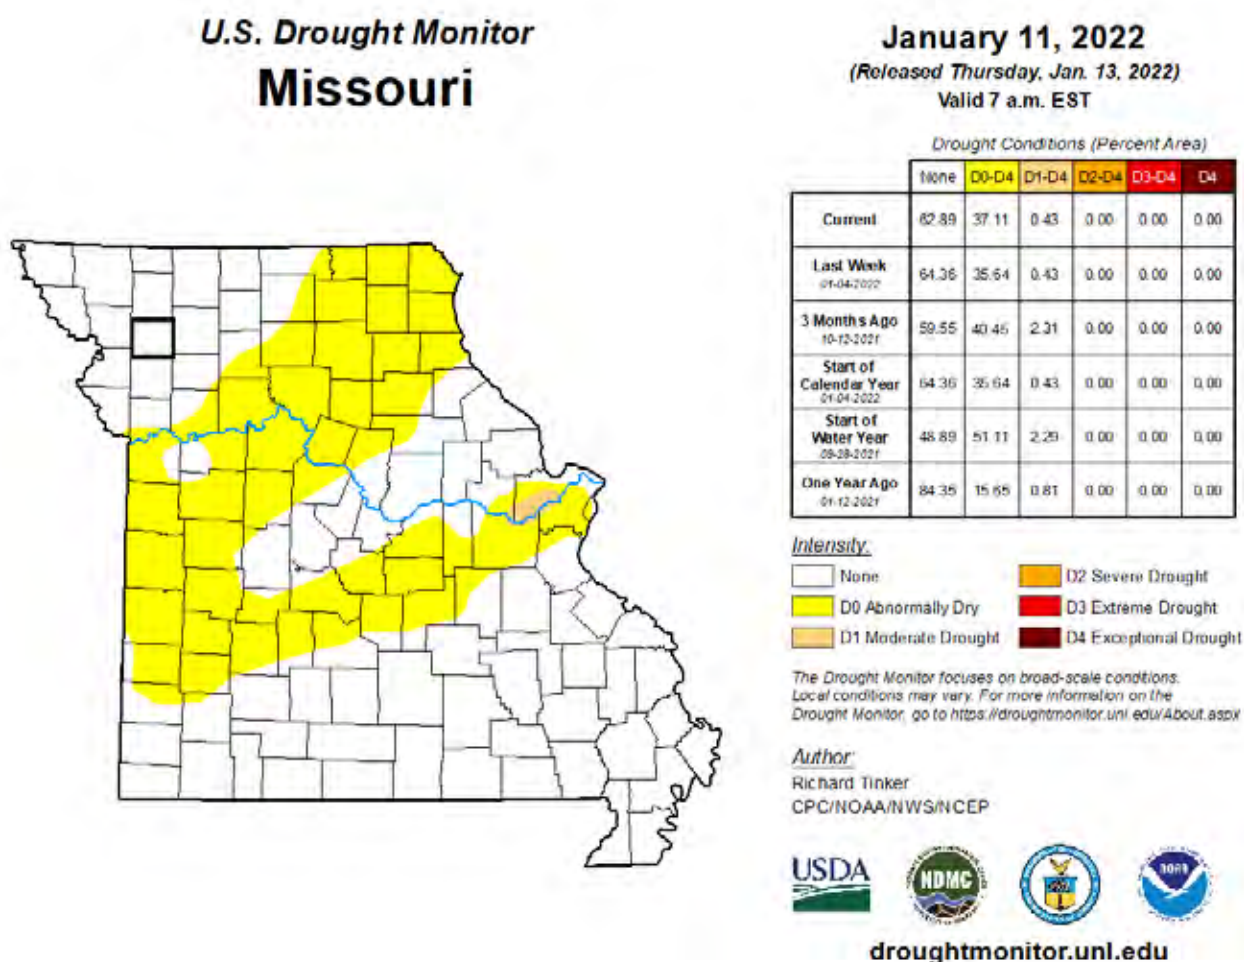

Drought is generally defined as a condition of moisture levels significantly below normal for an extended period of time over a large area that adversely affects plants, animal life, and humans. A drought period can last for months, years, or even decades. There are four types of drought conditions relevant to Missouri, according to the State Plan, which are as follows.

- Meteorological drought is defined in terms of the basis of the degree of dryness (in comparison to some “normal” or average amount) and the duration of the dry period. A meteorological drought must be considered as region-specific since the atmospheric conditions that result in deficiencies of precipitation are highly variable from region to region.
- Hydrological drought is associated with the effects of periods of precipitation (including snowfall) shortfalls on surface or subsurface water supply (e.g., streamflow, reservoir and lake levels, ground water). The frequency and severity of hydrological drought is often defined on a watershed or river basin scale. Although all droughts originate with a deficiency of precipitation, hydrologists are more concerned with how this deficiency plays out through the hydrologic system. Hydrological droughts are usually out of phase with or lag the occurrence of meteorological and agricultural droughts. It takes longer for precipitation deficiencies to show up in components of the hydrological system such as soil moisture, streamflow, and ground water and reservoir levels. As a result, these impacts also are out of phase with impacts in other economic sectors.
- Agricultural drought focus is on soil moisture deficiencies, differences between actual and potential evaporation, reduced ground water or reservoir levels, etc. Plant demand for water depends on prevailing weather conditions, biological characteristics of the specific plant, its stage of growth, and the physical and biological properties of the soil.
- Socioeconomic drought refers to when physical water shortage begins to affect people.

Geographic Location

The entire planning area is at risk to drought. Drought most directly impacts the agricultural sector. DeKalb County covers 426 square miles and, as of 2017, approximately 315 square miles (74 percent) is land in farm use and 4.5 square miles (1 percent) is water. Of the 201,641 acres of land in farm use, only one farm is irrigated. From 2007 to 2017, the number of farms decreased by 2.7 percent from 978 to 708 but the average size of farms increased by 7.1 percent from 266 acres to 285 acres per farm. The total acreage of farmland decreased by 22 percent from a total of 260,472 acres in 2007 to 201,641 acres in 2017. (Source: https://www.nass.usda.gov/Publications/AgCensus/2017/Full_Report/Volume_1,_Chapter_2_County_Level/Missouri/st29_2_0001_0001.pdf).

Figure 3.19. U.S. Drought Monitor Map of Missouri on January 11, 2022

Source: U.S. Drought Monitor, <https://droughtmonitor.unl.edu/Maps/MapArchive.aspx>

Strength/Magnitude/Extent

The Palmer Drought Indices measure dryness based on recent precipitation and temperature. The indices are based on a “supply-and-demand model” of soil moisture. Calculation of supply is relatively straightforward, using temperature and the amount of moisture in the soil. However, demand is more complicated as it depends on a variety of factors, such as evapotranspiration and recharge rates. These rates are harder to calculate. Palmer tried to overcome these difficulties by developing an algorithm that approximated these rates and based the algorithm on the most readily available data — precipitation and temperature.

The Palmer Index has proven most effective in identifying long-term drought of more than several months. However, the Palmer Index has been less effective in determining conditions over a matter of weeks. It uses a “0” as normal, and drought is shown in terms of negative numbers; for example, negative 2 is moderate drought, negative 3 is severe drought, and negative 4 is extreme drought. Palmer's algorithm also is used to describe wet spells, using corresponding positive numbers.

Palmer also developed a formula for standardizing drought calculations for each individual location based on the variability of precipitation and temperature at that location. The Palmer index can therefore be applied to any site for which sufficient precipitation and temperature data is available.

The USDA's Risk Management Agency tracks insured crop loss payments in the county as a result of drought. **Table 3.20** shows the crop loss payments in DeKalb County from 2011 to 2021. Crop loss payments were the highest in 2012, with a total of \$15,744,334.00 worth of loss.

Table 3.20. Crop Loss Payments in DeKalb County from 2011-2021

| Year | Crop Loss Payment |
|------|-------------------|
| 2021 | \$5,769.00 |
| 2020 | \$98,749.00 |
| 2019 | \$0.00 |
| 2018 | \$7,919,617.00 |
| 2017 | \$726,289.60 |
| 2016 | \$19,738.00 |
| 2015 | \$0.00 |
| 2014 | \$90,647.50 |
| 2013 | \$6,018,363.00 |
| 2012 | \$15,744,334.00 |
| 2011 | \$256,876.00 |

(Source: <http://www.rma.usda.gov/data/cause.html>)

None of the communities in DeKalb County use water from a well as the only source of water. There are no surface water sites in the county (Source: <https://maps.waterdata.usgs.gov/mapper/index.html>).

Previous Occurrences

DeKalb County experienced droughts for 9 months between July 2012 and March 2013, 3 additional months in fall of 2013, and 5 months in the summer of 2018 as shown below in **Table 3.21**. This matches the crop loss data from **Table 3.20**.

Table 3.21. Years of Drought in Clinton County

| Year | Number of Months |
|------|------------------|
| 2018 | 5 months |
| 2013 | 6 months |
| 2012 | 6 months |

(Source: https://www.ncdc.noaa.gov/stormevents/listevents.jsp?eventType=%28Z%29+Drought&beginDate_mm=01&beginDate_dd=01&beginDate_yyyy=2001&endDate_mm=12&endDate_dd=31&endDate_yyyy=2021&county=DE%2BKALB%3A63&hailfilter=0.00&tornfilter=0&windfilter=000&sort=DT&submitbutton=Search&statefips=29%2CMISSOURI)

Probability of Future Occurrence

A 20-year period is used from which to draw data on drought events to obtain a more accurate estimate of probability. Over the 20-year record period, DeKalb County was in a drought for 17 months. There is a total of 240 months in the record period. The calculated risk percent from the number of months of drought and the total number of months in the record period equates to the annual average percentage of 7.08 percent probability of drought occurrence in the county. Although drought is not predictable, long-range outlooks and predicted impacts of climate change could indicate an increased chance of drought persistence and severity.

Changing Future Conditions Considerations

Severe drought, a natural part of Missouri's climate, is a risk to this agriculture-dependent state. Future increases in evaporation rates due to higher temperatures may increase the intensity of

naturally occurring droughts. Although springtime in Missouri is likely to be wetter, summer droughts are likely to be more severe. Higher evaporation and lower summer rainfall are likely to reduce river flows. The drought of 2012 narrowed navigation channels, forced lock closures, and caused dozens of barges to run aground on the Mississippi River along the Missouri shoreline. The resulting impact on navigation cost the region more than \$275 million. The drought of 2012–2013 also threatened municipal and industrial water users along the Missouri River. The number of heavy rainfall events is predicted to increase, yet researchers currently expect little change in total rainfall amounts, indicating that the periods between heavy rainfalls will be marked by an increasing number of dry days. Higher temperatures and increased evapotranspiration increase the likelihood of 3.242 3 Risk Assessment drought. This could lead to agricultural drought and suppressed crop yields.

Vulnerability

Vulnerability Overview

Due to DeKalb County's distance from the Missouri River, the National Drought Mitigation Center determines the county is medium-highly susceptible to drought with a 9.7 percent likelihood of a severe drought. (Source: Missouri Hazard Mitigation Plan 2018 pg. 3.247 https://sema.dps.mo.gov/docs/programs/LRMF/mitigation/MO_Hazard_Mitigation_Plan2018.pdf)

Potential Losses to Existing Development

The National Drought Monitor Center at the University of Nebraska at Lincoln summarized the potential impacts of drought as follows: Drought can create economic impacts on agriculture and related sectors, including forestry and fisheries, because of the reliance of these sectors on surface and subsurface water supplies. In addition to losses in yields in crop and livestock production, drought is associated with increases in insect infestations, plant disease, and wind erosion. Droughts also bring increased problems with insects and disease to forests and reduce growth. The incidence of forest and range fires increases substantially during extended droughts, which in turn place both human and wildlife populations at higher levels of risk. Income loss is another indicator used in assessing the impacts of drought because so many sectors are affected. Finally, while drought is rarely a direct cause of death, the associated heat, dust and stress can all contribute to increased mortality.

Impact of Previous and Future Development

Increases in acreage planted with crops would add to exposure to drought-related agricultural losses. In addition, increases in population result in increased demand for treated water, adding additional strain on water supply systems.

Changing Future Conditions Considerations

A new analysis, performed for the Natural Resources Defense Council, examined the effects of climate change on water supply and demand in the contiguous United States. The study found that more than 1,100 counties will face higher risks of water shortages by mid-century as a result of climate change. Two of the principal reasons for the projected water constraints are shifts in precipitation and potential evapotranspiration (PET). Climate models project decreases in precipitation in many regions of the U.S., including areas that may currently be described as experiencing water shortages of some degree.

The Natural Resources Defense Council developed a new water supply sustainability index. The risk to water sustainability is based on the following criteria:

- Projected water demand as a share of available precipitation

- Groundwater use as a share of projected available precipitation
- Susceptibility to drought
- Projected increase in freshwater withdrawals
- Projected increase in summer water deficit

The risk to water sustainability for counties meeting two of the criteria are classified as “moderate” while those meeting three of the criteria are classified as “high,” and those meeting four or more are classified as “extreme.” Counties meeting less than two criteria are considered to have low risk to water sustainability. According to the Natural Resources Defense Council, without climate change the water sustainability index for DeKalb County is low. With climate change, the water supply sustainability index increases to moderate (Source: <https://www.nrdc.org/issues/climate-change>).

Hazard Summary by Jurisdiction

Although the probability of drought is the same for the entire county, farming and livestock enterprises in the unincorporated parts of the county would feel the greatest impact. These impacts are mitigated somewhat by the purchase of crop insurance. The communities in DeKalb County are on water systems. However, many rural residents rely on limited source wells, which would be impacted during water shortages. In cities, the drought conditions would be the same as those experienced in rural areas, but the magnitude would be different with only lawns and local gardens impacted. In addition, building foundations could be weakened due to shrinking and expanding soils. School and special districts would be the least impacted by drought, however, those districts in communities with single source wells may experience water shortages prior to those in larger communities.

Problem Statement

Although drought most likely will not cause structural damage, the impact is greatest on the agriculture sector and if persistent enough, could cause reductions in groundwater and water shortages in communities that provide potable water services. Potential solutions to mitigate the impact of drought would be for communities to develop an ordinance to restrict the use of public water resources for non-essential usage, such as landscaping, washing cars, filling swimming pools, etc. during extreme drought periods. Schools can also implement water conservation measures at all district facilities.

3.4.7 Extreme Temperatures

Hazard Profile

Hazard Description

Extreme temperature events, both hot and cold, can impact human health and mortality, natural ecosystems, agriculture, and other economic sectors. According to information provided by FEMA, extreme heat is defined as temperatures that hover 10 degrees or more above the average high temperature for the region, typically during summer months (June-September). Ambient air temperature is one component of heat conditions, with relative humidity being the other. The relationship of these factors creates what is known as the apparent temperature.

Extreme heat can lead to a broad array of injury & illnesses, known as “hyperthermia,” in humans and animals including sunburns, heat stress, heat exhaustion, and heat stroke, in addition to dehydration, see **Table 3.22**.

Table 3.22. Typical Impacts of Extreme Heat

| Heat Index (HI) | Disorder |
|-----------------|---|
| 80-90° F (HI) | Fatigue possible with prolonged exposure and/or physical activity |
| 90-105° F (HI) | Sunstroke, heat cramps, and heat exhaustion possible with prolonged exposure and/or physical activity |
| 105-130° F (HI) | Heatstroke/sunstroke highly likely with continued exposure |

Source: National Weather Service Heat Index Program, www.weather.gov/os/heat/index.shtml

Extreme heat may also cause stress to crops and livestock. Extreme heat can also strain electricity delivery infrastructure overloaded during peak use of air conditioning during extreme heat events. Another type of infrastructure damage from extreme heat is road damage. When asphalt is exposed to prolonged extreme heat, it can cause buckling of asphalt-paved roads, driveways, and parking lots.

Extreme heat can also lead to other environmental and social hazards including:

- Drought & Water Shortages
- Heat Trapping Pollution in Cities
- Domestic Violence & Abuse
- Civil Disturbances & Riots

Extreme cold often accompanies severe winter storms and can lead to health risks in human and animals including hypothermia and frostbite. When combined with high winds from winter storms, extreme cold becomes extreme wind chill, which is hazardous to health and safety. Cold can cause fuel to congeal in storage tanks and supply lines, stopping electric generators. Cold temperatures can also overpower a building’s heating system and cause water and sewer pipes to freeze and rupture. Power outages and unmonitored use of gas fueled heating instruments in efforts to keep warm can also lead to an increased risk of structure fires and CO₂ poisoning. Extreme cold also increases the likelihood for ice jams on flat rivers or streams.

The National Institute on Aging estimates that more than 2.5 million Americans are elderly and especially vulnerable to hypothermia, with isolated elders being most at risk. About 10 percent of people over the age of 65 have some kind of bodily temperature-regulating defect, and 3-4 percent of all hospital patients over 65 are hypothermic.

Also at risk, are those without shelter, those who are stranded, or who live in a home that is poorly

insulated or without heat.

Geographic Location

Extreme temperatures are an area-wide hazard event, and while a planning area may be outside the epicenter of a winter storm event, extreme cold can still impact neighboring communities. In the case of extreme heat, temperatures, and their risk therein, will often not vary across the planning area.

Strength/Magnitude/Extent

The National Weather Service (NWS) has an alert system in place (advisories or warnings) when the Heat Index (Figure 3.20) is expected to have a significant impact on public safety. The expected severity of the heat determines whether advisories or warnings are issued. A common guideline for issuing excessive heat alerts is when for two or more consecutive days: (1) when the maximum daytime Heat Index is expected to equal or exceed 105 degrees Fahrenheit (°F); and (2) the night time minimum Heat Index is 80°F or above. A heat advisory is issued when temperatures reach 105 degrees, and a warning is issued at 115 degrees.

Figure 3.20. Heat Index (HI) Chart

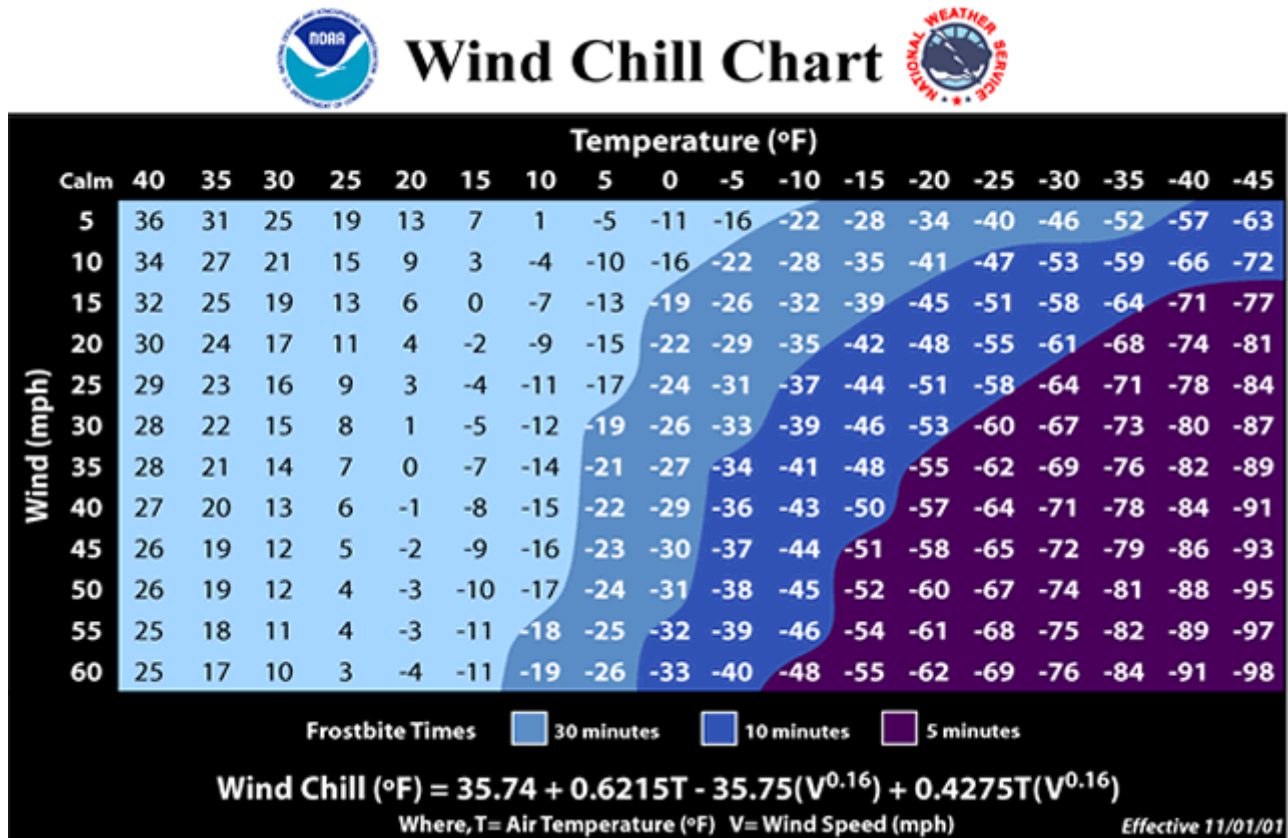

Source: National Weather Service (NWS); <https://www.weather.gov/safety/heat-index>

Note: Exposure to direct sun can increase Heat Index values by as much as 15°F. The shaded zone above 105°F corresponds to a HI that may cause increasingly severe heat disorders with continued exposure and/or physical activity.

The NWS Wind Chill Temperature (WCT) index (Figure 3.21) uses advances in science, technology, and computer modeling to provide an accurate, understandable, and useful formula for calculating the dangers from winter winds and freezing temperatures. The figure below presents wind chill temperatures which are based on the rate of heat loss from exposed skin caused by wind and cold. As the wind increases, it draws heat from the body, driving down skin temperature and eventually the internal body temperature.

Figure 3.21. Wind Chill Chart

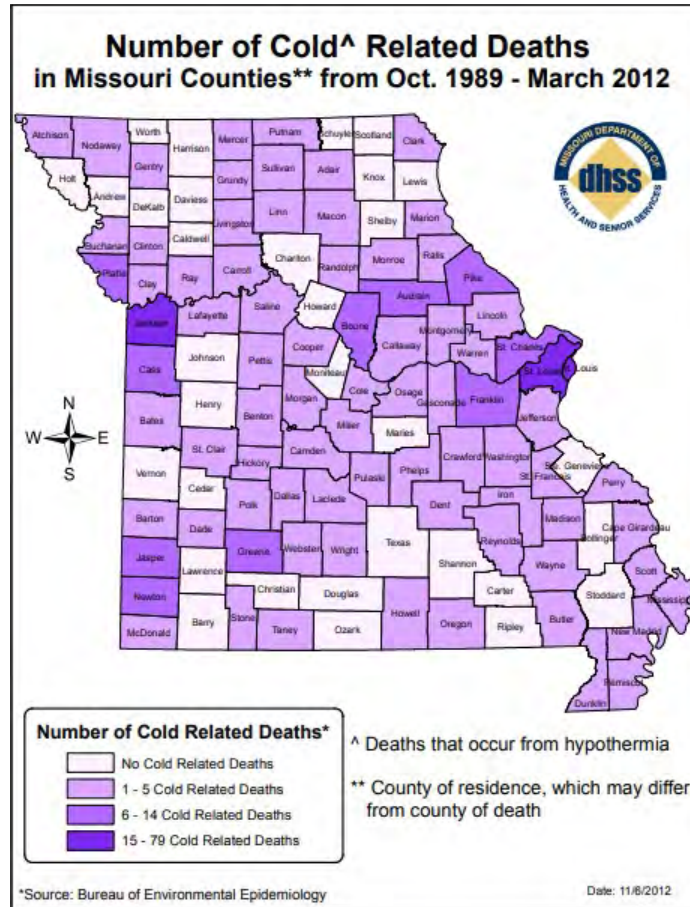

Source: <https://www.weather.gov/safety/cold-wind-chill-chart>

Previous Occurrences

The National Center for Environmental Information data shows 5 extreme temperature events in DeKalb County from 2000 – August 2021, with 3 extreme cold/wind chill events and 2 excessive heat events. Of these events the most recent, and longest, cold event was recorded from February 14-16, 2021 when a cold air mass combined with several inches of snow and winds from 10-20 mph dragged temperatures into the negative double digits in the region. The Maysville area saw record temperature lows for three straight days, dipping to negative 15 degrees. Overall, there were four record cold days for the county in February 2021. The USDA Risk Management Agency documents that in DeKalb County from 2011-2021 there were approximately 2,375 acres of various crops lost due to “cold winter” conditions valued at \$428,031.66. For figures on deaths due to hypothermia cold-related deaths refer to **Figure 3.22**.

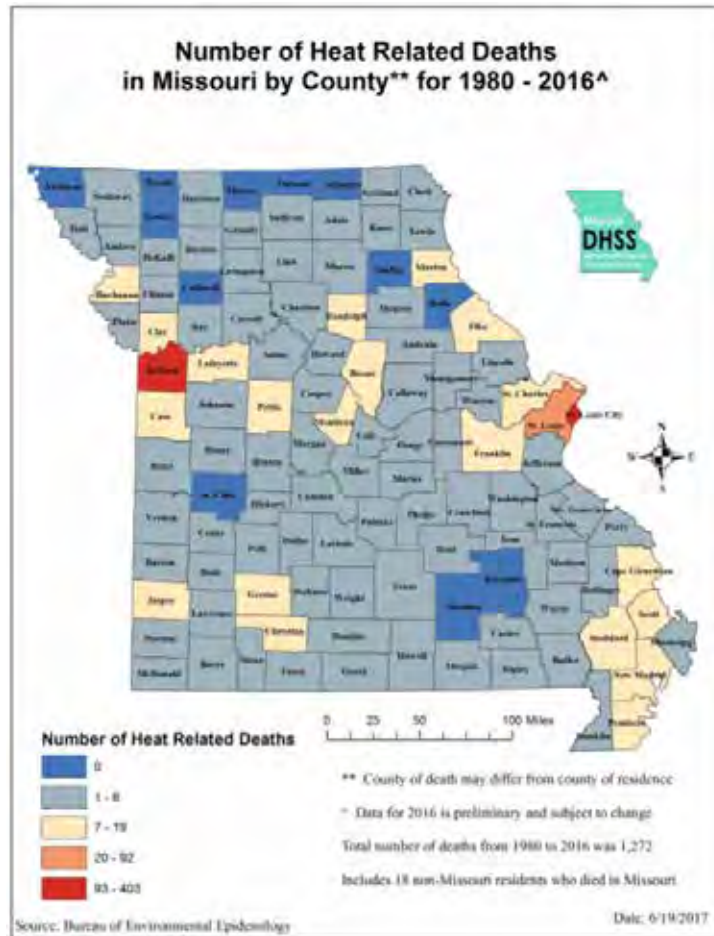

The National Center for Environmental Information dates the most recent extreme heat event as occurring from July 18-25, 2012. During this event the Heat Index in the planning area ranged from 100-110 degrees. The Maysville area saw nine days during July 2012 with record high temperatures as high as 105 degrees. The USDA Risk Management Agency documents that from 2011-2021 there were approximately 2,606 acres of various crops lost due to “heat, and hot wind” conditions valued at \$329,773.97. For figures on deaths due to hyperthermia heat-related deaths refer to **Figure 3.23**. The National Weather Service has stated that among natural hazards, no other natural disaster—not lightning, hurricanes, tornadoes, floods, or earthquakes—causes more deaths.

Figure 3.22. Cold Related Deaths in Missouri October 1989 – March 2012

Source: <https://health.mo.gov/living/healthcondiseases/hypothermia/pdf/hypomap.pdf>

Figure 3.23. Heat Related Deaths in Missouri 2000 - 2016

Source: <https://health.mo.gov/living/healthcondiseases/hyperthermia/pdf/stat-report.pdf>

Probability of Future Occurrence

The probability that an extreme cold event will occur in DeKalb County in any given year is 14%. This equates to dividing 21 years by 3, the number of events during that reporting period. Using this same methodology, the probability that an extreme heat event will occur based on 2 events over 21 years is approximately 10%. Data limitation indicates that extreme heat events could be underreported in the NCDC. See **Table 3.23**.

Table 3.23. Likelihood of Occurrence (Based on Data 2000-2021)

| Type of Event | Total Events | Likelihood of Occurrence (Total/21 years) |
|---------------|--------------|---|
| Extreme Heat | 2 | 0.10 |
| Extreme Cold | 3 | 0.14 |

Source: 2018 MO State Hazard Mitigation Plan

Changing Future Conditions Considerations

The 2018 Missouri Hazard Mitigation Plan notes that as greenhouse emissions increase, the projected daily temperature is expected to increase at an exponential rate. Given this, it will be important for the planning area population to be made more aware of threats faced from hyperthermia-based overheating illnesses, such as dehydration and heat stroke and heat stress. Higher temperatures will also lead to greater strains on the electric grid as electric cooling demand grows, which could in turn lead to a preponderance of rolling blackouts.

The Climate Explorer modeling tool created by the NOAA gives a projection of what average daily max temperatures could look like if greenhouse emissions continue to rise. The blue line, representing lowered emissions, projects a steady increase in temperature, but one that does not vary much from average temperatures in decades past. The red line, representing higher emissions, keeps pace with the blue line at first but, by the 2040s, the variance between the two lines is 5 degrees warmer on average and increases in intensity with each decade. See **Figure 3.24**.

Figure 3.24. Maysville, MO – Project Avg Daily Max Temp (°F)

Source: <https://crt-climate-explorer.nemac.org/>

Vulnerability

Vulnerability Overview

Those at greatest risk for heat-related illness include infants and children up to five years of age, people 65 years of age and older, people who are overweight, and people who are ill or on certain medications. Children's bodies warm 3-5 times faster than that of adults, which is why being left in a hot car can be especially deadly for them.

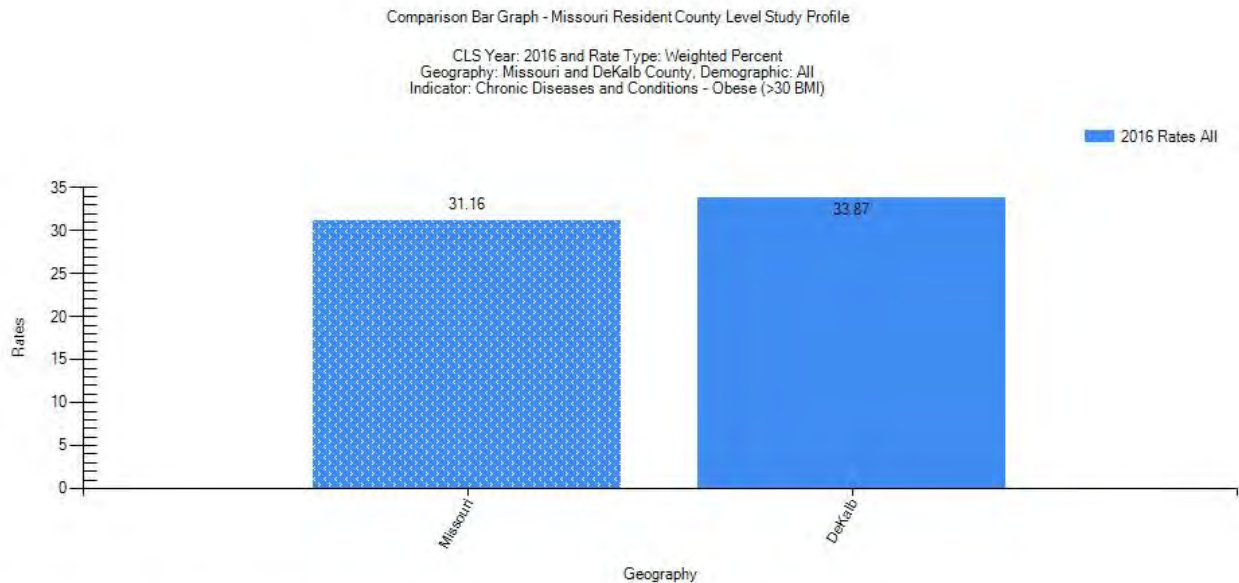

According to U.S. census data, 16.6% percent of DeKalb County's overall population is aged 65 or older, which the 2018 Missouri plan rates as a medium-low risk. The groups that may be a greater risk factor for the county though are the obese and cigarette smokers. **Figure 3.25** shows that based on 2016 data from Missouri Department of Health and Senior Services, the county obesity rate (33.87%) is 2.7 percent higher than the overall state average (31.16%). **Figure 3.26** also shows that

based on the same data, the county prevalence of cigarette smoking (26.17%) is 4.29 percent higher than the state average (21.88%). Cigarette smokers are particularly at risk from the adverse health effects of extreme temperatures because they have decreased circulation capabilities, impacting their ability to regulate their internal body temperature.

However, even young and healthy individuals are susceptible if they participate in strenuous physical activities during hot weather. In agricultural areas, the exposure of farm workers, as well as livestock, to extreme temperatures is a major concern. Overall, it is important to note that when it comes to conditions involved with more severe exposure to extreme temperatures, such as frostbite, heat stroke, and dehydration, health impacts can be long-term when they result in tissue and organ damage.

Based on the vulnerability ratings from the 2018 Missouri Hazard Mitigation Plan, DeKalb is rated as having “low” vulnerability for both extreme heat and extreme cold events.

Figure 3.25. MO DHSS Missouri and Buchanan County Obesity Rates (2016)

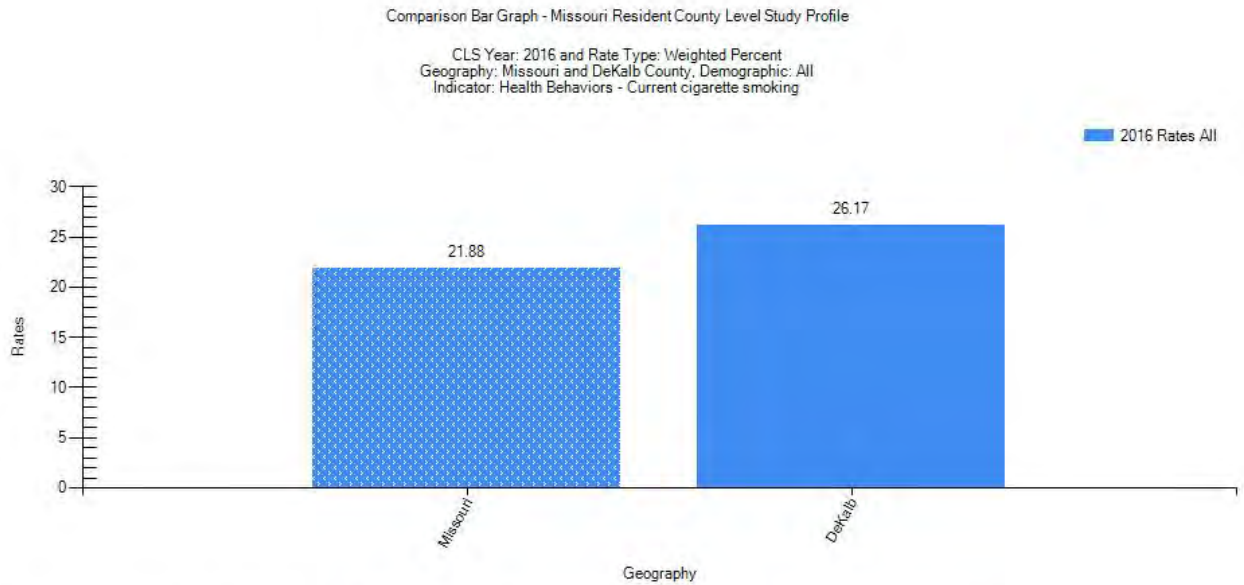

Rates are considered unreliable when based on less than 50 events. Please check corresponding event counts before interpreting the rates shown here.

Potential Losses to Existing Development

Historical data on livestock loss is difficult to project, but data is widely available from the USDA Risk Management Agency on crop loss. For the decade of 2011-2020, crop losses for DeKalb County due to extreme temperatures averaged 475.61 acres valued at \$72,230.87 per year, as seen in **Table 3.24** For a more specific example of how extreme temperatures impacted crop loss, refer to examples of extreme heat and extreme cold from 2012 and 2014 in the “Previous Occurrences” section.

It is also important to consider the longevity of electric power infrastructure, as extreme heat can lead to an increased demand from consumers and overload of a system, while extreme cold and winter conditions can pose a threat to delivery infrastructure.

Table 3.24. Average Annual Crop Loss in DeKalb Co., MO Due to Extreme Temperatures (2011-2020)

| Type of Weather | Acreage Loss | Value |
|------------------------------|--------------|-------------|
| Extreme Cold (Cold Winter) | 237.45 | \$42,803.17 |
| Extreme Heat (Heat) | 238.16 | \$29,427.70 |
| Extreme Temperatures Overall | 475.61 | \$72,230.87 |

Source: USDA Risk Management Association Risk of Crop Loss

Impact of Previous and Future Development

DeKalb County's median age is 40.4 years and the population is not currently showing signs of growth, so any increased demand on heating or cooling resources will be dependent on climate and economic factors. Factors to consider for future development might be the rate of weatherization in buildings if they are up to electrical wiring code. **Figure 3.27** depicts the breakdown of the age of structures in throughout the county, showing that the majority of buildings were constructed in between 1970-1979. A significant amount of structures built in 1939 or earlier does exist, which may require significant modernization upgrades for heating and cooling. **Figure 3.28** shows that the vast majority of housing units in DeKalb County rely on electricity as their heating fuel source, which would put these units at risk in the event of an electrical outage or grid failure during a winter storm.

Figure 3.27. Age of Buildings in DeKalb County

Building Age of Housing Units

Figure 3.28. Heating Fuel for Housing Units in DeKalb County, MO (2019)

Heating Fuel for Housing Units

Source: U.S. Census, American Community Survey 2019

Hazard Summary by Jurisdiction

Those at greatest risk for heat-related illness and deaths include children up to five years of age, people 65 years of age and older, people who are overweight, and people who are ill or on certain medications. To determine jurisdictions within the planning area with populations more vulnerable to extreme heat, demographic data was obtained from the 2010 census on population percentages in each jurisdiction comprised of those under age 5 and over age 65. Data was not available for overweight individuals and those on medications who could be vulnerable to extreme heat. **Table 3.25** below summarizes vulnerable populations in the participating jurisdictions. Note that school and special districts are not included in the table because students and those working for the special districts are not customarily in these age groups. According to survey feedback from the Maysville and Union Star School Districts, all of their facilities have some air conditioning capabilities present.

Table 3.25. DeKalb County Population Under Age 5 and Over Age 65, 2019 American Community Survey

| Jurisdiction | Population Under 5 yrs | Population 65 yrs and over |
|-----------------------|------------------------|----------------------------|
| *DeKalb County | 571 (4.6%) | 2,083 (16.6%) |
| Village of Amity | 0 (0%) | 14 (58.3%) |
| City of Clarksdale | 16 (6.8%) | 59 (24.9%) |
| City of Maysville | 80 (6.4%) | 206 (16.6%) |
| City of Osborn | 24 (6.3%) | 66 (17.4%) |
| City of Stewartsville | 75 (10.2%) | 93 (12.7%) |
| City of Union Star | 36 (8%) | 64 (14.3%) |
| City of Weatherby | 6 (8.5%) | 20 (28.2%) |

Source: U.S. Census Bureau, (*) includes entire population of each city or county

Problem Statement

While DeKalb County is rated as having an overall low risk for extreme temperature events, demographic factors combined with aging electrical infrastructure could increase risks over time. The county has an aging population with above average measures for health risk factors such as obesity and cigarette smoking, all of which impact the ability to regulate body temperature under extreme conditions. The quantity of aging buildings also poses a risk for electrical hazards both in terms of community power outages from overloading or damage to electrical infrastructure, and in the potential to push individuals and families to rely more on heating sources that could introduce flame or carbon monoxide poisoning risks.

Education can play a significant role in mitigation. If individuals know that in the summer months, regardless of heat index, that they should apply sunblock and ensure they travel with water, then this could reduce the chances of short-term hyperthermia health risks or long-term risks like skin cancer. **Figure 3.29** gives an example of hyperthermia warning signs from the National Weather Service (NWS). It is also vitally important that any educational services or materials are multi-lingual, particularly for Spanish speakers. The NWS as well as state and federal DHSS have an abundance of multi-lingual extreme temperature education resources, even for social media awareness.

Figure 3.29. NWS Hyperthermia Symptoms Guide

Source: <https://www.weather.gov/safety/heat-illness>

Residents of the county should also be aware of the risks of using vehicles in extreme temperatures. The NWS advises to prepare travel safety kits in case one is trapped in the cold or heat. Keeping automobiles fueled to at least a half-tank of gas and having necessary tools, nutrition, clothing, and a back-up batter for electronics in case of becoming stuck or stranded due to cold or heat.

Child safety with vehicles is also an important educational opportunity. Families and community members should know the importance of ensuring children are not left in or around unattended vehicles for risk of carbon monoxide poisoning or developing a heat stroke. Helpful tips can include remembering to lock vehicles, knowing where keys are, and even using notes or some kind of reminder on the dash or front-passenger seat of a vehicle as a reminder to check for children before exiting the vehicle.

Education and training for farmers could be helpful as well in best practices to prepare for extreme weather and what resources, financial or otherwise, might be available to them to either protect crops and livestock or recover after an extreme temperature event.

The most useful source of education might be for those who live with or near seniors. While it is important that seniors are aware that they are at greater risk, it is even more important that those around them are aware. It can be as simple as knowing to check on the elderly in the summer and

winter, encouraging neighbors to shovel their sidewalk, or even helping connect them to food pantry resources if they will have difficulty leaving their house.

For at-risk populations, such as the elderly or homeless, DeKalb County has developed 1 facility, the DeKalb County Senior Citizens Council Building, that doubles as a cooling & warming center 7 facilities in Maysville. Investing in water fountains with the ability to easily fill water bottles might also be advisable.

Data and technology resources for communities may also be helpful. OSHA has developed a heat index mobile app for Android and IOS devices that can deliver precise community measurements and offer specific safety advice for work and outdoor activities depending on the severity of the heat. Specific tools like this can help individuals and families make decisions to mitigate their own risks. Text alerts are already a useful community safety tool as well and could help provide directions to warming and cooling centers as well.

Finally, funding resources to prepare for extreme temperatures could help the most with mitigation. Funding to improve and maintain HVAC equipment in buildings, as well as updating electrical infrastructure can improve efficiency and reduce the risk of outages or fires. Assistance providing CO₂ detectors to make them as common as normal smoke detectors could also increase safety and reduce risk. Additionally, assistance providing backup generators could help to ensure critical facilities have at least some access to power in the event of an outage related to extreme temperatures where such an outage could potentially extend over days.

3.4.8 Severe Thunderstorms Including High Winds, Hail, and Lightning

Hazard Profile

Hazard Description

Thunderstorms

A thunderstorm is defined as a storm that contains lightning and thunder which is caused by unstable atmospheric conditions. When cold upper air sinks and warm moist air rises, storm clouds or 'thunderheads' develop resulting in thunderstorms. This can occur singularly, as well as in clusters or lines. The National Weather Service defines a thunderstorm as "severe" if it includes hail that is one inch or more, or wind gusts that are at 58 miles per hour or higher. At any given moment across the world, there are about 1,800 thunderstorms occurring. Severe thunderstorms most often occur in Missouri in the spring and summer, during the afternoon and evenings, but can occur at any time. Other hazards associated with thunderstorms are heavy rains resulting in flooding (discussed separately in **Section 3.4.1**) and tornadoes (discussed separately in **Section 3.4.10**).

High Winds

A severe thunderstorm can produce winds causing as much damage as a weak tornado. The damaging winds of thunderstorms include downbursts, microbursts, and straight-line winds. Downbursts are localized currents of air blasting down from a thunderstorm, which induce an outward burst of damaging wind on or near the ground. Microbursts are minimized downbursts covering an area of less than 2.5 miles across. They include a strong wind shear (a rapid change in the direction of wind over a short distance) near the surface. Microbursts may or may not include precipitation and can produce winds at speeds of more than 150 miles per hour. Damaging straight-line winds are high winds across a wide area that can reach speeds of 140 miles per hour.

Lightning

All thunderstorms produce lightning which can strike outside of the area where it is raining and is has been known to fall more than 10 miles away from the rainfall area. Thunder is simply the sound that lightning makes. Lightning is a huge discharge of electricity that shoots through the air causing vibrations and creating the sound of thunder.

Hail

According to the National Oceanic and Atmospheric Administration (NOAA), hail is precipitation that is formed when thunderstorm updrafts carry raindrops upward into extremely cold atmosphere causing them to freeze. The raindrops form into small frozen droplets. They continue to grow as they come into contact with super-cooled water which will freeze on contact with the frozen rain droplet. This frozen droplet can continue to grow and form hail. As long as the updraft forces can support or suspend the weight of the hailstone, hail can continue to grow before it hits the earth.

At the time when the updraft can no longer support the hailstone, it will fall down to the earth. For example, a $\frac{1}{4}$ " diameter or pea sized hail requires updrafts of 24 miles per hour, while a $2\frac{3}{4}$ " diameter or baseball sized hail requires an updraft of 81 miles per hour. According to the NOAA, the largest hailstone in diameter recorded in the United States was found in Vivian, South Dakota on July 23, 2010. It was eight inches in diameter, almost the size of a soccer ball. Soccer-ball-sized hail is the exception, but even small pea-sized hail can do damage.

Geographic Location

Thunderstorms/high winds/hail/lightning events are an area-wide hazard that can happen anywhere in the county. Although these events occur similarly throughout the planning area, they are more frequently reported in more urbanized areas. In addition, damages are more likely to occur in more densely developed urban areas. **Figure 3.30** shows lightning frequency in the state. DeKalb County, identified with a black dot, is located in the orange zone on the map, indicating a 12-20 average flash density per square kilometer each year. Much of the state is in the same zone.

Strength/Magnitude/Extent

Severe thunderstorm losses are usually attributed to the associated hazards of hail, winds, lightning and heavy rains. Losses due to hail and high wind are typically insured losses that are localized and do not result in presidential disaster declarations. However, in some cases, impacts are severe and widespread making federal assistance necessary. Hail and wind have devastating impacts on crops. Severe thunderstorms/heavy rains that lead to flooding are discussed in the flooding hazard profile. Hailstorms cause damage to property, crops, and the environment, and can injure and even kill livestock. In the United States, hail causes more than \$1 billion in damage to property and crops each year. Even relatively small hail can destroy plants in a matter of minutes. Vehicles, roofs of buildings and homes, and landscaping are also commonly damaged by hail. Hail has been known to cause injury, occasionally fatal, to humans.

In general, assets in DeKalb County vulnerable to thunderstorms with lightning, high winds, and hail include people, crops, vehicles, and structures. Although this hazard results in high annual losses, private property insurance and crop insurance usually cover most losses. When considering insurance coverage as a recovery capability, the overall financial impact on jurisdictions is reduced.

Most lightning damages occur to electronic equipment located inside buildings. Structural damage can also occur when a lightning strike causes a building fire. In addition, lightning strikes can cause crop damages if fields or forested lands are set on fire. Communications equipment and warning transmitters and receivers can also be rendered useless by lightning strikes.

Based on information provided by the Tornado and Storm Research Organization (TORRO), **Table 3.26** below describes typical damage impacts of the various sizes of hail.

Table 3.26. Tornado and Storm Research Organization Hailstorm Intensity Scale

| Intensity Category | Diameter (mm) | Diameter (inches) | Size Description | Typical Damage Impacts |
|----------------------|---------------|-------------------|----------------------------|--|
| Hard Hail | 5-9 | 0.2-0.4 | Pea | No damage |
| Potentially Damaging | 10-15 | 0.4-0.6 | Mothball | Slight general damage to plants, crops |
| Significant | 16-20 | 0.6-0.8 | Marble, grape | Significant damage to fruit, crops, vegetation |
| Severe | 21-30 | 0.8-1.2 | Walnut | Severe damage to fruit and crops, damage to glass and plastic structures, paint and wood scored |
| Severe | 31-40 | 1.2-1.6 | Pigeon's egg > squash ball | Widespread glass damage, vehicle bodywork damage |
| Destructive | 41-50 | 1.6-2.0 | Golf ball > Pullet's egg | Wholesale destruction of glass, damage to tiled roofs, significant risk of injuries |
| Destructive | 51-60 | 2.0-2.4 | Hen's egg | Bodywork of grounded aircraft dented, brick walls pitted |
| Destructive | 61-75 | 2.4-3.0 | Tennis ball > cricket ball | Severe roof damage, risk of serious injuries |
| Destructive | 76-90 | 3.0-3.5 | Large orange > Soft ball | Severe damage to aircraft bodywork |
| Super Hailstorms | 91-100 | 3.6-3.9 | Grapefruit | Extensive structural damage. Risk of severe or even fatal injuries to persons caught in the open |
| Super Hailstorms | >100 | 4.0+ | Melon | Extensive structural damage. Risk of severe or even fatal injuries to persons caught in the open |

Source: Tornado and Storm Research Organization (TORRO), Department of Geography, Oxford Brookes University
 Notes: In addition to hail diameter, factors including number and density of hailstones, hail fall speed and surface wind speeds affect severity. <http://www.torro.org.uk/site/hscale.php>

Straight-line winds are defined as any thunderstorm wind that is not associated with rotation (i.e., is not a tornado). It is these winds, which can exceed 100 miles per hour, which represent the most common type of severe weather. They are responsible for most wind damage related to thunderstorms. Since thunderstorms do not have narrow tracks like tornadoes, the associated wind damage can be extensive and affect entire (and multiple) counties. Objects like trees, barns, outbuildings, high-profile vehicles, and power lines/poles can be toppled or destroyed, and roofs, windows, and homes can be damaged as wind speeds increase.

The onset of thunderstorms with lightning, high wind, and hail is generally rapid. Duration is less than six hours and warning time is generally six to twelve hours. Nationwide, lightning kills 75 to 100 people each year. Lightning strikes can also start structural and wildland fires, as well as damage electrical systems and equipment.

Previous Occurrences

The tables below summarize past crop damages as indicated by crop insurance claims. The tables illustrate the magnitude of the impact on the planning area’s agricultural economy.

Thunderstorms and lightning were not listed as the cause of loss for any insurance claims in DeKalb County from 2010-2020.

Table 3.27. Crop Insurance Claims Paid in DeKalb County from High Winds, 2010-2020

| Crop Year | Crop Name | Cause of Loss Description | Insurance Paid |
|--------------|-----------|---------------------------|---------------------|
| 2011 | Corn | Wind/Excess Wind | \$302,881.00 |
| 2011 | Soybeans | Wind/Excess Wind | \$21,289.00 |
| Total | | | \$324,170.00 |

Table 3.28. Crop Insurance Claims Paid in DeKalb County from Hail, 2010-2020.

| Crop Year | Crop Name | Cause of Loss Description | Insurance Paid |
|--------------|-----------|---------------------------|------------------|
| 2011 | Soybeans | Hail | \$53,778 |
| 2012 | Corn | Hail | \$12,773 |
| 2012 | Corn | Hail | \$84,495 |
| 2012 | Soybeans | Hail | \$19,901 |
| 2012 | Soybeans | Hail | \$18,881 |
| 2013 | Wheat | Hail | \$50,727 |
| 2013 | Soybeans | Hail | \$1,106 |
| 2013 | Soybeans | Hail | \$4,188 |
| 2015 | Wheat | Hail | \$3,427 |
| 2015 | Soybeans | Hail | \$2,094 |
| 2016 | Corn | Hail | \$2,229 |
| 2016 | Soybeans | Hail | \$11,671.00 |
| 2019 | Corn | Hail | \$5,843.00 |
| Total | | | \$271,113 |

USDA Risk Management Agency, Insurance Claims, <https://www.rma.usda.gov/data/cause>

The tables below include NCEI reported events and damages for the past 21 years for thunderstorms, wind, and hail. There were 56 days with recorded thunderstorm wind events in

DeKalb County, of which caused \$15,050 in property damages and two injuries. **Table 3.29** only lists thunderstorm wind events that involved recorded property damage or injuries.

Table 3.29. NCEI Thunderstorm Wind Events in DeKalb County, 2000-2020

| Jurisdiction | Date | Wind Speed (in knots) | Injuries | Property Damage |
|---------------|-----------|-----------------------|----------|--------------------|
| Osborn | 4/02/2010 | 61 | 0 | \$5,000 |
| Clarksdale | 6/18/2010 | 52 | 0 | \$3,000 |
| Osborn | 6/26/2011 | 52 | 0 | \$300 |
| Osborn | 6/26/2011 | 57 | 0 | \$2,000 |
| Weatherby | 2/28/2012 | 52 | 0 | \$3,000 |
| Stewartsville | 5/24/2012 | 52 | 0 | \$1,000 |
| Osborn | 5/19/2013 | 52 | 0 | \$250 |
| Osborn | 6/3/2014 | 60 | 2 | \$0 |
| Union Star | 6/3/2014 | 52 | 0 | \$500 |
| Total: | | | | \$15,050.00 |

There were 52 days with recorded hail (one inch and larger) events in DeKalb County, causing no reported injuries and \$10,000 total in recorded property damage. **Table 3.30** only lists hail events with hail over two inches in diameter.

Table 3.30. NCEI Hail Events in DeKalb County, 2000-2020

| Jurisdiction | Date | Hail size (inches) | Injuries | Property Damage |
|---------------|-----------|--------------------|----------|-----------------|
| Weatherby | 5/24/2004 | 2 | 0 | 0 |
| Maysville | 5/24/2004 | 2.75 | 0 | \$10,000 |
| Weatherby | 6/7/2009 | 2 | 0 | 0 |
| Union Star | 6/7/2009 | 2 | 0 | 0 |
| Stewartsville | 5/6/2012 | 2.75 | 0 | \$0 |
| Osborn | 5/19/2019 | 2.50 | 0 | \$0 |
| Maysville | 5/19/2019 | 2.5 | 0 | \$0 |
| Total | | | | \$10,000 |

Probability of Future Occurrence

Thunderstorm Wind: There have been 56 recorded thunderstorm events over a 21-year period from 2000-2020. This equates to 2.7 thunderstorm wind events in any given year with a 100 percent probability of occurrence. There were eight events that resulted in \$15,050 in property damages. This equates to 3.8 damaging events per year with annualized losses of \$531.56.

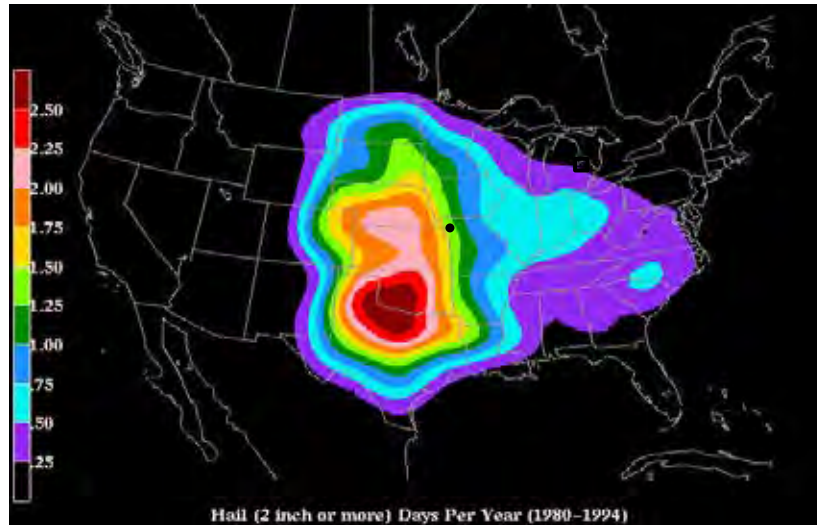

Lightning: There were no NCEI reported events for lightning. One limitation of NCEI reported lightning events is the fact that only those that result in fatality, injury, and/or property and crop damage are reported.

Hail: There has been 52 recorded hail events over a 21-year period from 2000-2020. This equates to 2.48 hail events in any given year with a 10 percent probability of occurrence. There was one recorded event that resulted in property damage from hail. This equates to .48 damaging events per year with annualized losses of \$476.19.

Strong Wind: There were no NCEI reported events for strong wind; therefore, there were no annualized losses. This is likely underreported.

Figure 3.32 is based on hailstorm data from 1980-1994. It shows the probability of hailstorm occurrence (2" diameter or larger) based on number of days per year. DeKalb County, identified by a black dot, is located in the light green zone, indicating the county's probability of a hailstorm with 2" diameter or larger hail is 1.25 to .50 days per year.

Figure 3.32. Annual Hailstorm Probability (2" diameter or larger), 1980- 1994

Changing Future Conditions Considerations

According to the 2018 State Hazard Mitigation Plan, NASA's Earth Observatory provides an analysis on how climate change could, theoretically, increase potential storm energy by warming the surface and putting more moisture in the air through evaporation.

The presence of warm, moist air near the surface is a key ingredient for summer storms that meteorologists have termed "convective available potential energy," or CAPE. With an increase in CAPE, there is greater potential for cumulus clouds to form. The study also counters this theory with the theory that warming in the Arctic could lead to less wind shear in the mid-latitude areas prone to summer storms, making the storms less likely.

Predicted increases in temperature could help create atmospheric conditions that are fertile breeding grounds for severe thunderstorms and tornadoes in Missouri and DeKalb County. Possible impacts include an increased risk to life and property in both the public and private sectors. Public utilities and manufactured housing developments will be especially prone to damages. Jurisdictions already affected should be prepared for more of these events and should thus prioritize mitigation actions such as construction of safe rooms for vulnerable populations, retrofitting and/or hardening existing structures, improving warning systems and public education, and reinforcing utilities and additional critical infrastructure. Source: MO Hazard Mitigation Plan, pp. 3.293-3.294

Vulnerability

Vulnerability Overview

Severe thunderstorm losses are usually attributed to the associated hazards of hail, downburst winds, lightning and heavy rains. Losses due to hail and high wind are typically insured losses that are localized and do not result in presidential disaster declarations. However, in some cases, impacts are severe and widespread and assistance outside state capabilities is necessary. Hail

and wind also can have devastating impacts on crops. Severe thunderstorms/heavy rains that lead to flooding are discussed in the flooding hazard profile. Hailstorms cause damage to property, crops, and the environment, and can injure and even kill livestock. In the United States, hail causes more than \$1 billion in damage to property and crops each year. Even relatively small hail can shred plants to ribbons in a matter of minutes. Vehicles, roofs of buildings and homes, and landscaping are also commonly damaged by hail. Hail has been known to cause injury to humans, occasionally fatal injury.

In general, assets in DeKalb County vulnerable to thunderstorms with lightning, high winds, and hail include people, crops, vehicles, and built structures. Although this hazard can result in high annual losses, private property insurance and crop insurance usually cover the majority of losses. Considering insurance coverage as a recovery capability, the overall impact on jurisdictions is reduced.

Most lightning damages occur to electronic equipment located inside buildings. But structural damage can also occur when a lightning strike causes a building fire. In addition, lightning strikes can cause damages to crops, if fields or forested lands are set on fire. Communications equipment and warning transmitters and receivers can also be knocked out by lightning strikes. Source:

<http://www.vaisala.com/en/products/thunderstormandlightningdetectionsystems/Pages/NLDN.aspx> and <http://www.lightningsafety.noaa.gov/>

The method used to determine vulnerability to severe thunderstorms across Missouri, including in DeKalb County, was statistical analysis of data from several sources: National Centers for Environmental Information (NCEI) storm events data (1996 to December 31, 2016), HAZUS Building Exposure Value data, housing density and mobile home data from the U.S. Census (2015 ACS), and the calculated Social Vulnerability Index for Missouri Counties from the Hazards and Vulnerability Research Institute in the Department of Geography at the University of South Carolina. From the statistical data collected, six factors were considered in determining overall vulnerability to lightning as follows: housing density, building exposure, percentage of mobile homes, social vulnerability, likelihood of occurrence, and average annual property loss. Based on natural breaks in the statistical data, a rating value of 1 through 5 was assigned to each factor. These rating values correspond to the following descriptive terms: 1) Low 2) Low-medium 3) Medium 4) Medium-high 5) High

According to this method, DeKalb County has a low vulnerability rating for thunderstorms, including high wind, hail, and lightning as detailed in **Tables 3.31-3.32** below.

Table 3.31. Housing Density, Building Exposure, SOVI, and Mobile Home Data by County

| County | Total Building Exposure (Hazus) | Building Exposure Rating | Housing Density | Housing Density Rating | SOVI Ranking | SOVI Ranking Rating | Percent Mobile Homes | Percent Mobile Homes Rating |
|---------------|---------------------------------|--------------------------|-----------------|------------------------|--------------|---------------------|----------------------|-----------------------------|
| DeKalb County | \$1,090,102,000 | 1 | 10.21 | 1 | Low | 1 | 4.6 | 4 |

Table 3.32. Number of High Wind, Hail, and Lightning Events, Likelihood of Occurrence, and Associated Ratings

| County | HIGH WIND | | | HAIL | | | LIGHTNING | | |
|--------|-------------------|--------------------------|---------------------------------|-------------------|--------------------------|---------------------------------|-------------------|--------------------------|---------------------------------|
| | Total # of Events | Likelihood of Occurrence | Likelihood of Occurrence Rating | Total # of Events | Likelihood of Occurrence | Likelihood of Occurrence Rating | Total # of Events | Likelihood of Occurrence | Likelihood of Occurrence Rating |
| DeKalb | 53 | 2.524 | 1 | 97 | 4.619 | 2 | 0 | 0.000 | 1 |

Source: 2018 Mo State Hazard Mitigation Plan, p. 3.300

Potential Losses to Existing Development

The average annual loss determined from historical losses for high wind and hail are indicators of the potential losses to existing development. While a limited number of high wind events have been recorded in DeKalb County, they have the potential to damage private property and commercial buildings. Based on the \$25,050.00 in recorded losses from thunderstorm wind and hail damage recorded in the NCEI database from 2000-2020, potential losses for future events are annualized at \$1,192.86.

Previous and Future Development

Additional development would result in the exposure of more households and businesses vulnerable to damages from severe thunderstorms/high winds/lightning/hail.

Hazard Summary by Jurisdiction

Although thunderstorms/high winds/lightning/hail events are area-wide, there may be demographics indicating higher losses in one jurisdiction as compared to another. Structures built before 1939 are considered more vulnerable to the impact of high wind and hail damage. Please see **Table 3.27** for ages of structures in jurisdictions in DeKalb County.

Problem Statement

The NCEI Storm Events Database notes over 100 thunderstorm wind/hail events in DeKalb County over the past 21 years with around \$25,000 dollars in damages.

Poorly built structures, barns, and outbuildings are more vulnerable to the impact of high winds during thunderstorms. High winds can topple utility poles and lead to power outages. Both high winds and hail can damage roofs. Possible solutions include review of local ordinance and building codes to address high winds and/or construction techniques to include structural bracing, straps and clips, or anchor bolts.

Hail can also damage crops and dent cars and trucks. People are also at risk of injury and death during high wind events. Crop insurance mitigates the risk to farmers and the agriculture sector within the county.

The risk of injury and death in the county can be mitigated by identifying safe refuge areas in public buildings, nursing homes and other facilities that house vulnerable populations that do not have a saferoom. Retrofitting school district facilities to better withstand high winds will provide more

protection for students and staff.

Additional warnings and alerts will also provide the public and schools more time to take cover during high wind events. Education and hazard awareness programs would also increase public safety in the event of severe thunderstorm events.

3.4.1 Severe Winter Weather

Hazard Profile

Hazard Description

A major winter storm can last for several days and be accompanied by high winds, freezing rain or sleet, heavy snowfall, and cold temperatures. The National Weather Service describes different types of winter storm events as follows.

- **Blizzard**—Winds of 35 miles per hour or more with snow and blowing snow reducing visibility to less than ¼ mile for at least three hours.
- **Blowing Snow**—Wind-driven snow that reduces visibility. Blowing snow may be falling snow and/or snow on the ground picked up by the wind.
- **Snow Squalls**—Brief, intense snow showers accompanied by strong, gusty winds. Accumulation may be significant.
- **Snow Showers**—Snow falling at varying intensities for brief periods of time. Some accumulation is possible.
- **Freezing Rain**—Measurable rain that falls onto a surface with a temperature below freezing. This causes it to freeze to surfaces, such as trees, cars, and roads, forming a coating or glaze of ice. Most freezing-rain events are short lived and occur near sunrise between the months of December and March.
- **Sleet**—Rain drops that freeze into ice pellets before reaching the ground. Sleet usually bounces when hitting a surface and does not stick to objects.

Geographic Location

The entire county is vulnerable to heavy snow, ice, extreme cold temperatures, and freezing rain. **Figure 3.33** shows the zones of average number of hours of freezing rain per year. DeKalb County is located in the light-yellow zone, indicating that the county receives three to six hours of freezing rain per year.

Figure 3.33. NWS Statewide Average Number of Hours per Year with Freezing Rain

(Source: American Meteorological Society. "Freezing Rain Events in the United States." <http://ams.confex.com/ams/pdfpapers/71872.pdf>)

Strength/Magnitude/Extent

Severe winter storms include heavy snowfall, ice, and strong winds which can push the wind chill well below zero degrees in the planning area.

For severe weather conditions, the National Weather Service issues some or all of the following products as conditions warrant across the State of Missouri. NWS local offices in Missouri may collaborate with local partners to determine when an alert should be issued for a local area.

- Winter Weather Advisory — Winter weather conditions are expected to cause significant inconveniences and may be hazardous. If caution is exercised, these situations should not become life threatening. Often the greatest hazard is to motorists.
- Winter Storm Watch — Severe winter conditions, such as heavy snow and/or ice are possible within the next day or two.
- Winter Storm Warning — Severe winter conditions have begun or are about to begin.
- Blizzard Warning — Snow and strong winds will combine to produce a blinding snow (near zero visibility), deep drifts, and life-threatening wind chill.
- Ice Storm Warning -- Dangerous accumulations of ice are expected with generally over one quarter inch of ice on exposed surfaces. Travel is impacted, and widespread downed trees and power lines often result.
- Wind Chill Advisory -- Combination of low temperatures and strong winds will result in wind chill readings of -20 degrees F or lower.
- Wind Chill Warning -- Wind chill temperatures of -35 degrees F or lower are expected. This is a life-threatening situation.

Previous Occurrences

Table 3.33 includes NCEI reported events and damages for the past 25 years in DeKalb County. There were 110 days with reported events.

Table 3.33. NCEI DeKalb County Winter Weather Events Summary, 1997-2021

| Type of Event | Inclusive Dates | Magnitude | # of Injuries | Property Damages | Crop Damages |
|-------------------------|-----------------------|---|---------------|------------------|--------------|
| Cold/Wind Chill | 01/10/1997-01/13/1997 | Wind Chill as low as 30-50 below zero | 0 | \$0 | \$0 |
| Winter Storm | 02/21/1997 | 1-5 in. of snow | 0 | \$0 | \$0 |
| Heavy Snow | 04/10/1997-04/11/1997 | 6-12 in. of snow | 0 | \$100,000 | \$0 |
| Ice Storm | 12/21/1997 | Icy road conditions | 0 | \$0 | \$0 |

Source: NCEI, data accessed 12/08/2021

Winter Storms occur regularly on an annual basis in DeKalb County, Missouri. Five disasters for severe winter storms were declared between 2000 – 2022. February 6, 2002 (DR-1403), December 12, 2007 (EM-3281), December 27, 2007 (DR-1736), January 30, 2009 (EM-3303) and March 23, 2011 (DR-1961).

Winter storms, cold, frost and freezing take a toll on crop production in the planning area. **Table 3.34** shows the USDA's Risk Management Agency payments for insured crop losses in the planning area as a result of cold conditions and snow for the past 10 years.

Table 3.34. Crop Insurance Claims Paid in DeKalb County as a Result of Cold Conditions and Snow 2011-2021

| Crop Year | Crop Name | Cause of Loss Description | Insurance Paid (\$) |
|-----------|-----------|---------------------------|---------------------|
| 2011 | Wheat | Cold Wet Weather | \$38,071.75 |
| 2011 | Wheat | Cold Wet Weather | \$25,339.05 |
| 2011 | Corn | Cold Wet Weather | \$28,294 |
| 2011 | Corn | Cold Wet Weather | \$8,044 |
| 2011 | Soybeans | Cold Wet Weather | \$2,106 |
| 2012 | Wheat | Cold Wet Weather | \$1,164 |

| Total | | | \$668,599.46 |

Source: USDA Risk Management Agency, <https://www.rma.usda.gov/data/cause>

Probability of Future Occurrence

The probability for all the different types of winter weather is included as one probability, since one storm generally includes several different types of events. There were 58 severe winter weather events in DeKalb County from 1996 to 2021 (25 years). This equates to a 232% probability of occurrence in any given year with approximately 2 events in any given year.

Changing Future Conditions Considerations

A shorter overall winter season and fewer days of extreme cold may have both positive and negative indirect impacts. Warmer winter temperatures may result in changing distributions of native plant and animal species and/or an increase in pests and non-native species. Warmer winter temperatures will result in a reduction of lake ice cover. Reduced lake ice cover impacts aquatic ecosystems by raising water temperatures. Water temperature is linked to dissolved oxygen levels and many other environmental parameters that affect fish, plant, and other animal populations. A lack of ice cover also leaves lakes exposed to wind and evaporation during a time of year when they are normally protected. As both temperature and precipitation increase during the winter months, freezing rain will be more likely. Additional wintertime precipitation in any form will contribute to saturation and

increase the risk and/or severity of spring flooding. A greater proportion of wintertime precipitation may fall as rain rather than snow. (Source: 2018 Missouri State Hazard Mitigation Plan, Chapter 3, Section 3.3.1, Changing Future Conditions Considerations, page 3.338)

Vulnerability

Vulnerability Overview

Heavy snow can bring a community to a standstill by inhibiting transportation (in whiteout conditions), weighing down utility lines, and by causing structural collapse in buildings not designed to withstand the weight of the snow. Repair and snow removal costs can be significant. Ice buildup can collapse utility lines and communication towers, as well as make transportation difficult and hazardous. Ice can also become a problem on roadways if the air temperature is high enough that precipitation falls as freezing rain rather than snow.

Buildings with overhanging tree limbs are more vulnerable to damage during winter storms when limbs fall. Businesses experience loss of income as a result of closure during power outages. In general, heavy winter storms increase wear and tear on roadways though the cost of such damages is difficult to determine. Businesses can experience loss of income as a result of closure during winter storms.

Overhead power lines and infrastructure are also vulnerable to damages from winter storms. In particular ice accumulation during winter storm events damage to power lines due to the ice weight on the lines and equipment. Damages also occur to lines and equipment from falling trees and tree limbs weighted down by ice. Potential losses could include cost of repair or replacement of damaged facilities and lost economic opportunities for businesses.

Secondary effects from loss of power could include burst water pipes in homes without electricity during winter storms. Public safety hazards include risk of electrocution from downed power lines. Specific amounts of estimated losses are not available due to the complexity and multiple variables associated with this hazard. Standard values for loss of service for utilities reported in FEMA's 2009 BCA Reference Guide, the economic impact as a result of loss of power is \$126 per person per day of lost service.

Potential Losses to Existing Development

From 1997-2021, a total of \$350,000 in property loss was attributed to Winter Weather Events. That is an average of \$14,000 per year. From 2011-2021, a total of \$182,004 in crop insurance payments were issued due to Winter Weather Events. This averages to \$66,859.95 annually.

Previous and Future Development

Future commercial development can expect functional downtime and decreased revenues during periods of severe winter weather. Road construction in the county will increase the need for snow removal and salt to keep transportation lifelines open during periods of severe winter weather.

Hazard Summary by Jurisdiction

Severe winter weather can cause power outages and put structures at risk to fires when individuals in homes resort to using portable fuel heaters. The risk of extreme cold deaths and frostbite varies among segments of the populations. People over 65 and those living below the poverty level have an increased vulnerability to severe winter weather. **Table 3.35** includes information on populations over 65 and the percent living below the poverty level by jurisdiction.

Table 3.35. Population over 65 and Population Living Below the Poverty Level

| Jurisdiction | % of Families Living Below Poverty Level | % of Population Over 65 |
|-----------------------|---|--------------------------------|
| DeKalb County | 8.5% | 16.6% |
| Village of Amity | 0% | 58.3% |
| City of Clarksdale | 15.9% | 24.9% |
| City of Maysville | 6.7% | 16.6% |
| City of Osborn | 0% | 17.4% |
| City of Stewartsville | 10.7% | 12.7% |
| City of Union Star | 14.6% | 14.3% |
| Village of Weatherby | 36.8% | 28.2% |

Source: US Census Bureau American Community Survey 5-year 2015-2019

The Village of Weatherby is the jurisdiction with the highest percent of families living below the poverty line. Amity has the highest percentage of population over 65.

Problem Statement

Heavy snow can bring a community to a standstill by inhibiting transportation (in whiteout conditions), weighing down utility lines, and by causing structural collapse in buildings not designed to withstand the weight of the snow. Repair and snow removal costs can be significant. Ice buildup can collapse utility lines and communication towers, as well as make transportation difficult and hazardous. People over 65 and those living in poverty and the homeless have an increased risk of hypothermia and frostbite due to extreme cold and wind chill.

Public works departments and road districts can develop snow removal plans and maintain adequate snow removal equipment and salt to quickly open roads after periods of heavy snow and freezing rain. The county and cities can work with local electric coops and utility companies to develop vegetation management programs in rights of way to minimize damage to falling tree limbs laden with ice resulting from ice storms to minimize power outages throughout the county.

3.4.2 Tornado

Hazard Profile

Hazard Description

Essentially, tornadoes are a vortex storm with two components of winds. The first is the rotational winds that can measure up to 500 miles per hour, and the second is an uplifting current of great strength. The dynamic strength of both these currents can cause vacuums that can overpressure structures from the inside.

Although tornadoes have been documented in all 50 states, most of them occur in the central United States. The unique geography of the central United States allows for the development of thunderstorms that spawn tornadoes. The jet stream, which is a high-velocity stream of air, determines which area of the central United States will be prone to tornado development. The jet stream normally separates the cold air of the north from the warm air of the south. During the winter, the jet stream flows west to east from Texas to the Carolina coast. As the sun “moves” north, so does the jet stream, which at summer solstice flows from Canada across Lake Superior to Maine. During its move northward in the spring and its recession south during the fall, the jet stream crosses Missouri, causing the large thunderstorms that breed tornadoes.

Tornadoes spawn from the largest thunderstorms. The associated cumulonimbus clouds can reach heights of up to 55,000 feet above ground level and are commonly formed when Gulf air is warmed by solar heating. The moist, warm air is overridden by the dry cool air provided by the jet stream. This cold air presses down on the warm air, preventing it from rising, but only temporarily. Soon, the warm air forces its way through the cool air and the cool air moves downward past the rising warm air. This air movement, along with the deflection of the earth’s surface, can cause the air masses to start rotating. This rotational movement around the location of the breakthrough forms a vortex, or funnel. If the newly created funnel stays in the sky, it is referred to as a funnel cloud. However, if it touches the ground, the funnel officially becomes a tornado.

A typical tornado can be described as a funnel-shaped cloud that is “anchored” to a cloud, usually a cumulonimbus that is also in contact with the earth’s surface. This contact on average lasts 30 minutes and covers an average distance of 15 miles. The width of the tornado (and its path of destruction) is usually about 300 yards. However, tornadoes can stay on the ground for upward of 300 miles and can be up to a mile wide. The National Weather Service, in reviewing tornadoes occurring in Missouri between 1950 and 1996, calculated the mean path length at 2.27 miles and the mean path area at 0.14 square mile.

The average forward speed of a tornado is 30 miles per hour but may vary from nearly stationary to 70 miles per hour. The average tornado moves from southwest to northeast, but tornadoes have been known to move in any direction. Tornadoes are most likely to occur in the afternoon and evening but have been known to occur at all hours of the day and night.

Geographic Location

Due to the nature of tornadoes, they can occur anywhere in DeKalb County.

Strength/Magnitude/Extent

Tornadoes are the most violent of all atmospheric storms and are capable of tremendous destruction. Wind speeds can exceed 250 miles per hour and damage paths can be more than one mile wide and 50 miles long. Tornadoes have been known to lift and move objects weighing more than 300 tons a distance of 30 feet, toss homes more than 300 feet from their foundations, and siphon millions of tons

of water from water bodies. Tornadoes also can generate a tremendous amount of flying debris or “missiles,” which often become airborne shrapnel that causes additional damage. If wind speeds are high enough, missiles can be thrown at a building with enough force to penetrate windows, roofs, and walls. However, the less spectacular damage is much more common.

Tornado magnitude is classified according to the EF- Scale (or the Enhanced Fujita Scale, based on the original Fujita Scale developed by Dr. Theodore Fujita, a renowned severe storm researcher). The EF-Scale (see **Table 3.36**) attempts to rank tornadoes according to wind speed based on the damage caused. This update to the original F Scale was implemented in the U.S. on February 1, 2007.

Table 3.36. Enhanced F Scale for Tornado Damage

| FUJITA SCALE | | | DERIVED EF SCALE | | OPERATIONAL EF SCALE | |
|--------------|----------------------|---------------------|------------------|---------------------|----------------------|---------------------|
| F Number | Fastest ¼-mile (mph) | 3 Second Gust (mph) | EF Nu | 3 Second Gust (mph) | EF Number | 3 Second Gust (mph) |
| 0 | 40-72 | 45-78 | 0 | 65-85 | 0 | 65-85 |
| 1 | 73-112 | 79-117 | 1 | 86-109 | 1 | 86-110 |
| 2 | 113-157 | 118-161 | 2 | 110-137 | 2 | 111-135 |
| 3 | 158-207 | 162-209 | 3 | 138-167 | 3 | 136-165 |
| 4 | 208-260 | 210-261 | 4 | 168-199 | 4 | 166-200 |
| 5 | 261-318 | 262-317 | 5 | 200-234 | 5 | Over 200 |

Source: The National Weather Service, www.spc.noaa.gov/faq/tornado/ef-scale.html

The wind speeds for the EF scale and damage descriptions are based on information on the NOAA Storm Prediction Center as listed in **Table 3.37**. The damage descriptions are summaries. For the actual EF scale, it is necessary to look up the damage indicator (type of structure damaged) and refer to the degrees of damage associated with that indicator. Information on the Enhanced Fujita Scale’s damage indicators and degrees of damage is located online at www.spc.noaa.gov/efscale/ef-scale.html.

Table 3.37. Enhanced Fujita Scale with Potential Damage

| Enhanced Fujita Scale | | | |
|-----------------------|------------------|--------------------|--|
| Scale | Wind Speed (mph) | Relative Frequency | Potential Damage |
| EF0 | 65-85 | 53.5% | Light. Peels surface off some roofs; some damage to gutters or siding; branches broken off trees; shallow-rooted trees pushed over. Confirmed tornadoes with no reported damage (i.e. those that remain in open fields) are always rated EF0). |
| EF1 | 86-110 | 31.6% | Moderate. Roofs severely stripped; mobile homes overturned or badly damaged; loss of exterior doors; windows and other glass broken. |
| EF2 | 111-135 | 10.7% | Considerable. Roofs torn off well-constructed houses; foundations of frame homes shifted; mobile homes complete destroyed; large trees snapped or uprooted; light object missiles generated; cars lifted off ground. |
| EF3 | 136-165 | 3.4% | Severe. Entire stores of well-constructed houses destroyed; severe damage to large buildings such as shopping malls; trains overturned; trees debarked; heavy cars lifted off the ground and thrown; structures with weak foundations blown away some |
| EF4 | 166-200 | 0.7% | Devastating. Well-constructed houses and whole frame houses completely levelled; cars thrown and small missiles generated. |
| EF5 | >200 | <0.1% | Explosive. Strong frame houses levelled off foundations and swept away; automobile-sized missiles fly through the air in excess of 300 ft.; steel reinforced concrete structure badly damaged; high rise buildings have significant structural deformation; incredible phenomena will occur. |

Source: NOAA Storm Prediction Center, <http://www.spc.noaa.gov/efscale/ef-scale.html>

Enhanced weather forecasting has provided the ability to predict severe weather likely to produce tornadoes days in advance. Tornado watches can be delivered to those in the path of these storms several hours in advance. Lead time for actual tornado warnings is about 30 minutes. Tornadoes have been known to change paths very rapidly, thus limiting the time in which to take shelter. Tornadoes may not be visible on the ground if they occur after sundown or due to blowing dust or driving rain and hail.

Previous Occurrences

Table 3.38 includes NCEI reported tornado events and damages since 1993 in DeKalb County. Prior to that date, only really destructive tornadoes were recorded. There are limitations to the use of NCEI tornado data that must be noted. For example, one tornado may contain multiple segments as it moves geographically. A tornado that crosses a county line or state line is considered a separate segment for the purposes of reporting to the NCEI. Also, a tornado that lifts off the ground for less than 5 minutes or 2.5 miles is considered a separate segment. If the tornado lifts off the ground for greater than 5 minutes or 2.5 miles, it is considered a separate tornado. Tornadoes reported in Storm Data and the Storm Events Database are in segments.

Table 3.38. Recorded Tornadoes in DeKalb County, 1993 – Present

| Date | Beginning Location | Ending Location | Length (miles) | Width (yards) | F/EF Rating | Death | Injury | Property Damage | Crop Damages |
|--------------|--------------------|-----------------|----------------|---------------|-------------|----------|----------|------------------|--------------|

Figure 3.34 shows historic tornado paths in the planning area.

Figure 3.34. DeKalb Map of Historic Tornado Events

Source: DeKalb County HMP, 2018

There are no insurance payments for crop damages because of tornadoes from 2007-2020.

Probability of Future Occurrence

According to the NCEI, 11 documented tornadoes have occurred during the 28-year period from 1993 to 2021, resulting in a probability percentage of 39 percent chance of a tornado of any magnitude event in the planning area in any given year.

Changing Future Conditions Considerations

According to the 2018 State Plan, scientists do not know how the frequency and severity of tornadoes will change. Research published in 2015 suggests that changes in heat and moisture content in the atmosphere, brought on by a warming world, could be playing a role in making tornado outbreaks more common and severe in the U.S. The research concluded that the number of days with large outbreaks has been increasing since the 1950s and that densely concentrated tornado outbreaks are on the rise. It is notable that the research shows that the area of tornado activity is not expanding, but rather the areas already subject to tornado activity are seeing the more densely packed tornadoes. Because Missouri experiences on average around 39.6 tornadoes a year, such research is closely followed by meteorologists in the state.

Vulnerability Overview

Tornado Alley refers to the area of the United States where tornadoes are most likely to occur. Some view it as the area where the most dangerous tornadoes occur, such as F4 and F5 tornadoes on the Fujita rating system, but this is not necessarily true. Most dangerous tornadoes are sporadic. Tornado Alley is in reference to the most frequently reported tornadoes. **Figure 3.35** refers to this area known as Tornado Alley. This area averages three tornadoes or more per year per 10,000 square miles in general. DeKalb County is located in the center of Tornado Alley, which poses a high risk for future tornadoes.

Figure 3.35. Tornado Alley in the U.S.

Source: <http://www.tomadochaser.net/tornalley.html>

Potential Losses to Existing Development

The method used in the 2018 State Plan to determine vulnerability to tornadoes across Missouri included statistical analysis of data from several sources: HAZUS building exposure value data,

population density and mobile home data from the U.S. Census (2015 ACS), the calculated Social Vulnerability Index for Missouri Counties from the Hazards and Vulnerability Research Institute in the Department of Geography at the University of South Carolina, and storm events data (1950 to December 31, 2016) from the National Centers for Environmental Information (NCEI). It is important to realize that one limitation to the NCEI data is that many tornadoes that might have occurred in uninhabited areas, as well as some in inhabited areas, may not have been reported. The incompleteness of the data suggests that it is not appropriate for use in parametric modeling. In addition, NOAA data cannot show a realistic frequency distribution of different Fujita scale tornado events, except for recent years. Thus a parametric model based on a combination of many physical aspects of the tornado to predict future expected losses was not used. The statistical model used for this analysis was probabilistic based purely on tornado frequency and historic losses. It is based on past experience and forecasts the expected results for the immediate or extended future. From the statistical data collected, six factors were considered in determining overall vulnerability to tornadoes as follows: building exposure, population density, social vulnerability, percentage of mobile homes, likelihood of occurrence, and annual property loss. Based on natural breaks in the statistical data, a rating value of 1 through 5 was assigned to each factor. These rating values correspond to the following descriptive terms:

- 1) Low
- 2) Low-medium
- 3) Medium
- 4) Medium-high
- 5) High

Additional details on the methodology can be found in the State Plan, starting on page 3.337.

Table 3.39 below provides the building exposure, population density, SOVI index ranking and percentage of mobile homes by county and the associated vulnerability rating. Based on this data, DeKalb County has a low vulnerability to tornadoes.

Table 3.39. Building Exposure, Population Density, SOVI Index Rating

| Jurisdiction | Total Building Exposure | Exposure Rating | Population Density | Population Rating | SOVI Index Ranking | SOVI Index Rating | Percent Mobile Homes | Mobile Home Rating |
|---------------|-------------------------|-----------------|--------------------|-------------------|--------------------|-------------------|----------------------|--------------------|
| DeKalb County | \$1,090,102,000 | 1 | 30.11 | 1 | Low | 1 | 14.6 | 4 |

Source: Missouri State Plan 2018, pg. 3.379

Previous and Future Development

Since there are currently no major development plans underway in DeKalb County, there is no increased vulnerability to tornadoes based on growth; however, due to the vulnerability of mobile homes to tornado and high wind damage, some jurisdictions do not allow mobile home parks. DeKalb County and local jurisdictions should assess the warning siren coverage in the planning area and seek resources for expanding coverage to underserved areas of the county.

Hazard Summary by Jurisdiction

In DeKalb County, a tornado could occur due to its location in Tornado Alley and historical precedence. The county also has an at-risk population of homes that are valued below \$50,000 (10 percent) and mobile homes (10 percent). These homes are at risk due to the fact that they could have weak structural protection from high winds associated with tornadoes due to lower grade materials used, inadequate construction standards or possible lack of foundation.

Homes that are over 25 years old also face the risk of older building codes and deteriorating structure.

A tornado of any magnitude could have a large, adverse impact on these homes. Because 66.6 percent of homes in DeKalb County were built before 1990 (2015-2019 US Census ACS5-year estimates), the impact of a tornado could be substantial. See **Figure 3.27** for the ages of homes within DeKalb County.

A tornado event could occur anywhere in the planning area, but some jurisdictions would suffer heavier damages because of the age of the housing, concentration of buildings and higher number of mobile homes. School district assets are also at risk from tornadoes, so it is imperative for districts to conduct regular tornado drills.

Problem Statement

Tornadoes are the most violent of all atmospheric storms and are capable of tremendous destruction. Wind speeds can exceed 250 miles per hour and damage paths can be more than one-mile wide and 50 miles long. According to the NCEI, over the past 28 years significant tornado events in DeKalb County have resulted in three deaths, six injuries and \$390,000 in property damage. Information in the 2018 State Plan indicates that DeKalb County has a low vulnerability to tornadoes based on frequency of occurrence and previous damages.

The risk of property damage, injury, and death in the county can be mitigated by constructing FEMA safe rooms in facilities that house vulnerable populations such as nursing homes, government buildings, and schools. In addition, identifying safe refuge areas in public buildings, nursing homes and other facilities that house vulnerable populations that do not have a safe room could reduce risk. Retrofitting school district facilities with protective filming of windows and installation of blast proof doors will provide more protection for students and staff at school facilities. Additional warnings and alerts will also provide the public and schools more time to take cover during a tornado. In addition, public safety fairs provide an opportunity to disseminate information to homeowners about individual safe room construction in homes. Cities can adopt or update and enforce IBC 2012 building codes that include construction techniques such as roof tie down straps for mobile homes to mitigate damage to future development.

3.4.3 Wildfire

Hazard Profile

Hazard Description

The incident types considered for urban/structural fire include all fires in the following categories: 1) general fires, 2) structure fire, 3) fire in mobile property used as a fixed structure, and 4) mobile property (vehicle) fire. The fire incident types for wildfires include: 1) natural vegetation fire, 2) outside rubbish fire, 3) special outside fire, and 4) cultivated vegetation, crop fire.

The Missouri Division of Fire Safety (MDFS) indicates that approximately 80 percent of the fire departments in Missouri are staffed with volunteers. Whether paid or volunteer, these departments are often limited by lack of resources and financial assistance. The impact of a fire to a single-story building in a small community may be as great as that of a larger fire to a multi-story building in a large city.

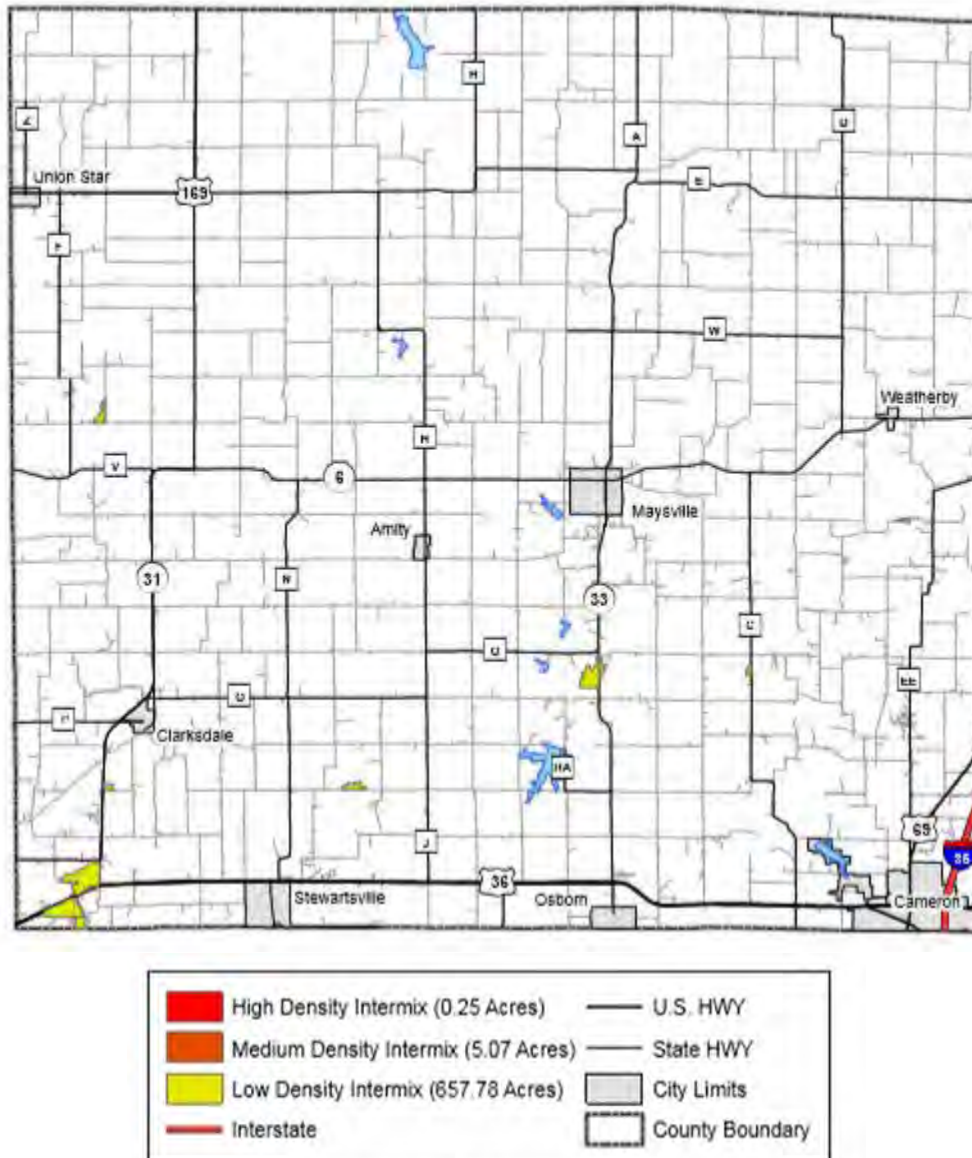

The Forestry Division of the Missouri Department of Conservation (MDC) is responsible for protecting privately owned and state-owned forests and grasslands from wildfires. To accomplish this task, eight forestry regions have been established in Missouri for fire suppression. The Forestry Division works closely with volunteer fire departments and federal partners to assist with fire suppression activities. Currently, more than 900 rural fire departments in Missouri have mutual aid agreements with the Forestry Division to obtain assistance in wildfire protection if needed.

Most of Missouri fires occur during the spring season between February and May. The length and severity of both structural and wildland fires depend largely on weather conditions. Spring in Missouri is usually characterized by low humidity and high winds. These conditions result in higher fire danger. In addition, due to the recent lack of moisture throughout many areas of the state, conditions are likely to increase the risk of wildfires. Drought conditions can also hamper firefighting efforts, as decreasing water supplies may not prove adequate for firefighting. It is common for rural residents to burn their garden spots, brush piles, and other areas in the spring. Some landowners also believe it is necessary to burn their forests in the spring to promote grass growth, kill ticks, and reduce brush. Therefore, spring months are the most dangerous for wildfires. The second most critical period of the year is fall. Depending on the weather conditions, a sizeable number of fires may occur between mid-October and late November.

Geographic Location

The risk of structural fire most likely does not vary widely across the planning area. However, damages due to wildfires would be higher in communities with more wildland–urban interface (WUI) areas. The term refers to the zone of transition between unoccupied land and human development and needs to be defined in the plan. Within the WUI, there are two specific areas identified: 1) Interface and 2) Intermix. The interface areas are those areas that abut wildland vegetation and the Intermix areas are those areas that intermingle with wildland areas. **Figure 3.36** is a WUI map of DeKalb County, that identifies the density intermix. Low density intermix is found in a few unincorporated areas in the county. There is no interface in the county.

Figure 3.36. Wildland—Urban Interface and Intermix Areas in DeKalb County

*No interface is present in DeKalb County

Strength/Magnitude/Extent

Structural and urban fires are a daily occurrence throughout the State. Statewide, approximately 100 fatalities occur annually, as well as numerous injuries affecting the lives of the victims, their families, and many others—especially those involved in fire and medical services. Unlike other disasters, structural fires can be caused by human criminal activity: arson. All citizens pay the costs of arson whether through increased insurance rates, higher costs to maintain fire and medical services, or the costs of supporting the criminal justice system.

Wildfires damage the environment, killing some plants and occasionally animals. Firefighters have been injured or killed, and structures can be damaged or destroyed. The loss of plants can heighten the risk of soil erosion and landslides. Although Missouri wildfires are not the size and intensity of those in the Western United States, they could impact recreation and tourism in and near the fires.

Wildland fires in Missouri have been mostly a result of human activity rather than lightning or some other natural event. Wildfires in Missouri are usually surface fires, burning the dead leaves on the ground or dried grasses. They do sometimes “torch” or “crown” out in certain dense evergreen stands like eastern red cedar and shortleaf pine. However, Missouri does not have the extensive stands of evergreens found in the western US that fuel the large fire storms seen on television news stories.

While very unusual, crown fires can and do occur in Missouri native hardwood forests during prolonged periods of drought combined with extreme heat, low relative humidity, and high wind. Tornadoes, high winds, wet snow and ice storms in recent years have placed a large amount of woody material on the forest floor that causes wildfires to burn hotter and longer. These conditions also make it more difficult for firefighters to suppress fires safely.

Often wildfires in Missouri go unnoticed by the general public because the sensational fire behavior that captures the attention of television viewers is rare in the state. Yet, from the standpoint of destroying homes and other property, Missouri wildfires can be quite destructive.

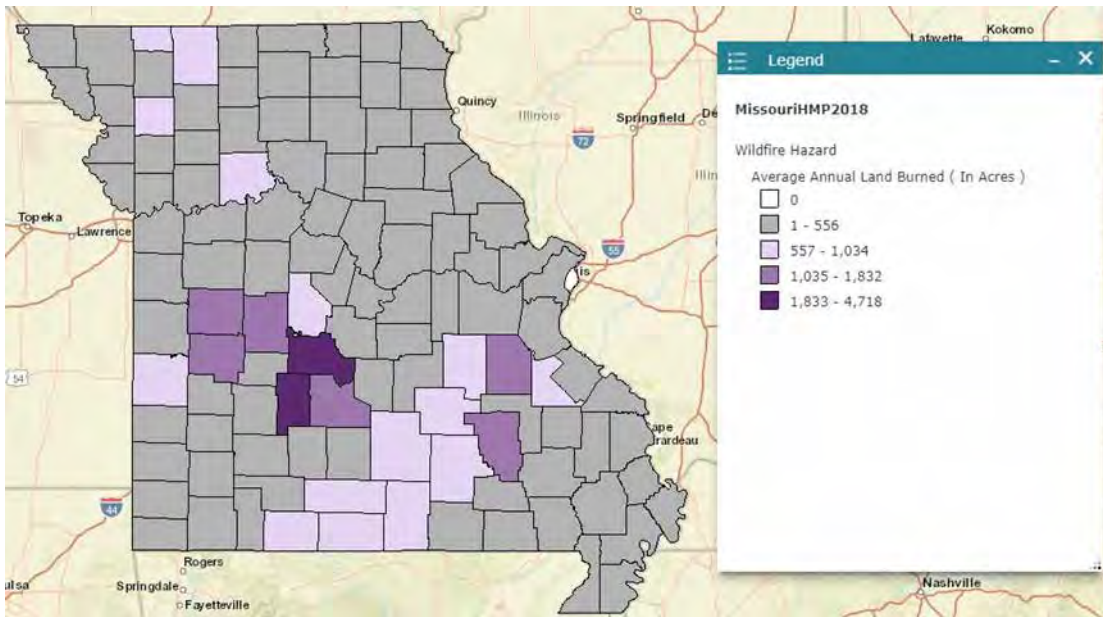

As defined by the National Fire Protection Agency (NFPA), a structure fire is defined as “any fire inside, on, under, or touching a structure.” Factors that can influence the extent and damage of a structural fire include:

- Structure type and age
- Building codes addressing fire prevention, detection, and extinguishments
- Density of development
- Presence of flammable substances
- Fire department response speed
- Firefighting technology
- Training of local fire management officials and firefighters
- Public information about common fire hazards and use of smoke alarms
- Notification techniques and procedures
- Water Pressure & Availability

There are additional economic consequences related to this hazard. Urban fires and explosions may result in lost wages due to temporarily or permanently closed businesses, destruction and damage involving business and personal assets, loss of tax base, recovery costs, and lost investments in destroyed property. In addition to this are of course the immediate need that victims of structural fires may face beyond medical attention, including addressing concerns over food, shelter, and healthcare. As non-profits are almost always seen as the source of response to these concerns, their capacity to absorb this burden is of a critical concern.

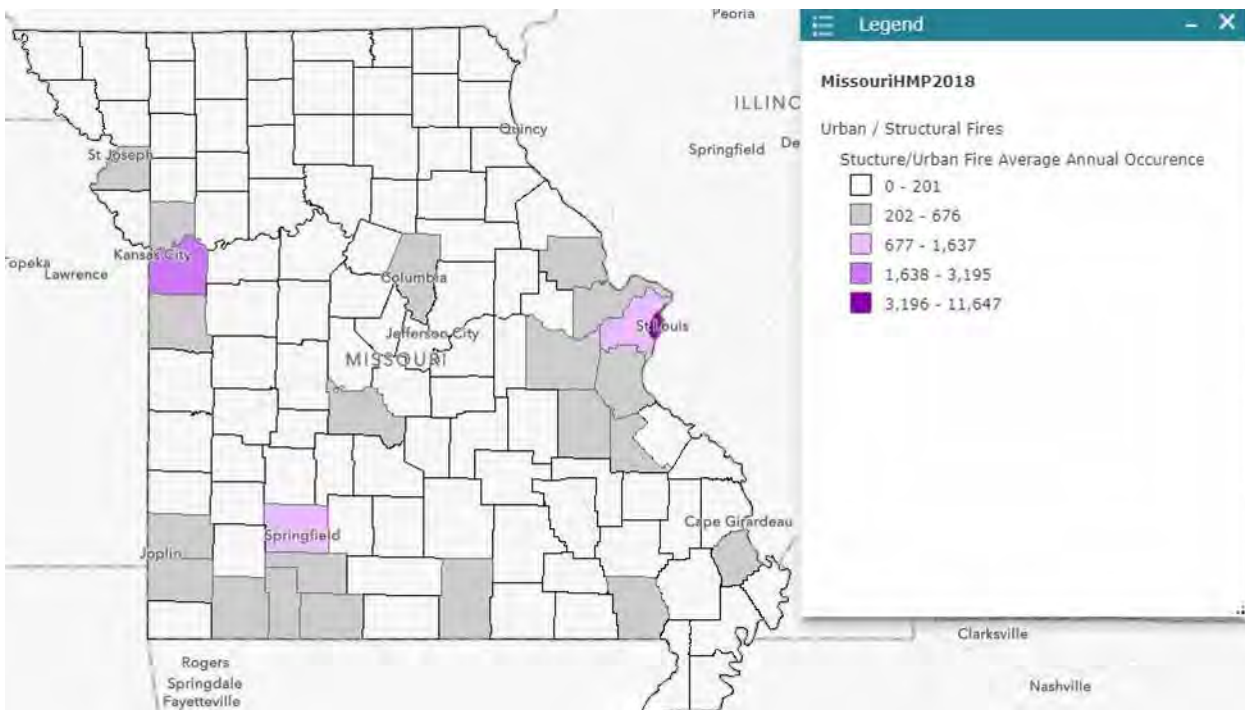

For some context on the danger these hazards present, **Figure 3.37** shows the average number of acres burned per year in each county in Missouri, and **Figure 3.38** shows the average number of structure/urban fires per year in each Missouri county.

Figure 3.37. Average Acres Burned Per Year in Missouri Counties

Previous Occurrences

Table 3.40 records the average number of wildfire incidents recorded by the MDC that occurred over the last decade from 2010-2019 and the average number of acres burned each year.

Table 3.40. Wildfire Incidents and Average Acres Burned in DeKalb County (2010-2020)

| Year | Total Incidents | Total Acres Burned | Avg. Acres Burned/month |
|------|-----------------|--------------------|-------------------------|
| 2010 | 16 | 62 | 3.88 |
| 2011 | 22 | 412 | 18.73 |
| 2012 | 77 | 3,100 | 40.26 |
| 2013 | 16 | 168 | 10.5 |
| 2014 | 23 | 167 | 7.26 |
| 2015 | 43 | 1,285 | 29.88 |
| 2016 | 23 | 2,956 | 128.52 |
| 2017 | 17 | 230 | 13.53 |
| 2018 | 30 | 154.82 | 5.16 |
| 2019 | 3 | 1.34 | 0.45 |
| 2020 | 11 | 149.35 | 13.58 |

Source: <https://mdc12.mdc.mo.gov/Applications/MDCFireReporting/Home/FireReportSearch>

The largest wildfire of the last decade occurred July 19, 2012, near King City, MO. The fire was discovered at 2:10 PM and contained by 5:00 PM with the hand of 7 hand crew members, 3 water unites, 1 fire engine, and 1 tanker. In total 600 acres were consumed in the fire.

Probability of Future Occurrence

Using data from **Table 3.40** and dividing the 281 fires over 11 years from 2010-2020, there is a 25.5% chance of a wildfire happening in any given year in DeKalb County. Stretching across the same period of time if a wildfire does occur it will likely burn 24.7 acres on average. Evens are more likely to occur in wildfire-prone areas experiencing new or additional development.

The Missouri Hazard Mitigation Viewer lists the average number of urban/structural fires occurring annually in DeKalb County as 61. The most determining factor in the future rate of urban/structural fires is the number of aging structures in the county which may not be up to modern fire code standards. Referring to **Figure 3.27** under **Extreme Temperatures (3.4.7)**, one can see there are approximately 781 structures in Maysville that are over 80 years old and could be potential fire risks.

Changing Future Conditions Considerations

The 2018 Missouri Hazard Mitigation Plan describes the future of wildfire activity as being tied to the relationship between prescribed seasonal burning and forest understory growth. As temperatures increase, the prescribed burning season will shorten, and this will lead to a growth in understory vegetation that could fuel future wildfires. Increased droughts will also dry out vegetation, further fueling future wildfires.

The 2018 plan indicates that changes in the climate should not impact the propensity for urban/structural fires greatly as these hazards are more tied to human activity than climate.

Vulnerability

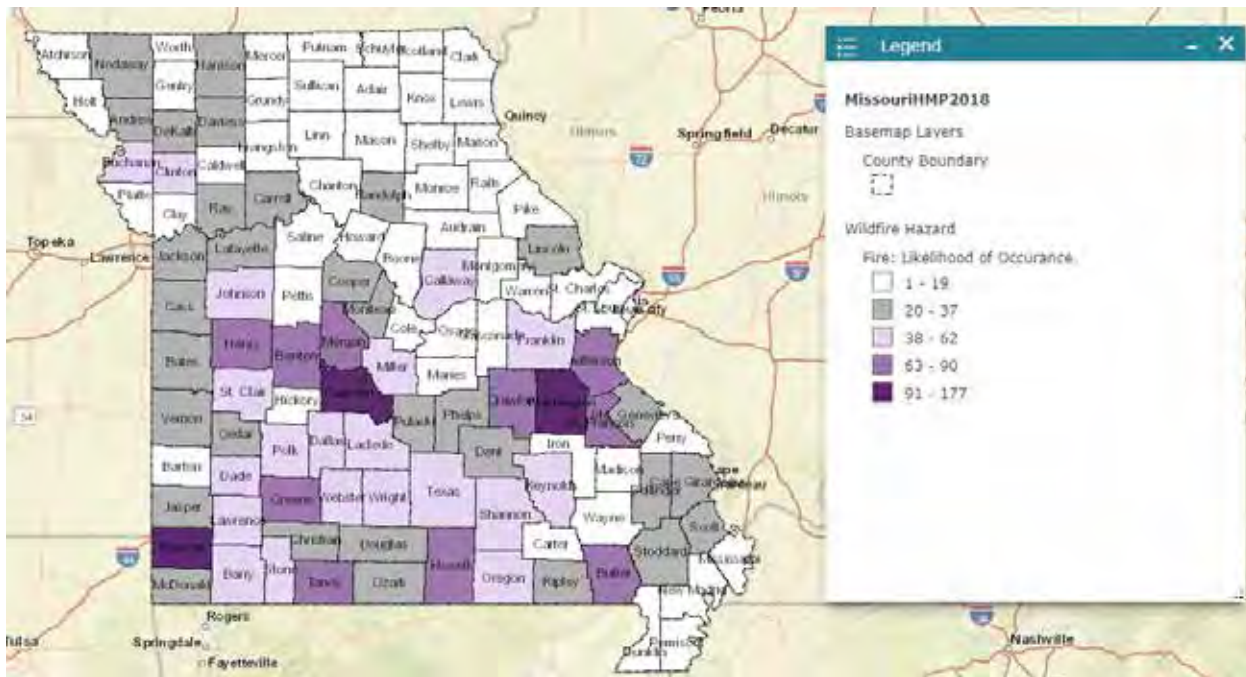

Vulnerability Overview

Using the data reported by the MDC's Wildfire Reporting in **Table 3.40**, there were 281 reported wildfires in DeKalb County from the decade of 2010-2020. Using the methodology from the 2018 MO Hazard Mitigation Plan uses for estimating likelihood of occurrence (# of occurrences/# of years),

DeKalb County is likely to have 26 wildfire incidents in a given year. **Figure 3.39** from the 2018 State Plan demonstrates that like its neighboring counties in the Northwest region, DeKalb County is at a slightly increased risk for wildfire occurrence.

Due to lack of publicly available data on structure fires in DeKalb County, the main point of reference will be the 2018 State Plan, using data from 2002-2012. This plan rated planning areas across six categories, each on a 5-point scale. Overall, DeKalb County scored 7-points, putting it at a Low vulnerability (See **Table 3.41**). Due to the amount of fire departments in Missouri that are staffed mostly with volunteers, roughly 80 percent, the impact of a fire to a single-story building in a small community may be as great as that of a larger fire to a multi-story building in a large city.

Figure 3.39. Likelihood of Wildfire Occurrence by Missouri County

Source: <https://amecei.maps.arcgis.com/apps/webappviewer/index.html?id=d97d80d5cff04996bff54b2250e47d83>

Table 3.41. DeKalb County Urban/Structural Fire Vulnerability 2002-2012

| Factor Considered | Vulnerability Measure | Vulnerability Rating |
|--|--------------------------------------|----------------------|
| Building Exposure (\$) | \$1,090,102,000 | 1/5 |
| Housing Density (# per sq. mile) | 10.21 | 1/5 |
| Social Vulnerability Index Rating | Low | 1/5 |
| Likelihood of Occurrence (# / 11 years) | 61 | 2/5 |
| Total Annualized Property Loss | \$432,096 | 1/5 |
| # of Deaths Injuries | 3 | 5/5 |
| | Overall Vulnerability Rating: | 7 (Low) |

Source: 2018 Missouri State Hazard Mitigation Plan

Wildfires occur throughout wooded and open vegetation areas of Missouri. They can occur any time of the year, but mostly occur during long, dry hot spells. Any small fire, if not quickly detected and suppressed, can get out of control. Most wildfires are caused by human carelessness or negligence. However, some are precipitated by lightning strikes and in rare instances, spontaneous combustion. Structures and people in WUI areas in the county and cities are more vulnerable to the impact of wildfires due to the level of fuel mixed with structures.

Potential Losses to Existing Development

As Seen in **Table 3.40**, DeKalb County has experienced an average of 790 (8,685.51 acres burned / 11 years) acres of wildfire destruction per year over the last eleven years. As indicated in **Figure 3.39**, county has seen a larger amount of acreage burned compared to surrounding counties in Northwest Missouri, even though the county has a similar risk of seeing wildfires occur each year in comparison to its surrounding counties.

Impact of Previous and Future Development

Structural fires are impacted solely by human development. While the climate may change, the only impact this can have on the propensity for urban/structural fires will be how human behavior is impacted. An example of this would be if there is an increased strain on the electrical grid which leads to a greater chance for electrical fires, or if individuals seeking shelter from the cold are more likely to start indoor fires. The main cause for concern and risk assessment should be focused on older, larger structures, as they may be more likely to catch fire and impact surrounding structures of a similar nature, and areas with a higher housing density, such as Maysville.

Hazard Summary by Jurisdiction

Table 3.41 above summarizes the structure exposure for DeKalb County and its jurisdictions for wildfires. Communities with more WUI areas will be at greater risk of wildland fires. The exposure amount indicates the dollar amount of assets at risk and the variability of vulnerability from place to place.

Problem Statement

Wildfire occurrence is frequent within DeKalb County. These events can destroy, damage, and threaten structures in hazard prone areas. Populations and structures in WUI areas of the county have an increased risk to wildfires due to the level of fuel mixed with structures. Cities that have adopted landscape ordinances can include fire safe landscape design requirements in these areas. The school districts that have facilities located in WUI areas have a slightly elevated risk of wildfire due to the proximate amount of fuel present.

The county and its communities can promote fire resistant construction materials and landscape design techniques to mitigate the risk to wildfire in future development. Information about these materials and techniques are included in the MDC publication, "Living with Wildfire". Including this information in education and awareness programs for the public may potentially mitigate wildfire damage in the county.

4 MITIGATION STRATEGY

| | | |
|-----|--|-----|
| 4 | MITIGATION STRATEGY | 4.1 |
| 4.1 | Goals..... | 4.1 |
| 4.2 | Identification and Analysis of Mitigation Actions..... | 4.2 |
| 4.3 | Implementation of Mitigation Actions | 4.5 |

44 CFR Requirement §201.6(c)(3): The plan shall include a mitigation strategy that provides the jurisdiction’s blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources, and its ability to expand on and improve these existing tools.

This section presents the mitigation strategy updated by the Mitigation Planning Committee (MPC) based on the [updated] risk assessment. The mitigation strategy was developed through a collaborative group process. The process included review of [updated] general goal statements to guide the jurisdictions in lessening disaster impacts as well as specific mitigation actions to directly reduce vulnerability to hazards and losses. The following definitions are taken from FEMA’s *Local Hazard Mitigation Review Guide (October 1, 2012)*.

- **Mitigation Goals** are general guidelines that explain what you want to achieve. Goals are long-term policy statements and global visions that support the mitigation strategy. The goals address the risk of hazards identified in the plan.
- **Mitigation Actions** are specific actions, projects, activities, or processes taken to reduce or eliminate long-term risk to people and property from hazards and their impacts. Implementing mitigation actions helps achieve the plan’s mission and goals.

4.1 Goals

44 CFR Requirement §201.6(c)(3)(i): [The hazard mitigation strategy shall include a] description of mitigation goals to reduce or avoid long-term vulnerabilities to the identified hazards.

This planning effort is an update to DeKalb County’s existing hazard mitigation plan approved by FEMA on October 4, 2018. Therefore, the goals from the 2018 DeKalb County Hazard Mitigation Plan were reviewed to see if they were still valid, feasible, practical, and applicable to the defined hazard impacts. The MPC conducted a discussion session during their second meeting to review and update the plan goals. To ensure that the goals developed for this update were comprehensive and supported State goals, the 2018 State Hazard Mitigation Plan goals were reviewed. The MPC also reviewed the goals from current surrounding county plans. The 2023 plan’s goals and objectives are:

Goal 1: Protect the lives, property and livelihoods of all citizens.

1. Objective: Provide sufficient warning of impending disasters.
2. Objective: Increase knowledge of natural hazards among citizens.
3. Objective: Protect residential and commercial structures in the present and future.

Goal 2: Reduce the impact of disasters.

1. Objective: Manage growth in designated areas through sustainable policies, principles and practices.

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

1. Objective: Increase disaster mitigation management capability in local governments.
2. Objective: Strengthen critical infrastructure.

4.2 Identification and Analysis of Mitigation Actions

44 CFR Requirement §201.6(c)(3)(ii): The mitigation strategy shall include a section that identifies and analyzes a comprehensive range of specific mitigation actions and projects being considered to reduce the effects of each hazard, with particular emphasis on new and existing buildings and infrastructure.

Some specific sources for mitigation action ideas include the following:

- FEMA's Mitigation Action Ideas Publication, <https://www.fema.gov/media-library/assets/documents/30627>
- FEMA's Climate Resilient Activities for Hazard Mitigation Assistance, <https://www.fema.gov/media-library/assets/documents/110202>
- EPA's Hazard Mitigation for Natural Disasters Publication, <https://www.epa.gov/waterutilityresponse/hazard-mitigation-natural-disasters>
- EPAs Planning for an Emergency Drinking Water Supply Publication, <https://www.epa.gov/waterutilityresponse/water-utility-planning-emergency-drinking-water-supply>

During the second planning meeting, MPC members reviewed and discussed changes in risk since adoption of the previously approved plan. At the third MPC meeting, mitigation strategies were discussed and FEMA's *Mitigation Ideas Handbook: A Resource for Reducing Risk to Natural Hazards (January 2013)* was distributed and reviewed by those in attendance. Discussion followed regarding completed actions, on-going actions, and actions upon which progress had not been made. Those in attendance were instructed to provide descriptive information regarding the "Action Status" using the following status choices:

- Completed, with a description of the process (if provided)
- Continue, with an update of the progress or a reason for the lack of progress (if provided)
- Delete, with a description for the reason for deletion (if provided)

Former actions that were completed since the last update were deleted since the jurisdiction has that capability. New actions were created that reflected the changes in development and priorities, and actions for acquiring additional outdoor warning sirens for areas with recent growth that were part of the last update were continued since DeKalb County is still in the process of acquiring those sirens. Some jurisdictions continued actions with modifications to reflect changing needs. The MPC reviewed:

- A list of actions proposed in the previous mitigation plan, the current State Plan, and approved plans in surrounding counties,
- Key issues from the risk assessments, including the Problem Statements concluding each

hazard profile and vulnerability analysis, and

- Public input during meetings, responses to Data Collection Questionnaires, and other efforts to involve the public in the plan development process.

Table 4.1 provides a summary of the 2018 action statuses for each jurisdiction.

Table 4.1. Action Status Summary

| Jurisdiction | Completed Actions | Continuing Actions (ongoing or modify) | Deleted Actions |
|---------------------------|----------------------------------|--|---------------------------------|
| DeKalb County | 1.2.n, 1.2.q Total: 2 | 1.1.2, 1.2.2, 1.2.a, 1.2.c, 1.2.d, 1.2.e, 1.2.g, 1.2.h, 1.2.1, 1.2.m, 1.2.n, 1.2.o, 1.2.q, 1.2.r, 1.2.s, 1.2.t, 1.2.23, 1.2.v, 1.3.a, 1.3.e, 2.1.a, 2.1.b, 2.1.c, 3.1.a, 3.1.b, 3.1.c, 3.1.d, 3.2.j Total:28 | 1.2.f Total:1 |

| | Total Completed Actions: 10 | Total Continuing Actions: 50 | Total Deleted Actions: 10 |

Table 4.2 provides a summary of the completed and deleted actions from the previous plan.

Table 4.2. Summary of Completed and Deleted Actions from the Previous Plan

| Completed Actions | Completion Details (date, amount, funding source) |
|---|---|
| 1.2.n- DeKalb County- Broadcast fire hazard level and open burning information on weather radio and local media. Work in conjunction with local fire districts to provide information. | County is in year three of five-year contract with RAVE notification system at a cost of \$3,150 per year. |
| 1.n.q- DeKalb County- Designate certain air-conditioned facilities, such as the senior center, as heat emergency shelters. | The LEOP designated the courthouse, senior center, and Methodist Church and notifications sent through RAVE. |
| 1.4.b- Clarksdale- Require the anchoring of manufactured homes and exterior attachments such as carports and decks. | Passed ordinance 44 on 12-17-2020 |
| 1.1.3- Maysville- Place outdoor warning sirens in area not covered by the community's other siren. | DeKalb County is in the process of erecting another siren in Maysville. |
| 1.1.4- Osborn- Acquire outdoor warning siren. | The action was completed 2022. The City turned this action over to Dekalb County Hazard Management. |
| 1.1.1-Stewartsville- Replace outdated warning sirens to have backup power and be automatically updated. | Completed. |
| 2.1.4-Stewartsville- Adoption and enforce floodplain management requirements, including regulating new construction in Special Flood Hazard Areas (SFHAs). | Completed. |
| 1.1.b- Stewartville School District- Use electronic media and radios to communicate alerts and warnings. Current system uses phone messages; upgrade system to include cell phones and utilize texting technology. Purchase radios for busses. | Completed. |
| 2.1.5- Union Star- Adoption and enforce floodplain management requirements, including regulating new construction in Special Flood Hazard Areas (SFHAs). | Updated floodplain ordinance passed 11-9-2021 after review by SEMA, which revealed that all floodplain areas are in the community park the City owns. No costs were incurred. |
| 1.1.b- Union Star School District- Use electronic media and radios to communicate alerts and warnings. Current system uses phone messages; upgrade system to include cell phones and utilize texting technology. Purchase radios for busses. | Completed. |
| Deleted Actions | Reason for Deletion |

| | |
|--|--|
| 1.2.f- DeKalb County- Participate in SEMA public education campaign to inform dam owners and citizens living near dams about the need to properly maintain and upgrade these structures. | |
| 2.1.3- Clarksdale- Require the anchoring of manufactured homes and exterior attachments such as carports and decks. | Action completed. |
| 1.4.b- Clarksdale- Adoption and enforce floodplain management requirements, including regulating new construction in Special Flood Hazard Areas (SFHAs). | We have a floodplain manager. We do not have a lot of new construction on the floodplain. |
| 1.1.3- Maysville- Place outdoor warning sirens in area not covered by the community's other siren. | County assuming responsibility of city siren, replacing it with 360-degree rotational siren to cover whole city, per deputy clerk. |
| 1.1.1-Stewartsville- Replace outdated warning sirens to have backup power and be automatically activated. | |
| 2.1.4- Stewartsville- Adopt and enforce floodplain management requirements, including regulating new construction in Special Flood Hazard Areas (SFHAs). | |
| 1.1.b- Stewartsville School District- Use electronic media and radios to communicate alerts and warnings. Current system uses phone messages; upgrade system to include cell phones and utilize texting technology. Purchase radios for busses. | Action completed. Digium Phones and a Switchvox from United Fiber purchased for \$13,423.91 in July of 2019 for a phone and intercom system. Pay \$1,000 annually for the School Messenger program from IISC Education for text and voice notifications for staff and community in August 2019 |
| 1.1.j- Stewartsville School District- Include safety strategies for winter driving in driver safety training. | No progress. |
| 2.1.5- Union Star- Adoption and enforce floodplain management requirements, including regulating new construction in Special Flood Hazard Areas (SFHAs). | Action completed. |
| 1.1.b- Union Star School District- Use electronic media and radios to communicate alerts and warnings. Current system uses phone messages; upgrade system to include cell phones and utilize texting technology. Purchase radios for busses. | Action completed. |

4.3 Implementation of Mitigation Actions

44 CFR Requirement §201.6(c)(3)(ii): The mitigation strategy shall include an action strategy describing how the actions identified in paragraph (c)(2)(ii) will be prioritized, implemented, and administered by the local jurisdiction. Prioritization shall include a special emphasis on the extent to which benefits are maximized according to a cost benefits review of the proposed projects and their associated costs.

Jurisdictional MPC members were encouraged to meet with others in their community to finalize the actions to be submitted for the updated mitigation strategy. Throughout the MPC consideration and discussion, emphasis was placed on the importance of a benefit-cost analysis in determining project priority. The Disaster Mitigation Act requires benefit-cost review as the primary method by which mitigation projects should be prioritized. The MPC decided to pursue implementation according to when and where damage occurs, available funding, political will, jurisdictional priority, and priorities identified in the 2018 Missouri State Hazard Mitigation Plan. The benefit/cost review at the planning stage primarily consisted of a qualitative analysis and was not the detailed process required grant funding application. For each action, the plan sets forth a narrative describing the types of benefits that could be realized from action implementation. The cost was estimated as closely as possible, with further refinement to be supplied as project development occurs.

The jurisdictions independently prioritized their actions. The methodology from the 2018 plan was used, in which jurisdictions self-determined which actions were high, medium and low priorities. Consideration included the action's potential to save lives and protect property, cost and local capacity to implement/pursue. STAPLEE methodology was not used but available to jurisdictions if they wanted to use it. Actions followed the SMART criteria of being Specific, Measurable, Action oriented, Relevant and Time-bound. The goals and actions were consistent with the hazards identified in the plan and reflected the local priorities and vulnerability to hazards. The actions for the 2023 plan are listed below, followed by a summary table (Table 4.3) that lists the actions in the categories of prevention, structure and infrastructure projects, emergency services and education/outreach.

Goal 1: Protect the lives, property and livelihoods of all citizens.

ACTION 1.1.1:

| Action Worksheet | |
|--|--|
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of warning |
| Hazard(s) Addressed: | Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 1.1.1 |
| Name of Action or Project: | Outdoor warning siren |
| Action or Project Description: | Place outdoor warning sirens in populated areas that do not have them. |
| Applicable Goal Statement: | Protect the lives, property and livelihood of all citizens |
| Estimated Cost: | Unsure |
| Benefits: | Warning of impending disaster |
| Plan for Implementation | |
| Responsible Organization/Department: | Emergency Management Director |
| Action/Project Priority: | High |
| Timeline for Completion: | Fall 2022 |
| Potential Fund Sources: | Internal, ARPA |
| Local Planning Mechanisms to be Used in Implementation, if any: | Local Emergency Operating Plan |
| Progress Report | |
| Action Status | Continuing, in progress. |
| Report of Progress | County secured funding and purchased new warning siren system; awaiting siren installation |

Goal 1: Protect the lives, property and livelihoods of all citizens.

ACTION 1.1.2:

| Action Worksheet | |
|-----------------------------------|-----------------------|
| Name of Jurisdiction: | Village of Weatherby |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of warning |
| Hazard(s) Addressed: | Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 1.1.2 |
| Name of Action or Project: | Outdoor warning siren |

| | |
|--|--|
| Action or Project Description: | Place outdoor warning sirens in populated areas that do not have them. |
| Applicable Goal Statement: | Protect the lives, property and livelihood of all citizens |
| Estimated Cost: | Unsure |
| Benefits: | Warning of impending disaster |
| Plan for Implementation | |
| Responsible Organization/Department: | Emergency Management Director |
| Action/Project Priority: | High |
| Timeline for Completion: | Fall 2022 |
| Potential Fund Sources: | County |
| Local Planning Mechanisms to be Used in Implementation, if any: | Local Emergency Operating Plan |
| Progress Report | |
| Action Status | Complete, continue |
| Report of Progress | County secured funding and purchased new warning siren system; awaiting siren installation |

ACTION 1.1.3:

| | |
|--|--|
| Action Worksheet | |
| Name of Jurisdiction: | Clarksdale |
| Risk / Vulnerability | |
| Problem being Mitigated: | Provide shelter for vulnerable populations (many do not have basements or a safe place in severe weather). |
| Hazard(s) Addressed: | Tornado, Severe Storm, Earthquake |
| Action or Project | |
| Action/Project Number: | 1.1.3 |
| Name of Action or Project: | Safe room |
| Action or Project Description: | Build a safe room with the capacity to handle the city's population and more. |
| Applicable Goal Statement: | Protect the lives, property and livelihood of all citizens |
| Estimated Cost: | Unsure |
| Benefits: | Protect lives by providing a safe place for citizens and public to seek shelter in a tornado or storm. |
| Plan for Implementation | |
| Responsible Organization/Department: | City/Mayor |
| Action/Project Priority: | Medium |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal, fundraisers, grants, donations |
| Local Planning Mechanisms to be Used in Implementation, if any: | City Council |
| Progress Report | |

| | |

| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | City Ordinance |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | No progress |

Goal 2: Reduce the impact of disasters.

Action 2.1.1:

| | |
|--|---|
| Action Worksheet | |
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Flooding |
| Hazard(s) Addressed: | Flood, Thunderstorm |
| Action or Project | |
| Action/Project Number: | 2.1.1 |
| Name of Action or Project: | Watershed and storm water practices |
| Action or Project Description: | Develop environmentally sound watershed and storm water practices to decrease flash flooding. |
| Applicable Goal Statement: | Reduce the impact of disasters |
| Estimated Cost: | Unsure |
| Benefits: | Decrease in flash flooding |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | Medium |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | Floodplain Ordinance |
| Progress Report | |
| Action Status | Continuing |

| | |
|--------------------|--|
| Report of Progress | |
|--------------------|--|

Goal 2: Reduce the impact of disasters.

Action 2.1.2:

| Action Worksheet | |
|--|---|
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Loss of property |
| Hazard(s) Addressed: | Dam Failure, Drought, Earthquake, Flood, Severe Winter Weather, Wildfire |
| Action or Project | |
| Action/Project Number: | 2.1.2 |
| Name of Action or Project: | Address development in hazard-prone areas |
| Action or Project Description: | Craft new plans and update comprehensive land use plans to address development in hazard-prone areas and identify strategies for decreasing vulnerability to hazards. |
| Applicable Goal Statement: | Reduce the impact of disasters |
| Estimated Cost: | Unsure |
| Benefits: | Decrease in loss of property |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | Low |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | Floodplain ordinance |
| Progress Report | |
| Action Status | Continuing |
| Report of Progress | |

Goal 2: Reduce the impact of disasters.

Action 2.1.3:

| Action Worksheet | |
|---------------------------------|----------------------------------|
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Flooding |
| Hazard(s) Addressed: | Dam failure, Flood, Thunderstorm |
| Action or Project | |
| Action/Project Number: | 2.1.3 |

| | |
|--|---|
| Name of Action or Project: | Flood hazard maps |
| Action or Project Description: | Develop an accurate countywide series of maps detailing the flood plain, flash flood danger zones and other hazard areas. |
| Applicable Goal Statement: | Reduce the impact of disasters |
| Estimated Cost: | Unsure |
| Benefits: | Decrease in flooding |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | Very high |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | Floodplain ordinance |
| Progress Report | |
| Action Status | Continuing |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.1:

| | |
|--|--|
| Action Worksheet | |
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of practicing hazard mitigation best practices |
| Hazard(s) Addressed: | Earthquake |
| Action or Project | |
| Action/Project Number: | 3.1.1 |
| Name of Action or Project: | Earthquake mitigation |
| Action or Project Description: | Work with state and local governments to raise awareness of earthquake mitigation activities in homes, schools and businesses. |
| Applicable Goal Statement: | Increase disaster mitigation management capability in local governments. |
| Estimated Cost: | |
| Benefits: | Prepared public |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | High |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | Local Emergency Operating Plan |

| Progress Report | |
|---------------------------|------------|
| Action Status | Continuing |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.2:

| Action Worksheet | |
|--|--|
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of resources |
| Hazard(s) Addressed: | Dam Failure, Drought, Earthquake, Flood, Heat Wave, Severe Winter Weather, Thunderstorm, Tornado, Wildfire |
| Action or Project | |
| Action/Project Number: | 3.1.2 |
| Name of Action or Project: | Mutual aid agreements |
| Action or Project Description: | Execute and maintain mutual aid agreements with all relevant agencies. |
| Applicable Goal Statement: | Increase disaster mitigation management capability in local governments |
| Estimated Cost: | None |
| Benefits: | Additional resources available if needed |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners and Fire Districts |
| Action/Project Priority: | Very high |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | Local Emergency Operating Plan |
| Progress Report | |
| Action Status | Continuing |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.3:

| Action Worksheet | |
|---------------------------------|------------------------------------|
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of emergency management staff |

| | |
|--|--|
| Hazard(s) Addressed: | Dam Failure, Drought, Earthquake, Flood, Heat Wave, Severe Winter Weather, Thunderstorm, Tornado, Wildfire |
| Action or Project | |
| Action/Project Number: | 3.1.3 |
| Name of Action or Project: | Emergency Management Director position |
| Action or Project Description: | Expand the county emergency management director position to full time. |
| Applicable Goal Statement: | Increase disaster mitigation management capability in local governments |
| Estimated Cost: | Unsure |
| Benefits: | Staffed position |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | Medium |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | None |
| Progress Report | |
| Action Status | Continuing |
| Report of Progress | No progress |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.4:

| | |
|---|--|
| Action Worksheet | |
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of debris management system |
| Hazard(s) Addressed: | Flood, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.1.4 |
| Name of Action or Project: | Debris Management |
| Action or Project Description: | Have a debris management plan for the county to take care of debris after storms |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | Quick removal of debris after a storm |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners |
| Action/Project Priority: | High |

| | |
|--|-------------------------|
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | None |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.5:

| | |
|--|--|
| Action Worksheet | |
| Name of Jurisdiction: | Maysville |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of debris management system |
| Hazard(s) Addressed: | Flood, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.1.5 |
| Name of Action or Project: | Debris management |
| Action or Project Description: | Have a debris management plan for the county and cities to take care of debris after storms. |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster |
| Estimated Cost: | Unsure |
| Benefits: | Quick removal of debris after a storm |
| Plan for Implementation | |
| Responsible Organization/Department: | Mayor |
| Action/Project Priority: | Medium |
| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Internal, grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Code of Ordinances |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | Debris collected at the water plant |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.6:

| Action Worksheet | |
|--|--|
| Name of Jurisdiction: | Osborn |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of debris management system |
| Hazard(s) Addressed: | Flood, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.1.6 |
| Name of Action or Project: | Debris management |
| Action or Project Description: | Have a debris management plan for the county and cities to take care of debris after storms. |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster |
| Estimated Cost: | Unsure |
| Benefits: | Quick removal of debris after a storm |
| Plan for Implementation | |
| Responsible Organization/Department: | Mayor |
| Action/Project Priority: | High |
| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Local, grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Code of Ordinances |
| Progress Report | |
| Action Status | Continuing, no progress |
| Report of Progress | The Board hasn't found the best way to proceed with this action. |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.7:

| Action Worksheet | |
|---------------------------------------|--|
| Name of Jurisdiction: | Osborn School District |
| Risk / Vulnerability | |
| Problem being Mitigated: | Understanding hazard mitigation best practices |
| Hazard(s) Addressed: | Earthquake |
| Action or Project | |
| Action/Project Number: | 3.1.7 |
| Name of Action or Project: | Earthquake mitigation |
| Action or Project Description: | Work with state and local governments to raise awareness of earthquake mitigation activities in homes, schools and businesses. |

| | |
|--|---|
| Applicable Goal Statement: | Increase disaster mitigation management capability in local governments |
| Estimated Cost: | Unsure |
| Benefits: | Increase warning and reaction time for severe weather |
| Plan for Implementation | |
| Responsible Organization/Department: | Superintendent |
| Action/Project Priority: | Medium |
| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | School emergency plan |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | Working to incorporate information about home safety as well as school safety |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.8:

| | |
|--|--|
| Action Worksheet | |
| Name of Jurisdiction: | Stewartsville School District |
| Risk / Vulnerability | |
| Problem being Mitigated: | Understanding hazard mitigation best practices |
| Hazard(s) Addressed: | Earthquake |
| Action or Project | |
| Action/Project Number: | 3.1.8 |
| Name of Action or Project: | Earthquake mitigation |
| Action or Project Description: | Work with state and local governments to raise awareness of earthquake mitigation activities in homes, schools and businesses. |
| Applicable Goal Statement: | Increase disaster mitigation management capability in local governments |
| Estimated Cost: | Unsure |
| Benefits: | Increase warning and reaction time for severe weather |
| Plan for Implementation | |
| Responsible Organization/Department: | Superintendent |
| Action/Project Priority: | High |
| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Internal |
| Local Planning Mechanisms to be Used in Implementation, if any: | School emergency plan |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | Working to understand what best practices are used for this goal |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.9:

| Action Worksheet | |
|--|---|
| Name of Jurisdiction: | Village of Weatherby |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of debris management system |
| Hazard(s) Addressed: | Flood, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.1.9 |
| Name of Action or Project: | Debris management |
| Action or Project Description: | Have a debris management plan for the county and cities to take care of debris after storms |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | Quick removal of debris after a storm |
| Plan for Implementation | |
| Responsible Organization/Department: | Mayor |
| Action/Project Priority: | Medium |
| Timeline for Completion: | Ongoing |
| Potential Fund Sources: | Internal, grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Code of Ordinances |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | No progress as no debris to worry about |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.1.10:

| Action Worksheet | |
|-----------------------------------|--|
| Name of Jurisdiction: | Clarksdale |
| Risk / Vulnerability | |
| Problem being Mitigated: | Lack of communication between city government, emergency, and clean up personnel in disaster |
| Hazard(s) Addressed: | Earthquake, Flood, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.1.10 |
| Name of Action or Project: | Radios |

| | |
|--|--|
| Action or Project Description: | Acquire radios for location communication with government officials, emergency and disaster management personnel |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | Source of communication between personnel working to serve people during a crisis. |
| Plan for Implementation | |
| Responsible Organization/Department: | City |
| Action/Project Priority: | Medium |
| Timeline for Completion: | 3 years |
| Potential Fund Sources: | Internal, grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | City Council |
| Progress Report | |
| Action Status | New action |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.2.1:

| | |
|---|---|
| Action Worksheet | |
| Name of Jurisdiction: | DeKalb County |
| Risk / Vulnerability | |
| Problem being Mitigated: | Dispatch centers in poor locations |
| Hazard(s) Addressed: | Earthquake, Flood, Heat Wave, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.2.1 |
| Name of Action or Project: | Evaluate dispatch center locations |
| Action or Project Description: | Evaluate the location of 911 dispatch center and consider other possible locations. |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | Protected infrastructure |
| Plan for Implementation | |
| Responsible Organization/Department: | County Commissioners and Sheriff |
| Action/Project Priority: | High |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Internal |

| | |
|--|--------------------------------|
| Local Planning Mechanisms to be Used in Implementation, if any: | Local Emergency Operating Plan |
| Progress Report | |
| Action Status | Continuing, in progress |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.2.2:

| | |
|--|---|
| Action Worksheet | |
| Name of Jurisdiction: | City of Maysville |
| Risk / Vulnerability | |
| Problem being Mitigated: | Water and wastewater service interruption due to natural disaster |
| Hazard(s) Addressed: | Earthquake, Flood, Heat Wave, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.2.2 |
| Name of Action or Project: | Generator |
| Action or Project Description: | Purchase a portable generator capable of powering water distribution and wastewater removal if power is out |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | Source of power during natural disaster to avoid interruption of service |
| Plan for Implementation | |
| Responsible Organization/Department: | Board of Aldermen/Mayor |
| Action/Project Priority: | High |
| Timeline for Completion: | 2 years |
| Potential Fund Sources: | Grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Unknown |
| Progress Report | |
| Action Status | New |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.2.3:

| | |
|------------------------------|--------------------|
| Action Worksheet | |
| Name of Jurisdiction: | City of Union Star |

| Risk / Vulnerability | |
|--|---|
| Problem being Mitigated: | Poor drainage |
| Hazard(s) Addressed: | Flood |
| Action or Project | |
| Action/Project Number: | 3.2.3 |
| Name of Action or Project: | Street improvements |
| Action or Project Description: | Perform street improvements to further improve drainage throughout the community. |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | \$500,000 |
| Benefits: | Mitigate flooding throughout the community |
| Plan for Implementation | |
| Responsible Organization/Department: | City, local RPC |
| Action/Project Priority: | High |
| Timeline for Completion: | 3 years |
| Potential Fund Sources: | Grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Unknown |
| Progress Report | |
| Action Status | New |
| Report of Progress | |

Goal 3: Ensure continued operation of government and emergency functions in a disaster.

Action 3.2.4:

| Action Worksheet | |
|---------------------------------------|---|
| Name of Jurisdiction: | Village of Weatherby |
| Risk / Vulnerability | |
| Problem being Mitigated: | Loss of electricity |
| Hazard(s) Addressed: | Earthquake, Flood, Heat Wave, Severe Winter Weather, Thunderstorm, Tornado |
| Action or Project | |
| Action/Project Number: | 3.2.4 |
| Name of Action or Project: | Generator |
| Action or Project Description: | Purchase a portable generator capable for the community building |
| Applicable Goal Statement: | Ensure continued operation of government and emergency functions in a disaster. |
| Estimated Cost: | Unsure |
| Benefits: | A place with power for residents to go during natural disaster |
| Plan for Implementation | |
| Responsible | Board of Aldermen/Mayor |

| | |
|--|---------|
| Organization/Department: | |
| Action/Project Priority: | High |
| Timeline for Completion: | 5 years |
| Potential Fund Sources: | Grants |
| Local Planning Mechanisms to be Used in Implementation, if any: | Unknown |
| Progress Report | |
| Action Status | New |
| Report of Progress | |

5 PLAN MAINTENANCE PROCESS

| | |
|---|-----|
| 5 PLAN MAINTENANCE PROCESS | 5.1 |
| 5.1 Monitoring, Evaluating, and Updating the Plan..... | 5.1 |
| 5.1.1 Responsibility for Plan Maintenance | 5.1 |
| 5.1.2 Plan Maintenance Schedule | 5.2 |
| 5.1.3 Plan Maintenance Process..... | 5.2 |
| 5.2 Incorporation into Existing Planning Mechanisms | 5.3 |
| 5.3 Continued Public Involvement | 5.4 |

This chapter provides an overview of the overall strategy for plan maintenance and outlines the method and schedule for monitoring, updating and evaluating the plan. The chapter also discusses incorporating the plan into existing planning mechanisms and how to address continued public involvement.

5.1 Monitoring, Evaluating, and Updating the Plan

44 CFR Requirement 201.6(c)(4): The plan maintenance process shall include a section describing the method and schedule of monitoring, evaluating, and updating the mitigation plan within a five-year cycle.

5.1.1 Responsibility for Plan Maintenance

The Mitigation Planning Committee (MPC) is not a standing committee. Responsibility for maintenance will reside with the individual jurisdictions for monitoring, evaluation and maintenance. Maintenance activities for the participating jurisdictions, including school and special districts, may involve:

- Meet annually, and after a disaster event, to monitor and evaluate the implementation of the plan;
- Act as a forum for hazard mitigation issues;
- Disseminate hazard mitigation ideas and activities to all participants;
- Pursue the implementation of high priority, low- or no-cost recommended actions;
- Maintain vigilant monitoring of multi-objective, cost-share, and other funding opportunities to help the community implement the plan's recommended actions for which no current funding exists;
- Monitor and assist in implementation and update of this plan;
- Keep the concept of mitigation in the forefront of community decision making by identifying plan recommendations when other community goals, plans, and activities overlap, influence, or directly affect increased community vulnerability to disasters;
- Report on plan progress and recommended changes to the County Commissioners and governing bodies of participating jurisdictions; and
- Inform and solicit input from the public.

It's the MPC representative's primary duty to see the plan successfully carried out and to report to the community's governing boards and the public on the status of plan implementation and mitigation opportunities. Other duties include reviewing and promoting mitigation proposals, hearing stakeholder concerns about hazard mitigation, passing concerns on to appropriate entities, and posting relevant information in areas accessible to the public.

5.1.2 Plan Maintenance Schedule

The DeKalb County Emergency Management Director (EMD) will be responsible for initiating the plan review at the LEPC meeting every year. For the other jurisdictions, their MPC representative will be responsible for initiating reviews.

In coordination with all participating jurisdictions, a five-year written update of the plan will be submitted to the Missouri State Emergency Management Agency (SEMA) and FEMA Region VII Per Requirement 201.6(c)(4)(i) of the Disaster Mitigation Act of 2000, unless disaster or other circumstances require a change to this schedule.

5.1.3 Plan Maintenance Process

Progress on the proposed actions can be monitored by evaluating changes in vulnerabilities identified in the plan. The MPC (or other designated responsible entity) during the annual meeting should review changes in vulnerability identified as follows:

- Decreased vulnerability as a result of implementing recommended actions,
- Increased vulnerability as a result of failed or ineffective mitigation actions,
- Increased vulnerability due to hazard events, and/or
- Increased vulnerability as a result of new development (and/or annexation).

Future 5-year updates to this plan will include the following activities:

- Consideration of changes in vulnerability due to action implementation,
- Documentation of success stories where mitigation efforts have proven effective,
- Documentation of unsuccessful mitigation actions and why the actions were not effective,
- Documentation of previously overlooked hazard events that may have occurred since the previous plan approval,
- Incorporation of new data or studies with information on hazard risks,
- Incorporation of new capabilities or changes in capabilities,
- Incorporation of growth data and changes to inventories, and
- Incorporation of ideas for new actions and changes in action prioritization.

In order to best evaluate any changes in vulnerability as a result of plan implementation, the participating jurisdictions will adopt the following process:

- Each proposed action in the plan identified an individual, office, or agency responsible for action implementation. This entity will track and report on an annual basis to the jurisdictional MPC (or designated responsible entity) member on action status. The entity will provide input on whether the action as implemented meets the defined objectives and is likely to be successful in reducing risk.
- If the action does not meet identified objectives, the jurisdictional MPC (or designated responsible entity) member will determine necessary remedial action, making any required modifications to the plan.

Changes will be made to the plan to remedy actions that have failed or are not considered feasible. Feasibility will be determined after a review of action consistency with established criteria, time frame, community priorities, and/or funding resources. Actions that were not ranked high but were identified as potential mitigation activities will be reviewed as well during the monitoring of this plan. Updating of the plan will be accomplished by written changes and submissions, as the (MPC or designated responsible entity) deems appropriate and necessary. Changes will be approved by the DeKalb County Commissioners and the governing boards of the other participating jurisdictions.

5.2 Incorporation into Existing Planning Mechanisms

44 CFR Requirement §201.6(c)(4)(ii): [The plan shall include a] process by which local governments incorporate the requirements of the mitigation plan into other planning mechanisms such as comprehensive or capital improvement plans, when appropriate.

Where possible, plan participants, including schools, will use existing plans and/or programs to implement hazard mitigation actions. Those existing plans and programs were described in Chapter 2 of this plan. Based on the capability assessments of the participating jurisdictions, communities in DeKalb County will continue to plan and implement programs to reduce losses to life and property from hazards. This plan builds upon the momentum developed through previous and related planning efforts and mitigation programs and recommends implementing actions, where possible, through the following plans:

- Comprehensive plans of participating jurisdictions.
- Ordinances of participating jurisdictions;
- Local Emergency Operations Plans;
- Capital improvement plans and budgets;
- Other community plans within the county, such as water conservation plans, storm water management plans, and parks and recreation plans; and
- School District Emergency Plans

The MPC (or designated responsible entity) members involved in updating these existing planning mechanisms will be responsible for integrating the findings and actions of the mitigation plan, as appropriate. The MPC (or designated responsible entity) is also responsible for monitoring this integration and incorporation of the appropriate information into the five-year update of the multijurisdictional hazard mitigation plan.

Additionally, the DeKalb County Emergency Management Director (EMD) will provide the updated mitigation strategy with current status of each mitigation action to the county commission as well as all mayors, city clerks, and school district superintendents as appropriate. The EMD will request that the mitigation strategy be incorporated, where appropriate, in other planning mechanisms.

Table 5.1 below lists the planning mechanisms by jurisdiction into which the Hazard Mitigation Plan will be integrated.

Table 5.1. Planning Mechanisms Identified for Integration of Hazard Mitigation Plan

| Jurisdiction | Planning Mechanisms | Integration Process for Previous Plan | Integration Process for Current Plan |
|---------------|-------------------------------------|---------------------------------------|--------------------------------------|
| DeKalb County | Comprehensive Plan, Local Emergency | Comprehensive Plan, Local Emergency | Comprehensive Plan, Local Emergency |

| Stewartsville School District | School Emergency Plan, Capital Improvement Plan | School Emergency Plan | School Emergency Plan |
| Union Star School District | School Emergency Plan, Master Plan | School Emergency Plan | School Emergency Plan |

5.3 Continued Public Involvement

44 CFR Requirement §201.6(c)(4)(iii): [The plan maintenance process shall include a] discussion on how the community will continue public participation in the plan maintenance process.

The hazard mitigation plan update process provides an opportunity to publicize success stories resulting from the plan’s implementation and seek additional public comment. Information about the annual reviews will be posted in the local newspaper, as well as, on the DeKalb County website following each review of the mitigation plan. When the MPC reconvenes for the five-year update, it will coordinate with all stakeholders participating in the planning process. Included in this group will be those who joined the MPC after the initial effort, to update and revise the plan. Public notice will be posted and public participation will be actively solicited, at a minimum, through available website postings and press releases to local media outlets, primarily newspapers.

DEKALB COUNTY

PROJECT STATUS UPDATE | JUNE 2022

RiskMAP

Increasing Resilience Together

In December 2021 we conducted a Pre-Meeting Survey. We will be sharing those results as part of the Pre-Discovery Report. During this phase, your county will be heavily researched to “discover” existing data that can be used in your project. This includes local aerial photography, flood control structure as-builts, high water marks, etc. This is a cost-effective approach that will allow us to not only utilize our resources effectively, but to also produce the most accurate floodplain maps for your county. We will hold a Discovery Meeting on June 29, 2022 to discuss the modeling methods that we plan to use for the streams in Dekalb County. If you have any questions, please don't hesitate to reach out to us.

Project Tasks and Milestones

- Pre-Discovery Meeting
Date: 06/29/2022
- 30 day Comment Period for Discovery Meeting
Dates: TBD anticipated for July 2022
- Send out Final Report – anticipated for August 2022
- 30 day Comment Period – anticipated to end August 2022
- Field Survey Collection – TBD anticipated in Fall 2022
- Flood Study Review meetings for BLE models
Date: TBD

Planning Process

DeKalb County Commissioner Meeting – Hazard Mitigation Plan

DeKalb County Courthouse

October 5, 2021

11:00 am

1) What is the Hazard Mitigation Plan

- A. HMP flyer**
- B. Hazard Mitigation Grants flyer**
- C. 2017 DeKalb HMP**

2) Process for Updating the Plan

- A. Questionnaire**
- B. Stakeholder meetings (3-4)**
- C. Risk assessment**
- D. Mitigation Review**

3) In-Kind Match

- A. In-Kind form**
- B. Eligible in-kind**

4) Public Outreach/Participation

- A. Survey**
- B. Community Events**
- C. Ready in 3 materials**

4) Review Stakeholder/Meeting Invitation List

- A. Update list**

5) Timeline

- A. Set kick-off meeting date**

Handwritten notes on the right margin, including a circled 'A' and some illegible text.

DeKalb County Multi-Jurisdictional Hazard Mitigation Plan Update Kick-Off Meeting

On behalf of DeKalb County, you are invited to the planning meetings to update the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan (HMP). Your participation is a key element to the success of the plan update effort. Please see the information about the first meeting below:

What: DeKalb County HMP Update Kick-Off Meeting

Where: June Conley Building, 701 E. Main Street, Maysville, MO 64469

When: Tuesday, December 7, 2021

RSVP: Please **RSVP by Tuesday, November 30**

at <https://www.surveymonkey.com/r/SF65B3F> or by scanning the following QR Code

At the upcoming meeting, we will discuss the purpose and content of a hazard mitigation plan and the hazards that affect DeKalb County, such as tornadoes and floods.

DeKalb County requests your assistance in forwarding this invitation to others in your jurisdiction.

Participants in the planning committee include, but are not limited to: emergency responders, elected officials, county clerk, city clerks, county and city employees, schools, utilities, private-non-profit representatives, private industry and business, clergy, and community volunteers. People from various backgrounds are needed to participate. No previous experience with emergency management or planning is necessary.

The existing plan, approved by FEMA in October 2018, was developed in accordance with the Disaster Mitigation Act of 2000. To maintain eligibility for certain FEMA Hazard Mitigation Assistance grants, the Act requires jurisdictions to develop a plan to assess their risks to hazards and identify actions that can be taken in advance to reduce future losses. The Act requires Hazard Mitigation Plans to be updated every five years.

Please see the enclosed information sheet about the Hazard Mitigation Plan process.

Mo-Kan Regional Council is the contact for updating the plan and will be working closely with the county commissioners and emergency management director during the update. Please contact Mo-Kan at (816) 233-3144 or email hayley@mo-kan.org with any questions.

Thank you,

Hayley Howard & Trevor Tutt
Community Development Planners

DeKalb County Hazard Mitigation Plan Update

Planning Meeting #1

Tuesday, December 7, 2021 @ 11:00 am
June Conley Building
Maysville, Missouri

Meeting Agenda

- Welcome and Introductions
- What is the Hazard Mitigation Plan (HMP)? (Background & Purpose)
- Why do we need to participate? (Grant Eligibility & Programs)
- What's the process of updating the plan? (Planning Tasks)
- What are HMP participation requirements?
- Timeline
- Next Steps

Mo-Kan's Role in HMP

- Who is Mo-Kan?
 - Mo-Kan is one of 19 regional planning commissions in Missouri
 - Mo-Kan serves six counties
 - Andrew, Buchanan, Clinton, and DeKalb in Missouri
 - Atchison and Doniphan in Kansas
 - Part of a larger, statewide organization, the Missouri Association of Council of Governments (MACOG)
 - Mo-Kan facilitates the process in cooperation with the county/jurisdictions

What is a Hazard Mitigation Plan?

- Sustained action taken to reduce or eliminate long-term risk to human life and property from hazardous events
- Mitigation planning is a process for communities to:
 - Identify the hazards to which they are at risk
 - Assess the potential impact of those hazards
 - Develop goals, objectives, and actions to reduce impacts
 - Prioritize and implement mitigation actions

What are the parts of a Hazard Mitigation Plan?

- Chapter 1 – planning process
- Chapter 2 – community profiles and capabilities
- Chapter 3 – risk assessment
- Chapter 4 – mitigation strategy
- Chapter 5 – plan maintenance

(DeKalb's 2018 plan was 320 pages)

Why Do We Need to Participate?

- Disaster Mitigation Act of 2000
- Requires local governments to adopt a natural hazard mitigation plan to maintain eligibility for FEMA mitigation funds
- Plan must be updated and approved by FEMA every 5 years
- Goal is to reduce loss of life and property in the event of a natural disaster
- Create more resilient communities

Approved HMP Establishes Eligibility for FEMA Grants To Participating Jurisdictions

- Hazard Mitigation Grant Program (HMGP)- available after a federally declared disaster- not open
- Building Resilient Infrastructure and Communities (BRIC)- deadline 1-28-22
- Flood Mitigation Assistance (FMA) Program- deadline 1-28-22
 - Repetitive Loss Program
 - Severe Repetitive Loss Program

Hazard Mitigation Grant Program (HMGP)

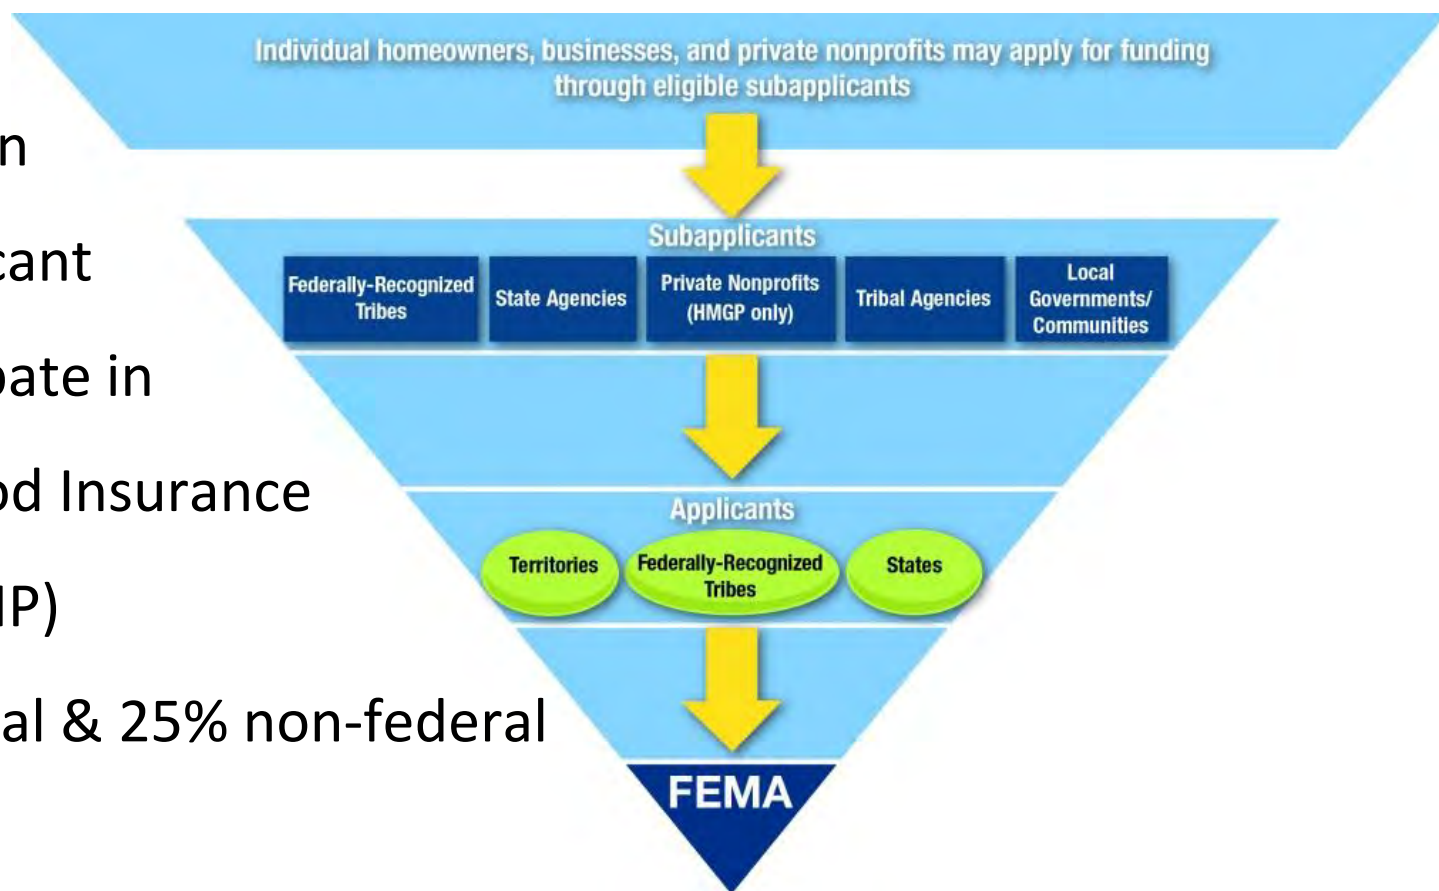

- The Hazard Mitigation Grant Program (HMGP) provides grants to States and local governments to implement long-term hazard mitigation measures after a major disaster declaration (11 disasters declared in the county in 30 years).
- Eligible applicants are state agencies, local governments, private non-profit organizations, or Indian tribal governments.
- 75% federal & 25% non-federal match
- **An approved local mitigation plan is required.**

Building Resilient Infrastructure & Communities (BRIC)

- Annual Appropriation
- Nationally competitive grant for up to \$600,000 for individual projects that focus on pre-disaster mitigation activities that involve critical services/facilities, public infrastructure, public safety or public health
- 75% federal & 25% non-federal match; or 90% & 10% if meets criteria for a small, impoverished community
 - SEMA forwards selected applications to FEMA
 - **An approved local mitigation plan is required.**

Flood Mitigation Assistance Program

- Annual Appropriation
- Sub-applicant must participate in National Flood Insurance Program (NFIP)
- 75% federal & 25% non-federal match
- An approved local mitigation plan is required.

What's the Process to Update DeKalb County's Hazard Mitigation Plan?

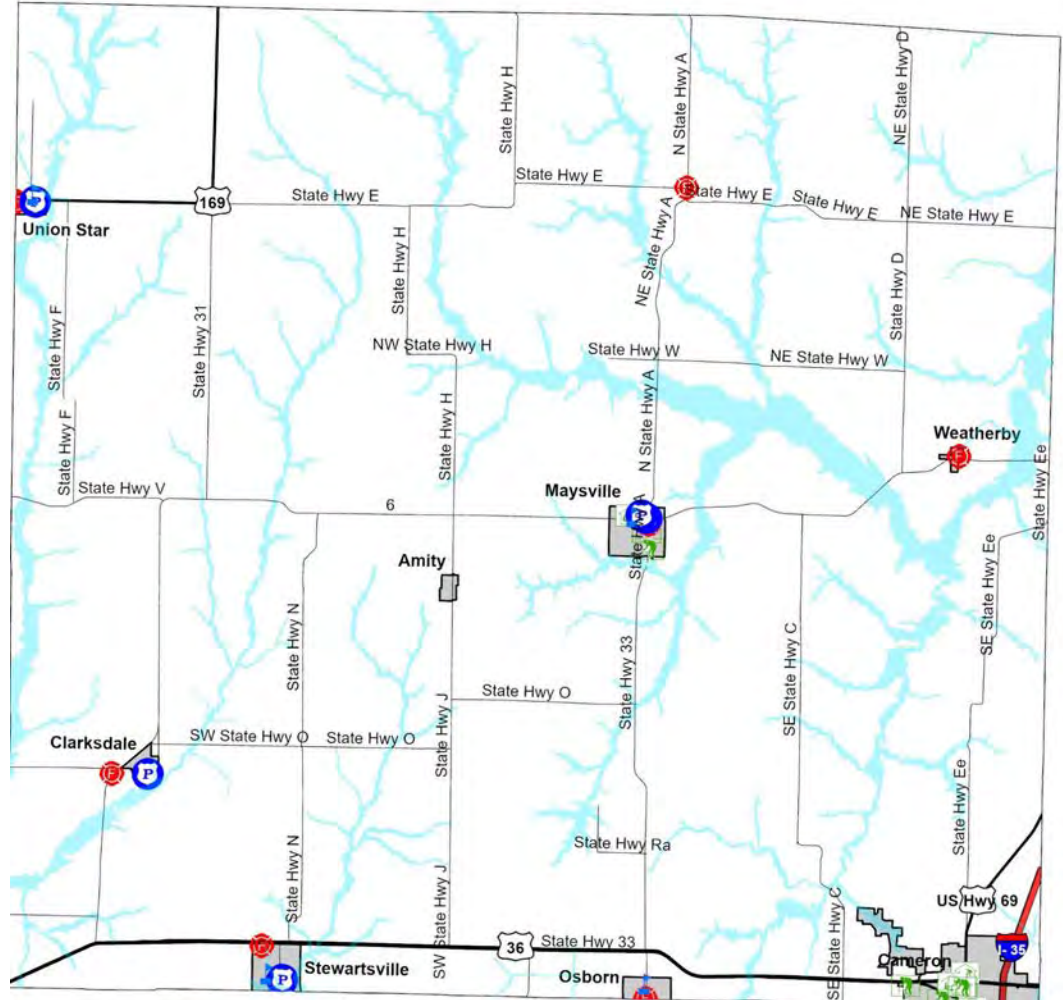

9 Tasks to Complete the Plan Update

- **Task 1: Determine the Planning Area**
- **Task 2: Build the Planning Team**
- **Task 3: Create an Outreach Strategy**
- **Task 4: Review Community Capabilities**
- Task 5: Conduct a Risk Assessment
- Task 6: Develop a Mitigation Strategy
- Task 7: Review and Adopt the Plan
- Task 8: Keep the Plan Current
- Task 9: Create a Safe and Resilient Community

Multi-Jurisdictional Plan Approach

Task 1: Determine the Planning Area

- DeKalb County
- Amity
- Clarksdale
- Maysville
- Osborn
- Stewartsville
- Union Star
- Weatherby
- Maysville, Osborn, Stewartsville & Union Star School Districts

Anyone missing?

Task 2: Build the Planning Team

Jurisdictions

- Emergency Responders
- County and City Clerks
- Elected Officials
- Public Works Directors
- Floodplain Managers
- Stormwater Managers
- School Principals & Superintendents

Stakeholders

- Business Partners
- Private-non-profits
- State & Federal Agencies
- Academia
- Healthcare Sector
- Senior Living Facilities
- Local/Regional Agencies

Who is missing?

Task 2: Build the Planning Team

| Amity | |

| Chet Owen | DeKalb Commissioners |
| Kyle Carroll | DeKalb Commissioners |
| Kyle White | DeKalb Commissioners |
| Harold Allison | DeKalb Emergency Manag. Director |
| Missy Meek | County Clerk |
| Tanya Zimmerman | Assessor |

Task 3: Creating an Outreach Strategy- Public Involvement Requirement

- During Drafting Stage
 - Public Survey – please see handout
 - Online Survey-
 - Hard Copies—City Halls/Libraries/Post Offices
 - Link on County Website/Other Websites?
- Prior to approval
 - Draft Available via County Website
 - Hard Copies - at least two public locations
- Other Ideas/Events for Public Outreach
 - LEPC, fire chiefs or levee district meetings; community events (schools?); mobile events (hazardous waste collection & Second Harvest)

Data Collection Questionnaires

Task 4: Reviewing Community Capabilities

- Please see the [questionnaire](#)
- The questionnaire asks for information that's used for reviewing community capabilities
- It's common for several people to contribute information to complete the questionnaire
- Critical facilities information is required
- All questionnaires have been mailed/emailed and we'll collect pages 1-6 today

Critical Facilities Examples

| Essential Facilities | High Potential Loss Facilities | Transportation and Lifeline |
|--|---|--|
| <ul style="list-style-type: none">•Hospitals and other medical facilities•Police stations•Fire station•Emergency Operations Centers | <ul style="list-style-type: none">•Power plants•Dams/levees•Military installations•Hazardous material sites•Schools•Shelters•Day care centers•Nursing homes•Main government buildings | <ul style="list-style-type: none">•Highways, bridges, and tunnels•Railroads and facilities•Bus facilities•Airports•Water treatment facilities•Natural gas facilities and pipelines•Oil facilities and pipelines•Communications facilities |

- Take a few minutes to review and ask questions
- Please submit **before** the next meeting (mail or e-mail)

Inventory of Critical Facilities by Jurisdiction

| Jurisdiction | Airport Facility | Bus Facility | Childcare Facility | Communications Tower | Electric Power Facility | Emergency Operations | Fire Service | Government | Housing | Shelters | Highway Bridge | Hospital/Health Care | Military | Natural Gas Facility | Nursing Homes | Police Station | Potable Water Facility | Rail | Sanitary Pump Stations | School Facilities | Stormwater Pump Stations | Tier II Chemical Facility | Wastewater Facility | TOTAL | |

What are HMP Participation Requirements for each jurisdiction?

- Attend at least one HMP meeting- preferably two
- Complete data questionnaire form and list of critical/essential facilities
- Complete updated risk assessment
- Evaluate past mitigation actions
- Develop new and update past mitigation actions **(at least one)**
- Provide comments on plan drafts as requested
- Inform the public and provide opportunities for comment on plan
- Adopt the plan (adoption resolution template)

DeKalb County Plan Update Timeline

- Planning Committee Meetings
 - Planning Meeting #1, **Today**
 - Data Collection Questionnaire & critical facilities
 - Planning Meeting #2, **February 2022 (Exact Date TBD)**
 - Risk Assessment & update mitigation goals/actions from previous plan
 - Planning Meeting # 3, **April 2022 (Exact Date TBD)**
 - Develop new goals and actions & discuss plan maintenance
 - Planning Meeting #4, **June 2022 (Exact Date TBD)**
 - Complete draft of document and post for public comment, **Sept. 2022**
 - Resolutions due, **January 1, 2023**

DeKalb County Plan Update Timeline

- DeKalb County's Current Hazard Mitigation Plan
 - Draft of the update is due to FEMA by **March 17, 2023**
 - The public must have an opportunity to comment on the draft before adopted by the county
 - All jurisdictions must adopt the HMP **prior** to submitting the draft to SEMA

In-Kind Match

- DeKalb County is responsible for \$ **8,640** in-kind match
- In-kind activities include:
 - Planning Committee
(unless elected or appointed)
 - Hosting public meetings
and talking to community groups
 - Researching or compiling data
related to the plan
 - Donation of supplies, labor
or equipment for project in plan
 - Time spent driving to HMP
activities

 **Mo-Kan**

DeKalb County Multi-Jurisdictional Hazard Mitigation Plan Update Meeting Two

January 26, 2022

On behalf of DeKalb County, you are invited to the 2nd meeting of the four-part meeting series to update the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. Your participation is a key element to the success of the plan update effort.

What: DeKalb County Multi-Jurisdictional Hazard Mitigation Plan- Meeting 2
When: Tuesday, February 8, 11 am-12:30 pm
Where: June Conley Building, 701 E. Main Street, Maysville, MO 64469
RSVP: Please RSVP by Friday, February 4 by email, phone or QR code

RSVP QR Code

During this meeting, we will discuss the plan's goals and the risks from the different types of natural disasters that DeKalb County has experienced in the past. **Also, completed questionnaire forms (risk assessment, asset inventory, and historic hazard events) will be collected from participating jurisdictions at this meeting, so please bring those along with any questions you may have.**

DeKalb County requests your assistance in forwarding this invitation to others in your jurisdiction. Participants in the planning committee include, but are not limited to: emergency responders, elected officials, county clerk, city clerks, county and city employees, schools, utilities, private-non-profit representatives, private industry and business, clergy, and community volunteers. People from various backgrounds are needed to participate. No previous experience with emergency management or planning is necessary.

The existing plan, approved by FEMA in November 2018, was developed in accordance with the Disaster Mitigation Act of 2000. To maintain eligibility for certain FEMA Hazard Mitigation Assistance grants, the Act requires jurisdictions to develop a plan to assess their risks to hazards and identify actions that can be taken in advance to reduce future losses. The Act requires Hazard Mitigation Plans to be updated every five years.

Mo-Kan Regional Council is the contact for updating the plan and will be working closely with the county commissioners and the emergency management director during the update. Please contact Mo-Kan at (816) 233-3144, email hayley@mo-kan.org or scan the QR code above to **RSVP by February 4** or to request additional information.

Thank you,

Hayley Howard and Trevor Tutt
Community Development Planners

which means face masks must be worn on public transit due to COVID-19.

Please call the OATS Transit office at 816-279-3131 or 800-831-9219 to schedule a ride or find out about service in your area.

You can also visit our website at www.oatstransit.org and click on your county under the tab "Bus Schedules" to view your local schedule.

Fares (one-way): Within county: \$3, Adjacent county: \$4, Long-distance (beyond 2 counties): \$2 per county, and \$1 each time you board the bus In-town.

Jan. 28: To Maysville and Cameron.

Feb. 4 & 18: To St. Joseph.

OATS Transit is available to the rural general public of any age, seniors, and individuals with disabilities. We also contract with a number of agencies to serve their clients.

DeKalb County Hazard Mitigation Planning Committee members needed

DeKalb County is seeking public participation in updating the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. The purpose of the plan is to mitigate the impact of natural hazards and to reduce the loss of life and property. The public can help by serving on the planning committee and/or by distributing information at public events.

The planning committee is comprised of representatives from DeKalb County, the incorporated cities, public school districts, agencies, businesses, and community volunteers. The second of four meetings will be held at 11:00 a.m. on Tuesday, February 8 at the June Conley Building, located at 701 E. Main St. Maysville, MO 64469.

The plan update will address a comprehensive list of hazards – ranging from severe winter storms and floods to drought and tornadoes – and will assess the likely impacts of these hazards on communities and school districts in DeKalb County. The committee will also update mitigation strategies and identify additional activities to reduce the vulnerability of people and property from extreme weather events.

Mo-Kan Regional Planning Commission is partnering with DeKalb County to update the plan. For more information about participating and/or to RSVP to the upcoming meeting, please email Hayley Howard at hayley@mo-kan.org or call (816) 233-3144. Please RSVP by February 4. If you cannot participate in the meeting but would like to be involved in the future, please contact us.

PRESS RELEASE

For Immediate Release

Contact: Hayley Howard
(816) 233-3144

DEKALB COUNTY HAZARD MITIGATION PLANNING COMMITTEE

DeKalb County, MO – DeKalb County is seeking public participation in updating the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. The purpose of the plan is to mitigate the impact of natural hazards and to reduce the loss of life and property. The public can help by serving on the planning committee and/or by distributing information at public events.

The planning committee is comprised of representatives from DeKalb County, the incorporated cities, public school districts, agencies, businesses, and community volunteers. The second of four meetings will be held at **11:00 am on Tuesday, February 8 at the June Conley Building, located at 701 E. Main St. Maysville, MO 64469.**

The plan update will address a comprehensive list of hazards – ranging from severe winter storms and floods to drought and tornadoes – and will assess the likely impacts of these hazards on communities and school districts in DeKalb County. The committee will also update mitigation strategies and identify additional activities to reduce the vulnerability of people and property from extreme weather events.

Feedback from the public will be incorporated into the plan, which will be available for public review and comment. Upon the formal adoption by each participating jurisdiction, the plan will be presented to Missouri State Emergency Management Agency (SEMA) and Federal State Emergency Management Agency (FEMA) for approval. Jurisdictions that participate in updating the plan will remain eligible for hazard mitigation assistance grants.

Mo-Kan Regional Planning Commission is partnering with DeKalb County to update the plan. For more information about participating and/or to RSVP to the upcoming meeting, please email Hayley Howard at hayley@mo-kan.org or call (816) 233-3144. **Please RSVP by February 4.** If you cannot participate in the meeting but would like to be involved in the future, please contact us.

Planning Meeting #2

DeKalb County Multi-Jurisdictional Hazard Mitigation Plan Update

February 8, 2022
June Conley Building

**PUBLIC SURVEY
QR CODE**

PLEASE TAKE A MOMENT **NOW** TO TAKE THE DEKALB COUNTY HMP SURVEY* ONLINE VIA THE QR CODE (take a picture of the QR code with your smart phone), OR CLICK THE LINK AT WWW.MO-KAN.ORG.
***PAPER COPIES ARE AVAILABLE UPON REQUEST**

Meeting Agenda

- Review
- Public Outreach
- Review Mitigation Goals
- Hazard Profile and Vulnerability Assessment
- Previous Occurrences
- In-Kind Match
- Next Steps

Review

- **What?** DeKalb County Hazard Mitigation Plan
- **Who?** All jurisdictions
- **Why?** To reduce loss and life and property
Also, to stay eligible for FEMA/SEMA funding
- **When?** Draft due March 2023

9 Tasks to Complete the Plan Update

- **Task 1: Determine the Planning Area**
- **Task 2: Build the Planning Team**
- **Task 3: Create an Outreach Strategy**
- **Task 4: Review Community Capabilities and Plan Goals**
- **Task 5: Conduct a Risk Assessment**
- **Task 6: Develop a Mitigation Strategy**
- Task 7: Review and Adopt the Plan
- Task 8: Keep the Plan Current
- Task 9: Create a Safe and Resilient Community

Task 3 – Create an Outreach Strategy

How do you plan to get the word out about the plan this time?

- Ready-In-3 materials available for distribution
- Any upcoming meetings where Mo-Kan staff can speak, like fire chief, LEPC meetings?
- Other ideas?
- Public survey – Survey Monkey

<https://www.surveymonkey.com/r/DeKalbCoHMP>

Task 4 – Review Community Capabilities & Plan Goals

- **Must be submitted in order to be considered a participating jurisdiction!** For the last plan, those jurisdictions that participated were: DeKalb County, Amity, Clarksdale, Maysville, Osborn, Stewartsville, Union Star, and Maysville, Osborn, Stewartsville & Union Star School Districts
- **Data questionnaires already received from:**
 - Amity**
 - Clarksdale**
 - Stewartsville**
 - Union Star**
 - Maysville School District**
 - Union Star School District**

Common Categories of Mitigation Goals

- Reduce Risk to Life and Property
- Public Education
- Policies/Planning/Training/Communication
- Protection of Critical/Essential Facilities

Every \$1 Invested in Disaster Mitigation Saves \$6

(pewtrusts.org)

Review of Past Mitigation Goals

- Goals describe the overall direction of the plan
- Jurisdictions will keep/delete/add individual actions that align with goals and objectives

2018 DeKalb County HMP Goals (pp. 4.1-4.2)

Goal 1: Protect the Lives, Property and Livelihoods of All Citizens.

Objective 1: Provide sufficient warning of impending disasters.

Objective 2: Increase knowledge of natural hazards among citizens

Objective 3: Protect residential and commercial structures in the present and future

Goal 2: Reduce the impact of disasters.

Objective 1: Manage growth in designated areas through sustainable policies, principles and practices.

Goal 3: Ensure Continued Operation of Government and Emergency Functions in a Disaster.

Objective 1: Increase disaster mitigation management capability in local governments.

Objective 2: Strengthen critical infrastructure.

Determine/Update Mitigation Goals

In groups, review 2018 goals and objectives. Be prepared to discuss:

- 1. Does the objective match the goal?***
- 2. If/why you would change one of the current goals/objectives***
- 3. What objective would you create for a pandemic hazard?***

State 2018 HMP Goals

Goal 1: Implement mitigation actions that improve the protection of human life, health, and safety from the adverse effects of disasters

Goal 2: Implement mitigation actions that improve the continuity of government and essential services from the adverse effects of disasters

Goal 3: Implement mitigation actions that improve the protection of public and private property from the adverse effects of disasters

Goal 4: Implement mitigation actions that improve the protection of community tranquility from the adverse effects of disasters

(Objectives listed in the handout)

Task 5: Hazard Identification and Risk Assessment

- Hazard Profile
 - ❑ Geographic Location
 - ❑ Severity/Magnitude/Extent
 - ❑ Previous Occurrences
 - ❑ Probability of Future Occurrence
- Vulnerability Assessment
 - ❑ Vulnerability Overview
 - ❑ Potential Losses to Existing Development
 - ❑ Future Development
 - ❑ Hazard Summary by Jurisdiction
- Problem Statement

Based on existing plan, state plan, additional information from planning committee, additional research/analysis

<https://www.mo-kan.org/community/hazard-mitigation/>

Natural Hazards for Consideration

- Dam Failure
- Drought
- Earthquakes
- Extreme Heat
- Fires (Urban/Structural and Wild)
- Flooding (Flash and River)
- Land Subsidence/Sinkholes
- Levee Failure
- Thunderstorm/High Winds/Lightning/Hail
- Tornado
- **Winter Weather/Snow/Ice/Severe Cold**
- New: Pandemic/Public Emergencies

Determine/Update Mitigation Goals

In groups, review the Hazard Identification draft. Be prepared to discuss:

- 1. Something you learned***
- 2. 1 question you have***
- 3. 1 suggestion you have***

Previous Occurrences

Each participating jurisdiction needs to answer these questions:

1. What significant natural hazards have occurred in the past five years? What was the impact?

2. Have any mitigation actions been implemented

in the past five years, such as outdoor warning sirens, tornado safe rooms, adoption of building codes, etc.

HISTORIC HAZARD EVENTS (continued)

Please fill out the sheet on the next page for each significant hazard event that affected Your Jurisdiction. **Make as many copies as necessary to record all events** and complete with as much detail as possible. This includes all events associated with the hazards listed below that have caused previous damage in your jurisdiction. It is especially important to capture events that either were not included in the previous Hazard Mitigation Plan or occurred since the plan was completed. Attach supporting documentation, photocopies of newspaper articles, or other original sources.

Task 6: Develop Mitigation Strategy

What are Mitigation Actions?

- Actions are activities/programs/etc., that support the plan's goals and objectives
- Have long-term and cumulative benefits
- Some may be low-cost and easy to implement
- Others may be dependent on available funding
- Relevant to your jurisdiction
- Jurisdiction must have one action that is potentially fundable by FEMA (**Not all actions will be eligible for FEMA grants**)

Task 6: Develop Mitigation Strategy

What are Mitigation Actions?

Data questionnaire section: Assessment of Previously Proposed Actions

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep - ✓ Delete - X Modify - M |
|--------|--|----------|---------|-------------|--|--------------------------------------|
| | | Complete | Ongoing | No Progress | | |
| 1.1.5 | Add shelters in the construction of new public facilities like libraries, community centers, etc. | | | ✓ | NO CONSTRUCTION OF THIS TYPE | X |
| 1.1.9 | Maintain up-to-date list of addresses of shelters to assist fire departments and emergency services agencies to locate survivors after a disaster. | | | ✓ | NO EMERGENCY SHELTERS | X |
| 1.1.24 | Perform street improvements to further improve drainage throughout the community | | ✓ | | IN PROCESS OF STREET REPAIRS WHEN WILL TACKLE CRITICAL RUN OFF AREAS | ✓ |

Send completed assessments to Hayley.

Review Previous Actions

- Status updates required for ALL actions from previous plan (FEMA will not approve plan without this)
- Identified as completed, deleted or continuing
- **Must be received by May 1, 2022 or considered a non-participating jurisdiction. This will make pending FEMA grant applications ineligible.**
- At our next meeting, in April, we will have workshop time for reviewing action items/formulating mitigation strategies

Create New Actions

- Should be SMART: specific, measurable, achievable, relevant and time-bound
- Complete form for new action
- Aim for a few meaningful actions
- Due by May 1- email/mail to Hayley Howard
- **Set a date when your jurisdiction will review the HMP on an annual basis – default date will be January of each year**

Specific
Measurable
Achievable
Relevant
Time-bound

In-Kind Match

- DeKalb County is responsible for **\$8,640.00** of in-kind match
- At 8% of goal with **\$680.66** of in-kind match (for meeting 1 & meeting space)
- In-kind match activities include:
 - Planning Committee (unless elected or appointed)
 - Public meeting attendees
 - Hosting public meetings and talking to community groups
 - Researching or compiling information related to the plan
 - Mileage for driving to HMP activities
 - Making copies of materials needed for the update and meetings

****All in-kind hours and labor must be properly documented***

The Next Steps

- Schedule additional public meetings and public outreach!
- 3rd Planning Committee meeting
 - April, date and time?
- Review actions and/or create new ones (deadline for new actions is May 1, 2022)
- Draft of plan will be posted in August 2022
- Available for public review/comment (30 days)
- Resolution adopting the plan due from jurisdictions by January 1, 2023

DeKalb County Multi-Jurisdictional Hazard Mitigation Plan Update Meeting Three

March 29, 2022

On behalf of DeKalb County, you are invited to the 3rd meeting of the four-part meeting series to update the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. Your participation is a key element to the success of the plan update effort.

What: DeKalb County Multi-Jurisdictional Hazard Mitigation Plan- Meeting 3

When: Tuesday, April 12, 11 am-12:30 pm

Where: DeKalb County Courthouse basement, 109 W. Main St., Maysville, MO 64469

RSVP: Please RSVP by Friday, April 8

RSVP QR Code

During this workshop meeting, Mo-Kan staff will work with the planning committee and jurisdiction representatives to review past actions and create new actions. It would be helpful for two people to be present from each jurisdiction due to the collaborative nature of this workshop.

If you represent a jurisdiction or school district, please bring the following items: completed questionnaire pages including asset inventories (critical facilities and economic assets); historic hazard events; and previously proposed action assessment pages. It is important that these documents are submitted. If your jurisdiction has already submitted these documents, they will be available for review at the meeting. **New action worksheets will also be made available at this meeting and are due April 22, 2022.**

Jurisdictions must attend at least one planning meeting to meet participation requirements; however, attending more meetings is highly encouraged. If you are unable to take part, please help by having someone from your agency/sector attend the meeting. Please contact me if no one from your jurisdiction is able to attend so that we can make other arrangements to meet.

If a representative from your jurisdiction does not participate, future funding from FEMA for mitigation projects will be jeopardized. By participating in the planning process and formally adopting the completed plan, your jurisdiction/district will be eligible for federal funding to complete such projects as relocating properties out of a floodplain, construction of tornado saferooms, and many other preventative measures meant to protect lives and property.

Mo-Kan Regional Council is the contact for updating the plan and will be working closely with the county commissioners and the emergency management director during the update. Please contact Mo-Kan at (816) 233-3144, email hayley@mo-kan.org or scan the QR code above to **RSVP by April 8** or to request additional information.

Thank you,

Hayley Howard and Trevor Tutt

DEKALB COUNTY HAZARD MITIGATION PLANNING COMMITTEE MEETING 3

DeKalb County, MO – DeKalb County is seeking public participation in updating the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. The purpose of the plan is to mitigate the impact of natural hazards and to reduce the loss of life and property. The public can help by serving on the planning committee and/or by distributing information at public events.

The planning committee is comprised of representatives from DeKalb County, the incorporated cities, public school districts, agencies, businesses, and community volunteers. The second of four meetings will be held at **11:00 am on Tuesday, April 12 at the DeKalb County Courthouse basement, located at 109 W. Main St., Maysville, MO 64469.**

The plan update will address a comprehensive list of hazards – ranging from severe winter storms and floods to drought and tornadoes – and will assess the likely impacts of these hazards on communities and school districts in DeKalb County. The committee will also update mitigation strategies and identify additional activities to reduce the vulnerability of people and property from extreme weather events.

Feedback from the public will be incorporated into the plan, which will be available for public review and comment. Upon the formal adoption by each participating jurisdiction, the plan will be presented to Missouri State Emergency Management Agency (SEMA) and Federal State Emergency Management Agency (FEMA) for approval. Jurisdictions that participate in updating the plan will remain eligible for hazard mitigation assistance grants.

Mo-Kan Regional Planning Commission is partnering with DeKalb County to update the plan. For more information about participating and/or to RSVP to the upcoming meeting, please email Hayley Howard at hayley@mo-kan.org or call (816) 233-3144. **Please RSVP by April 7.** If you cannot participate in the meeting but would like to be involved in the future, please contact us.

A grayscale background image of a stormy sky with a bright lightning bolt striking down from the clouds. The lightning bolt is the most prominent feature, extending from the upper left towards the bottom center of the frame. The clouds are dark and textured, creating a dramatic and somewhat ominous atmosphere.

DeKalb County Hazard Mitigation Plan Update

Planning Meeting #3

Tuesday, April 12 @ 11 am
DeKalb County Courthouse
Maysville, Missouri

Meeting Agenda

- Task 6: Develop a Mitigation Strategy
- New/Modified Actions – turn in by April 22, 2022

Updating Mitigation Strategy

- Goals are general guidelines that explain what you want to achieve
- Mitigation Actions are specific actions that help you achieve goals

There were 65 actions in the last plan; 31 of those are for DeKalb County. Each jurisdiction must have one potentially FEMA fundable action in the plan to be considered a “participant.”

Determine/Update Mitigation Goals

pg. 4.14-4.21; 4.33-4.65 in 2018 HMP

- **Goal 1: Protect the Lives, Property and Livelihoods of All Citizens.**

Objective 1: Provide sufficient warning of impending disasters.

Objective 2: Increase knowledge of natural hazards among citizens

Objective 3: Protect residential and commercial structures in the present and future

- DeKalb- 1.1.2, 1.2.2, 1.3.1, 1.2.a, 1.2.c, 1.2.d, 1.2.e, 1.2.f, 1.2.g, 1.2.h, 1.2.i, 1.2.m, 1.2.n, 1.2.o, 1.2.q, 1.2.r, 1.2.s, 1.2.t, 1.2.u, 1.2.v, 1.3.a, 1.3.e,

Determine/Update Mitigation Goals

Pg . 4.22-4.32; 4.66-4.78 in 2018 HMP

Goal 2: Reduce the impact of disasters.

Objective 1: Manage growth in designated areas through sustainable policies, principles and practices.

- DeKalb- 2.1.1, 2.1.a, 2.1.b, 2.1.c,

Goal 3: Ensure Continued Operation of Government and Emergency Functions in a Disaster.

Objective 1: Increase disaster mitigation management capability in local governments.

Objective 2: Strengthen critical infrastructure.

- DeKalb County- 3.1.3, 3.1.b, 3.1.c, 3.1.d, 3.2.j

Determine/Update Mitigation Goals

pg. 4.2 in 2017 HMP

- **Goal 3: Increase Resources Available to Citizens via Education and Preparedness Information.**
- Objective 1: Increase knowledge among citizens about disaster safety and preparedness.
- DeKalb County- 3.1.3, 3.1.b, 3.1.c, 3.1.d, 3.2.j

Updating Mitigation Strategy

- Previous Actions – status updates required for ALL actions from previous plan
- Some actions may be low-cost initiatives readily adopted
- Others may be dependent on available funding or outcome of a grant application

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep – ✓ Delete – X Modify – M |
|--------|--|----------|---------|-------------|--|--------------------------------------|
| | | Complete | Ongoing | No Progress | | |
| 1.1.5 | Add shelters in the construction of new public facilities like libraries, community centers, etc. | | | ✓ | NO CONSTRUCTION OF THIS TYPE | X |
| 1.1.9 | Maintain up-to-date list of addresses of shelters to assist fire departments and emergency services agencies to locate survivors after a disaster. | | | ✓ | NO EMERGENCY SHELTERS | X |
| 1.1.24 | Perform street improvements to further improve drainage throughout the community | | ✓ | | IN PROCESS OF STREET REPAIRS WHEN WILL TACKLE CRITICAL RUN OFF AREAS | ✓ |

Updating Mitigation Strategy

- New Actions - add new actions, as appropriate:
 - FEMA's Mitigation Ideas Booklet
 - Review problems from recent hazards
 - Consider problems from a potential hazard
- Discuss new action ideas with others in your jurisdiction to assure community support of action
- Consider applying for mitigation grants

New Actions

- Actions should be SMART:

Specific

Measurable

Achievable

Relevant

Time-bound

- Actions need to show action. Do not use words such as encourage, explore, recommend.
- Jurisdictions are not penalized if an action is not accomplished. (Will need to explain why)

Action Worksheet Example/STAPLEE Form

| Action Worksheet | |
|---|--|
| Name of Jurisdiction: | ST. JOSEPH |
| Risk / Vulnerability | |
| Problem being Mitigated: | PUBLIC DIDN'T HAVE INFORMATION DURING EMERGENCIES & DISASTERS |
| Hazard(s) Addressed: | DROUGHT, FLOOD, HEAT WAVE, SEVRE WINTER WEATHER, THUNDERSTORM, TORNADO |
| Action or Project | |
| Action/Project Number: | 1.1.1 |
| Name of Action or Project: | |
| Action or Project Description: | HAVE VIDEO & AUDIO PUBLIC SERVICE ANNOUNCEMENTS MADE, DELIVERED TO THE MEDIA & READY TO BE BROADCAST DURING EMERGENCIES & DISASTERS. |
| Applicable Goal Statement: | PROTECT THE LIVES, PROPERTY & LIVELIHOODS OF ALL CITIZENS |
| Estimated Cost: | |

| Local Planning Mechanisms to be Used in Implementation, if any: | |
| Progress Report | |
| Action Status | |
| Report of Progress | |
| Completed by: | |

USE THIS SPACE IF NEEDED TO EXPLAIN WHAT WAS DONE ON THE ACTION -- PLEASE BE SPECIFIC

| SHOW-ME COUNTY MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN | | |
|--|--|---------------|
| Action Title: | | Jurisdiction: |
| Action ID: | | |
| STAPLEE Criteria | Evaluation Rating Definitely YES = 3 Maybe YES = 2 Probably NO = 1 Definitely NO = 0 | Score |
| S: Is it Socially acceptable? | | |
| T: Is it Technically feasible and potentially successful? | | |
| A: Does the jurisdiction have the administrative capacity to execute this action? | | |
| P: Is it Politically acceptable? | | |
| L: Is there Legal authority to implement? | | |
| E: Is it Economically beneficial? | | |
| E: Will the project have either a neutral or positive impact on the natural environment? (score a 3 if positive impact, 2 if neutral impact) | | |
| Will historic structures be saved or protected? | | |
| Could it be implemented quickly? | | |
| STAPLEE Score | | |
| Mitigation Effectiveness Criteria | Evaluation Rating | Score |
| Will the implemented action result in lives saved? | Assign from 5-10 points based on the likelihood that lives would be saved. | |
| Will the implemented action result in a reduction of disaster damages? | Assign from 5-10 points based on the relative reduction of disaster damages. | |
| Mitigation Effectiveness Score | | |

Total Score (STAPLEE Score + Mitigation Effectiveness Score): _____

Priority Level: High (30+ points) Medium (25-29 points) Low (less than 25 points)

Completed by (name/title/phone #): _____

In-Kind Match

- DeKalb County is responsible for \$8,640 in-kind match and the county has turned in \$1,731.95 so far **(20% of goal)**
- In-kind match activities include:
 - ❑ Planning Committee (unless elected or appointed)
 - ❑ Public meeting attendees
 - ❑ Hosting meetings and talking to community groups
 - ❑ **Researching or compiling data related to the plan**
 - ❑ Mileage for driving to HMP activities

****All donated hours and labor must be documented***

Please turn in....

- Community Data Questionnaire forms (still need from Weatherby)
- Action evaluations (turn in evaluation sheets along with any STAPLEE worksheets or new action forms)
- Volunteer hours (time outside meetings spent on the HMP counts too)

Please turn action worksheets and STAPLEE criteria (if used) to Mo-Kan by Friday, April 22, 2022

The Next Steps

- Schedule additional public meetings and public outreach
- 4th Planning Meeting –Tentatively set for Tuesday, June _____, 2022
- Draft of plan will be posted in August 2022
- Available for public review/comment (30 days)
- Resolution adopting the plan due from jurisdictions by January 1, 2023

Questions

Mo-Kan Regional Council
224 N. 7th Street
St. Joseph, MO 64501
816-233-3144

Dear Planning Partners:

The fourth and final planning committee meeting for Buchanan County's HMP update will be held on **Tuesday, June 14 at 11:00 am, at the DeKalb County Courthouse, 109 W. Main St., Maysville, MO 64469.**

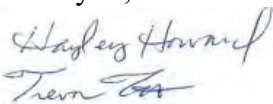

During this workshop meeting, Mo-Kan staff will present information on the plan update, as well as ask for feedback from participants on draft parts of the plan. Mo-Kan staff will also be available to field any questions proposed by jurisdictions.

Jurisdictions must attend at least one planning meeting to meet participation requirements; however, attending more meetings is highly encouraged. If you are unable to take part, please help by having someone from your agency/sector attend the meeting. Please contact us if no one from your jurisdiction is able to attend so that we can make other arrangements to meet.

If a representative from your jurisdiction does not participate, future funding from FEMA for mitigation projects will be jeopardized. By participating in the planning process and formally adopting the completed plan, your jurisdiction/district will be eligible for federal funding to complete such projects as relocating properties out of a floodplain, construction of tornado saferooms, and many other preventative measures meant to protect lives and property.

Mo-Kan Regional Council is the contact for updating the plan and will be working closely with the county commissioners and the emergency management director during the update. Please contact Hayley at 816-233-3144 or hayley@mo-kan.org to **RSVP for the meeting by Friday, June 10 (at the latest)** or if you have any questions.

Thank you,

Hayley Howard

DEKALB COUNTY HAZARD MITIGATION PLANNING COMMITTEE MEETING 4

DeKalb County, MO – DeKalb County is seeking public participation in updating the DeKalb County Multi-Jurisdictional Hazard Mitigation Plan. The purpose of the plan is to mitigate the impact of natural hazards and to reduce the loss of life and property. The public can help by serving on the planning committee and/or by distributing information at public events.

The planning committee is comprised of representatives from DeKalb County, the incorporated cities, public school districts, agencies, businesses, and community volunteers. The fourth and final meeting will be held at **11:00 am on Tuesday, June 14 at the DeKalb County Courthouse basement, located at 109 W. Main St., Maysville, MO 64469.**

The plan update will address a comprehensive list of hazards – ranging from severe winter storms and floods to drought and tornadoes – and will assess the likely impacts of these hazards on communities and school districts in DeKalb County. The committee will also update mitigation strategies and identify additional activities to reduce the vulnerability of people and property from extreme weather events.

Feedback from the public will be incorporated into the plan, which will be available for public review and comment. Upon the formal adoption by each participating jurisdiction, the plan will be presented to Missouri State Emergency Management Agency (SEMA) and Federal State Emergency Management Agency (FEMA) for approval. Jurisdictions that participate in updating the plan will remain eligible for hazard mitigation assistance grants.

Mo-Kan Regional Planning Commission is partnering with DeKalb County to update the plan. For more information about participating and/or to RSVP to the upcoming meeting, please email Hayley Howard at hayley@mo-kan.org or call (816) 233-3144. **Please RSVP by June 10.** If you cannot participate in the meeting but would like to be involved in the future, please contact us.

The lightning bolt is the most prominent feature, extending from the upper left towards the bottom center of the frame. The clouds are dark and textured, creating a dramatic and somewhat ominous atmosphere.

DeKalb County Hazard Mitigation Plan Update

Planning Meeting #4

Tuesday, June 14 @ 11 am
DeKalb County Courthouse
Maysville, Missouri

Meeting Agenda

- Review
- Public Outreach Update
- Plan Maintenance/Implementation
- Draft
- Public Comment
- Adopt the Plan
- In-Kind Match

■ Next Steps

Review

- **What?** DeKalb County Hazard Mitigation Plan
- **Who?** All participating jurisdictions
- **Why?** To reduce loss of life and property
& to stay eligible for FEMA/SEMA funding
- **When?** Draft due March 17, 2023
- **What's in-kind?** Documented local effort of volunteer hours
and/or cash

9 Tasks to Complete the Plan Update

- Task 1: Determine the Planning Area
- Task 2: Build the Planning Team
- **Task 3: Create an Outreach Strategy**
- Task 4: Review Community Capabilities and Plan Goals
- Task 5: Conduct a Risk Assessment
- **Task 6: Develop a Mitigation Strategy (See Jurisdiction Participation handout)**
- **Task 7: Review and Adopt the Plan**
- **Task 8: Keep the Plan Current**
- **Task 9: Create a Safe and Resilient Community**

Public Outreach Update

- Clarksdale Ready in 3 distribution update
- DeKalb LEPC meeting date established?
- Possibility of distributing materials at Region D solid waste recycling event?
- July 4 fire prevention tips?
- Any other efforts in the works?

Plan Maintenance

- FEMA regulations require complete plan update every 5 years
- FEMA requires a formal plan maintenance process to ensure that the HMP is an active and relevant document (see Plan Maintenance Process handout)

Plan Maintenance

- Who, how and when will the plan be monitored, evaluated and updated?
 - Annual review? After hazard events?
 - Who will organize the review? Who will participate?
 - Update status of mitigation actions?
- How will the public be involved in plan maintenance?

Plan Implementation

- How will the mitigation strategy be incorporated into other planning mechanisms?
 - Review HMP during planning process to update other plans?
 - comprehensive plans
 - capital improvement plans
 - school infrastructure or emergency plans
 - other ideas?

2018 Plan Maintenance Process

5.1 Monitoring, Evaluating, and Updating the Plan

44 CFR Requirement 201.6(c)(4): The plan maintenance process shall include a section describing the method and schedule of monitoring, evaluating, and updating the mitigation plan within a five-year cycle.

5.1.1 Responsibility for Plan Maintenance

The Mitigation Planning Committee (MPC) is not a standing committee. Responsibility for maintenance will reside with the individual jurisdictions for monitoring, evaluation and maintenance. Maintenance activities for the participating jurisdictions, including school and special districts, may involve:

- Meet bi-annually, and after a disaster event, to monitor and evaluate the implementation of the plan;
- Act as a forum for hazard mitigation issues;
- Disseminate hazard mitigation ideas and activities to all participants;
- Pursue the implementation of high priority, low- or no-cost recommended actions;
- Maintain vigilant monitoring of multi-objective, cost-share, and other funding opportunities to help the community implement the plan's recommended actions for which no current funding exists;
- Monitor and assist in implementation and update of this plan;
- Keep the concept of mitigation in the forefront of community decision making by identifying plan recommendations when other community goals, plans, and activities overlap, influence, or directly affect increased community vulnerability to disasters;

Any
changes
needed?

2018 Plan Maintenance Process

- Report on plan progress and recommended changes to the County Commissioners and governing bodies of participating jurisdictions; and
- Inform and solicit input from the public.

It's the MPC representative's primary duty to see the plan successfully carried out and to report to the community's governing boards and the public on the status of plan implementation and mitigation opportunities. Other duties include reviewing and promoting mitigation proposals, hearing stakeholder concerns about hazard mitigation, passing concerns on to appropriate entities, and posting relevant information in areas accessible to the public.

5.1.2 Plan Maintenance Schedule

The DeKalb County Emergency Management Director (EMD) will be responsible for initiating the plan review at the LEPC meeting every other year. For the other jurisdictions, their MPC representative will be responsible for initiating reviews.

In coordination with all participating jurisdictions, a five-year written update of the plan will be submitted to the Missouri State Emergency Management Agency (SEMA) and FEMA Region VII per Requirement §201.6(c)(4)(i) of the Disaster Mitigation Act of 2000, unless disaster or other circumstances (e.g., changing regulations) require a change to this schedule.

5.1.3 Plan Maintenance Process

Progress on the proposed actions can be monitored by evaluating changes in vulnerabilities identified in the plan. During the bi-annual meeting the MPC (or other designated responsible entity) should review changes in vulnerability identified as follows:

- Decreased vulnerability as a result of implementing recommended actions,
- Increased vulnerability as a result of failed or ineffective mitigation actions,
- Increased vulnerability due to hazard events, and/or
- Increased vulnerability as a result of new development (and/or annexation).

Future five-year updates to this plan will include the following activities:

- Consideration of changes in vulnerability due to action implementation;
- Documentation of success stories where mitigation efforts have proven effective;
- Documentation of unsuccessful mitigation actions and why the actions were not effective;
- Documentation of previously overlooked hazard events that may have occurred since the previous plan approval;
- Incorporation of new data or studies with information on hazard risks;
- Incorporation of new capabilities or changes in capabilities;
- Incorporation of growth data and changes to inventories; and
- Incorporation of ideas for new actions and changes in action prioritization.

In order to best evaluate any changes in vulnerability as a result of plan implementation, the participating jurisdictions will adopt the following process:

Any
changes
needed?

- Each proposed action in the plan identified an individual, office, or agency responsible for action implementation. This entity will track and report on an annual basis to the jurisdictional MPC (or designated responsible entity) member on action status. The entity will provide input on whether the action as implemented meets the defined objectives and is likely to be successful in reducing risk.
- If the action does not meet identified objectives, the jurisdictional MPC (or designated responsible entity) member will determine necessary remedial action, making any required modifications to the plan.

Changes will be made to the plan to remedy actions that have failed or are not considered feasible. Feasibility will be determined after a review of action consistency with established criteria, time frame, community priorities, and/or funding resources. Actions that were not ranked high but were identified as potential mitigation activities will be reviewed as well during the monitoring of this plan. Updating of the plan will be accomplished by written changes and submissions, as the (MPC or designated responsible entity) deems appropriate and necessary. Changes will be approved by the DeKalb County Commissioners and the governing boards of the other participating jurisdictions.

5.2 Incorporation into Existing Planning Mechanisms

44 CFR Requirement §201.6(c)(4)(ii): [The plan shall include a] process by which local governments incorporate the requirements of the mitigation plan into other planning mechanisms such as comprehensive or capital improvement plans, when appropriate.

Where possible, plan participants, including schools, will use existing plans and/or programs to implement hazard mitigation actions. Those existing plans and programs were described in Chapter 2 of this plan. Based on the capability assessments of the participating jurisdictions, communities in DeKalb County will continue to plan and implement programs to reduce losses to life and property from hazards. This plan builds upon the momentum developed through previous and related planning efforts and mitigation programs and recommends implementing actions, where possible, through the following plans:

- Comprehensive plans of participating jurisdictions;
- Ordinances of participating jurisdictions;
- Local Emergency Operations Plans;
- Capital improvement plans and budgets;
- Other community plans within the county, such as water conservation plans, storm water management plans, and parks and recreation plans; and
- School District Emergency Plans

The MPC (or designated responsible entity) members involved in updating these existing planning mechanisms will be responsible for integrating the findings and actions of the mitigation plan, as appropriate. The MPC (or designated responsible entity) is also responsible for monitoring this integration and incorporation of the appropriate information into the five-year update of the multi-jurisdictional hazard mitigation plan.

Additionally, the DeKalb County Emergency Management Director(EMD) will provide the updated mitigation strategy with current status of each mitigation action to the county commission as well as all mayors, city clerks, and school district superintendents as appropriate. The EMD will request that the mitigation strategy be incorporated, where appropriate, in other planning mechanisms

2018 Plan Maintenance Process

Table 5.1 Changes Made in Plan Update

| Jurisdiction | Planning Mechanisms | Integration Process for Previous Plan | Integration Process for Current Plan |
|------------------------------|--|--|---|
| DeKalb County | Comprehensive Plan, Local Emergency Operating Plan | Comprehensive Plan, Local Emergency Operating Plan | Comprehensive Plan, Local Emergency Operating Plan |
| Amity | None | Unknown | None |
| Clarksdale | Building Code, Storm Water Ordinance, Landscape Ordinance, Zoning/Land Use Restriction, Floodplain Ordinance | Unknown | Building Code, Storm Water Ordinance, Landscape Ordinance, Zoning/Land Use Restrictions, Floodplain Ordinance |
| Maysville | Code of Ordinances | Unknown | Code of Ordinances |
| Osborn | None | Unknown | None |
| Stewartville | Emergency Operations Plan, City Mitigation Plan, Building Code, Floodplain Ordinance, Subdivision Ordinance | Unknown | Emergency Operations Plan, City Mitigation Plan, Building Code, Floodplain Ordinance, Subdivision Ordinance |
| Union Star | Floodplain Ordinance, City Emergency Operations Plan | Unknown | Floodplain Ordinance, City Emergency Operations Plan |
| Weatherby | None | None | None |
| Maysville School District | Unknown | Unknown | Unknown |
| Osborn School District | School Emergency Plan, Master Plan, Capital Improvement Plan | School Emergency Plan | School Emergency Plan |
| Stewartville School District | School Emergency Plan, Capital Improvement Plan | School Emergency Plan | School Emergency Plan |
| Union Star School District | School Emergency Plan, Master Plan | School Emergency Plan | School Emergency Plan |

Any changes necessary?

5.3 Continued Public Involvement

44 CFR Requirement §201.6(c)(4)(iii): [The plan maintenance process shall include a] discussion on how the community will continue public participation in the plan maintenance process.

The hazard mitigation plan update process provides an opportunity to publicize success stories resulting from the plan's implementation and seek additional public comment. Information about the reviews will be posted in the local newspaper as well as on the DeKalb County website following each review of the mitigation plan. When the MPC reconvenes for the five-year update, it will coordinate with all stakeholders participating in the planning process. Included in

Draft

- When a draft of the plan is near completion (after committee and public comment period), Mo-Kan will coordinate the adoption of the plan with the various jurisdictions
- Draft will be provided to committee (July 28-Aug. 12) for committee review & to public for comment (Sept. 1-Sept 30) through Mo-Kan website at mo-kan.org
- Notice should be given to the public that the plan is available for review
- See Draft handout

Plan Adoption

- Jurisdictions must formally adopt the HMP at a council or board meeting
- Jurisdictions will turn in adoption resolution to Mo-Kan by January 1, 2023
- Once all resolutions are received, they will be sent to the state along with the draft, which is due to SEMA by March 17, 2023

In-Kind Match

- DeKalb County is responsible for \$8,640 in-kind match and the county has turned in \$2,458.25 so far **(28% of goal)**
- In-kind match activities include:
 - ❑ Planning Committee (unless elected or appointed)
 - ❑ Public meeting attendees
 - ❑ Hosting meetings and talking to community groups
 - ❑ **Researching or compiling data related to the plan**
 - ❑ Mileage for driving to HMP activities

****All donated hours and labor must be documented***

The Next Steps

- Schedule additional public meetings and public outreach
- Draft of plan will be posted for two-week committee review beginning July 28 (please review your jurisdiction's info in Ch. 2 (planning area/profile capabilities + your jurisdiction's actions in Ch. 4))
- Available in Sept. for public review/comment (30 days)
- Resolution adopting the plan due from jurisdictions by **January 1, 2023**

DEKALB COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN

Kick-Off Meeting: Tuesday, December 7, 2021 @ 11 am @ 701 E. Main St. in Maysville

Photos courtesy (clockwise): <https://www.sbarrowhealth.org>, <https://www.aarod.com>, <https://www.stewartville.k12.mo.us>, Mo-Kan staff

WHAT IS A HAZARD MITIGATION PLAN?

A hazard mitigation plan (HMP) is “the representation of the jurisdiction’s commitment to reduce risks from natural hazards, serving as a guide for decision makers as they commit resources to reducing the effects of natural hazards” (44 CFR§ 201.6). HMPs are necessary to establish and maintain eligibility for grant funds. The planning process is as important as the plan itself because it creates a framework for governments to reduce the negative impacts from future disasters on lives, property, and the economy.

Hazard mitigation planning can significantly reduce the physical, financial, and emotional losses caused by disasters. The Disaster Mitigation Act of 2000 is federal legislation that established a pre-disaster hazard mitigation program and requirements for the national BRIC (Building Resilient Infrastructure and Communities) program. It encourages and rewards state and local pre-disaster planning and promotes sustainability. Completion of an HMP will result in more effective risk reduction projects and in a faster and more efficient allocation of funding.

PURPOSE

The DeKalb County Emergency Management Agency is leading the update of the countywide HMP, in cooperation with our region’s planning council (Mo-Kan). This plan is an opportunity to detail a variety of potential hazards that affect some or all of our residents and will also allow the county and participating municipalities to be eligible for future mitigation funding from the Federal Emergency Management Agency (FEMA).

The goal of the plan is to identify projects that can reduce damages from future hazards. The plan includes a risk assessment and a hazard mitigation strategy. The primary natural hazards of concern in DeKalb County include: Drought, Severe Weather, Severe Winter Storm, Flood, Dam Failure, and Extreme Temperature. In addition, the County is evaluating the pandemic.

The plan will focus on existing buildings and potential future development, infrastructure, critical infrastructure, and critical facilities such as water utilities, roadways, and municipal buildings that might be impacted.

What are the benefits of participating in the Hazard Mitigation Plan?

There are numerous benefits to participating in the HMP including:

- Awareness of risk and vulnerabilities
- Identification of implementable strategies and funding sources
- Reduction of hazard impact (save lives, property, and the local economy)
- Creation of partnerships and development of comprehensive approaches that enhance project grant funding opportunities.
- Pooling of resources and reducing the level of effort while avoiding duplication of effort.
- Creation of more resilient communities; bounce-back from disasters faster!

FAQS ABOUT THE PLAN

How can you reduce/eliminate risk? Identify mitigation actions/projects/activities or processes that can include **1)** Local plans and regulations; **2)** Structure and infrastructure projects; **3)** Natural systems protection; **4)** Education and awareness programs.

What grant funding is available? FEMA Hazard Mitigation Assistance grant funding is available with a FEMA-approved Hazard Mitigation Plan (annual and post-disaster grant funding opportunities).

How can I support the plan? Take the citizen survey! This will help us obtain input and get a better understanding of citizen preparedness for hazard events.

Where can I see the 2023 plan? Sections of the draft plan will be available in Spring 2022 for download, review and comment at:

<https://www.mo-kan.org/community/hazard-mitigation/>

PHASES OF THE PLAN

SUPPORT THE PLAN

Public input on the mitigation planning process is very important. Here are a few ways to get involved:

1. Review the existing plan and reach out with comments on the update.
2. Take the citizen survey!

Hayley Howard
Community Planner,
Mo-Kan Regional Council
hayley@mo-kan.org

1. Public Survey: DeKalb County Multi-Jurisdictional Hazard Mitigation Plan

DeKalb County is updating its Multi-Jurisdictional Hazard Mitigation Plan (HMP). The goal of the HMP is to reduce the impacts of natural hazards by identifying potential hazards and developing mitigation strategies. This important planning process makes our communities more resilient and better prepared before a disaster happens.

Public opinion is important to the planning process. Your comments will help inform your community's representatives who are on the HMP planning committee. By participating in this five-year update of the plan, your community will also remain eligible for mitigation funding programs from the Federal Emergency Management Agency (FEMA). Please take a few minutes to answer the following questions.

**We appreciate you taking the time to share your opinions.
Thank you.**

1. Where in the county do you live? Please select your community from the list:

Village of Amity

City of Stewartsville

City of Clarksdale

City of Union Star

City of Maysville

Village of Weatherby

City of Osborn

Unincorporated DeKalb County

2. Please indicate your opinion on the *likelihood* for each hazard to impact *your community* using the following rating system. Please rate EACH hazard using the following rating system:

| | Unlikely | Occasional | Likely | Highly Likely |
|--|--------------------------|--------------------------|--------------------------|--------------------------|
| Dam Failure | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Drought | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Earthquake | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Extreme Heat | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Fire | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Flooding (Flash and River) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Land Subsidence/Sinkhole | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Levee Failure | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Public Health Outbreak | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Thunderstorm/High Winds/Lightning/Hail | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Tornado | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Winter Weather/Snow/Ice/Severe Cold | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

3. Please indicate your opinion on the *potential magnitude* of each hazard's impact on your community using the following rating system:

| | No Impact | Limited | Critical | Catastrophic |
|--|--------------------------|--------------------------|--------------------------|--------------------------|
| Dam Failure | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Drought | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Earthquake | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Extreme Heat | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Fire | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Flooding (Flash and River) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Land Subsidence/Sinkhole | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Levee Failure | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Public Health Outbreak | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Thunderstorm/High Winds/Lightning/Hail | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Tornado | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Winter Weather/Snow/Ice/Severe Cold | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

4. In your opinion, which of the following strategies are the most effective investments to reduce the risk of future hazard damage? Please check all that apply.

- Upgrade infrastructure
- Avoid new construction in areas prone to damage
- Work more closely with private property owners
- Invest more resources in preventative maintenance
- Conduct education and awareness programs
- Other (please specify)
- Invest in more monitoring and planning for protection of community assets
- Planning to address hazards
- Investment in health care facilities & public health outreach
- Acquisition of safety equipment

5. FEMA Hazard Mitigation Assistance Grants are administered by the State Emergency Management Agency. Listed below are some types of projects considered.

Please indicate your opinion as to which projects could benefit your community. Check all that you think would be beneficial.

- | | |
|--|---|
| <input type="checkbox"/> Flood-prone Property Acquisition & Structure Demolition /Relocation | <input type="checkbox"/> Retrofitting of Existing Buildings, and Facilities from Wind Damage. |
| <input type="checkbox"/> Flood-Prone Structure Elevation | <input type="checkbox"/> New Tornado Safe Room Construction |
| <input type="checkbox"/> Structural Retrofitting of Existing Buildings to Add a Tornado Safe Room | <input type="checkbox"/> Electrical Utilities Infrastructure Retrofit |
| <input type="checkbox"/> Wildfire Mitigation | <input type="checkbox"/> Soil Erosion Stabilization |
| <input type="checkbox"/> Minor Localized Flood Reduction Projects (storm water management or localized flood control projects) | <input type="checkbox"/> Safety Equipment/PPE |
| <input type="checkbox"/> Other (please specify) | |

6. Please comment on any other issues that the Buchanan County Hazard Mitigation Planning Committee should consider in developing a strategy to reduce future losses caused by natural/man-made disasters.

Q1 Where in the county do you live? Please select your community from the list:

Answered: 9 Skipped: 1

| ANSWER CHOICES | RESPONSES |
|------------------------------|-----------|
| Village of Amity | 0.00% 0 |
| City of Clarksdale | 0.00% 0 |
| City of Maysville | 77.78% 7 |
| City of Osborn | 0.00% 0 |
| City of Stewartsville | 0.00% 0 |
| City of Union Star | 11.11% 1 |
| Village of Weatherby | 0.00% 0 |
| Unincorporated DeKalb County | 11.11% 1 |

DeKalb County Multi-Jurisdictional Hazard Mitigation Plan

Appendix C:

Mitigation Actions

ASSESSMENT OF PREVIOUSLY PROPOSED ACTIONS

Jurisdiction: Dekalb

Directions: Check complete, ongoing or no progress for status of action, describe how it was completed, what progress has been made if it's ongoing, OR why no progress was made. Finally, put a checkmark to keep the action in the new plan, an X to delete it, or M if you want to modify it (a new action worksheet will need to be filled out showing the changes to the action). Review the action worksheets from the last plan for more information.

The contractor/plan development facilitator has provided a list of actions proposed in the previously approved plan for each jurisdiction. Use the worksheet below to evaluate whether each action is still current, feasible, desirable, and/or creates benefit that outweighs the cost.

The worksheet should include information on the status of the action and progress made in implementation, if any. This includes:

- For **completed actions** provide a description of the implementation process. This may be a success story you would like to publicize in your community.
- Some of the actions might have been **ongoing** in nature, such public information and education programs. When this is the case, indicate what activity has occurred during the previous five years, and indicate if this program is still viable enough that it should be carried on into the future.
- If **no progress** has been made in the implementation of a given action, discuss why. Note that implementation is not a requirement. However, if no progress has been made, perhaps this is an action that would be appropriate to delete in the updated plan.

During review of the previously approved actions, consider whether any new actions should be proposed. Perhaps damages from a recent hazard event have indicated the need for new approaches to protect property and life. Review the problem statements from the updated plan for ideas. Also review the FEMA publication *Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards (January 2013)*.

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep - Delete - X Modify - M |
|-------|--|----------|---------|-------------|--|------------------------------------|
| | | Complete | Ongoing | No Progress | | |
| 1.1.2 | Place outdoor warning sirens in populated areas that do not have them. | | X | | In the process. Was waiting on funding | ✓ |
| 1.2.2 | Acquire a generator for a second critical facility. | | X | | Senior center purchased generator. | ✓ |
| 1.2.a | Implement public education campaign on disaster preparedness. | | X | | | ✓ 25 |

We now have the funding. We have purchased the new system, just waiting for sirens to be installed, 60-90 days.

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep - <input checked="" type="checkbox"/> Delete - <input checked="" type="checkbox"/> Modify - <input type="checkbox"/> M |
|-------|---|----------|---------|-------------|--|--|
| | | Complete | Ongoing | No Progress | | |
| 1.2.c | Have public service announcement made and prepared to deliver to media during emergencies, using state resources as a guide. Include phone numbers for emergency services, Red Cross, hospitals, SEMA, etc. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.d | Develop a web page for the Local Emergency Planning Committee and emergency services to be part of the DeKalb County web site and link to other county web sites. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.e | Conduct a public education campaign to inform citizens of the benefits of constructing tornado safe rooms in their home or business. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.f | Participate in SEMA public education campaign to inform dam owners and citizens living near dams about the need to properly maintain and upgrade these structures. | | | X | | X |
| 1.2.g | Public education campaign to inform citizens on how to winterize their homes, shut off water and all utilities in case of emergency. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.h | Distribute information to travelers about winter hazards. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.i | Inform citizens on how to take water-saving measures, such as using low-flow showerheads and toilets. Include alerts about boil order and advisories. | | X | | | <input checked="" type="checkbox"/> |
| 1.2.m | Individuals will be informed about wildfires and the importance of identifying several escape routes away from their home by car and foot. | | X | | | <input checked="" type="checkbox"/> |

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep - Delete - X Modify - M |
|------------|---|----------|--------------|-------------|--|------------------------------------|
| | | Complete | Ongoing | No Progress | | |
| 1.2.n | Broadcast fire hazard level and open burning information on weather radio and local media. Work in conjunction with local fire districts to provide information. | ✓ | X | | County has early warning system in place, & in process of updating outdoor warning signs | ✓ |
| 1.2.o | Work with businesses and departments of county government to implement snow-day policies to reduce the amount of people on the road during severe winter weather. | | X | | | ✓ |
| 1.2.q | Designate certain air conditioned facilities, such as the senior center, as heat emergency shelters. | ✓ | X | | CERT House senior center, Methodist Church in Marysville | ✓ |
| 1.2.r | Inventory facilities with generators and/or emergency power that can be used as shelters in the event of natural disasters. | ✓ | X | | no Red shelters in County | ✓ |
| 1.2.s | Establish emergency access routes and evacuation routes. | | X | | | ✓ |
| 1.2.t | Form and train Community Emergency Response Teams (CERT). | | | X | | ✓ |
| 1.2.2 3 | Work with Red Cross to establish shelters for vulnerable populations and stranded motorists during severe winter weather. | | X | | | ✓ |
| 1.2.v | Information to home owners and public building maintenance about how to prevent roof and wall damage from "Ice dams." | | X | | | ✓ |
| 1.3.a | Assess public facilities and identify suitable areas safe during times of severe storms or tornados. If available, these areas should be clearly marked. | | X | | | ✓ |

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep <input checked="" type="checkbox"/> Delete <input type="checkbox"/> Modify <input type="checkbox"/> M |
|-------|---|----------|---------|-------------|--|--|
| | | Complete | Ongoing | No Progress | | |
| 1.3.e | Work with volunteer groups to assist at-risk residents in winterizing their homes. | | X | | | <input checked="" type="checkbox"/> |
| 2.1.a | Develop environmentally sound watershed and storm water practices to decrease flash flooding. | | X | | | <input checked="" type="checkbox"/> |
| 2.1.b | Craft new plans and update comprehensive land use plans to address development in hazard-prone areas and identify strategies for decreasing vulnerability to hazards. | | X | | | <input checked="" type="checkbox"/> |
| 2.1.c | Develop an accurate countywide series of maps detailing the flood plain, flash flood danger zones and other hazard areas. | | X | | | <input checked="" type="checkbox"/> |
| 3.1.a | Work with state and local governments to raise awareness of earthquake mitigation activities in homes, schools and businesses. | | X | | | <input checked="" type="checkbox"/> |
| 3.1.b | Execute and maintain mutual aid agreements with all relevant agencies. | | X | | | <input checked="" type="checkbox"/> |
| 3.1.c | Expand the county emergency management director position to full time. | | | X | | <input checked="" type="checkbox"/> |
| 3.1.d | Have a debris management plan for the county to take care of debris after storms | | X | | | <input checked="" type="checkbox"/> |
| 3.2.j | Evaluate the location of 911 dispatch center and consider other possible locations. | | X | | | <input checked="" type="checkbox"/> |

ASSESSMENT OF PREVIOUSLY PROPOSED ACTIONS

Jurisdiction: Clarksdale

Directions: Check complete, ongoing or no progress for status of action, describe how it was completed, what progress has been made if it's ongoing, OR why no progress was made. Finally, put a checkmark to keep the action in the new plan, an x to delete it, or M if you want to modify it (a new action worksheet will need to be filled out showing the changes to the action). Wed, May 18, 2022 at 5:16 PM

Michael,

I was following up on the message below that I sent you last week. Also, I realized that on your action items review, a few of the actions listed in the last plan weren't included in the action assessment sheet I sent you. I apologize! Can you also please complete the chart on these action items (below) and return at your earliest convenience? Thanks again for your help!

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep - ✓ Delete - X Modify - M |
|-------|---|----------|---------|-------------|--|--------------------------------------|
| | | Complete | Ongoing | No Progress | | |
| 1.2.b | Encourage local fire departments and other emergency responders to participate in regular disaster drills at school. Purchase radios and other necessary equipment to carry out drills and inform students of an emergency. | | X | | | ✓ |
| 1.1.j | Include safety strategies for winter driving in driver safety training. | | | | | X |
| 1.3.c | Assess public facilities and identify suitable areas safe during times of severe storms or tornadoes. If available, these areas should be clearly marked. | | X | | | ✓ |
| 3.1.h | Work with state and local governments to raise awareness of earthquake mitigation activities in homes, schools and businesses. | | X | | | ✓ |

Subject: Additional Hazard Mitigation Questions
To: Michael Stephenson <mstephenson@stewartsville.k12.mo.us>

Michael,

There are a few more questions I need answered for the plan update. Can you tell me Yes or No on the following for your district:

| | |
|---------------------------------------|---------|
| Public Education Programs | YES |
| Privately or Self- Insured? | Private |
| Fire Evacuation Training | YES |
| Tornado Sheltering Exercises | YES |
| Public Address/Emergency Alert System | Yes |
| NOAA Weather Radios | Yes |
| Lock-Down Security Training | YES |
| Mitigation Programs | YES |
| Tornado Shelter/Saferoom | No |
| Campus Police | Yes |

Thanks!!

Hayley Howard

ASSESSMENT OF PREVIOUSLY PROPOSED ACTIONS

Jurisdiction: Union Star School District

Directions: Check complete, ongoing or no progress for status of action, describe how it was completed, what progress has been made if it's ongoing, OR why no progress was made. Finally, put a checkmark to keep the action in the new plan, an x to delete it, or M if you want to modify it (a new action worksheet will need to be filled out showing the changes to the action). Review the action worksheets from the last plan for more information.

The contractor/plan development facilitator has provided a list of actions proposed in the previously approved plan for each jurisdiction. Use the worksheet below to evaluate whether each action is still current, feasible, desirable, and/or creates benefit that outweighs the cost.

The worksheet should include information on the status of the action and progress made in implementation, if any. This includes:

- For **completed actions** provide a description of the implementation process. This may be a success story you would like to publicize in your community.
- Some of the actions might have been **ongoing** in nature, such public information and education programs. When this is the case, indicate what activity has occurred during the previous five years, and indicate if this program is still viable enough that it should be carried on into the future.
- If **no progress** has been made in the implementation of a given action, discuss why. Note that implementation is not a requirement. However, if no progress has been made, perhaps this is an action that would be appropriate to delete in the updated plan.

During review of the previously approved actions, consider whether any new actions should be proposed. Perhaps damages from a recent hazard event have indicated the need for new approaches to protect property and life. Review the problem statements from the updated plan for ideas. Also review the FEMA publication *Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards (January 2013)*.

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep – ✓ Delete – X Modify – M |
|-------|---|----------|---------|-------------|--|---|
| | | Complete | Ongoing | No Progress | | |
| 2.1.9 | Require the building of a safe room with the capacity to handle the population of any significant renovation or expansion of school facilities | | | X | Finances | ✓ |
| 1.1.b | Use electronic media and radios to communicate alerts and warnings. Current system uses phone messages; upgrade system to include cell phones and utilize texting technology. Purchase radios for busses. | X | | | | X |
| 1.3.d | Assess public facilities and identify suitable areas safe during times of severe storms or tornados. If available, these areas should be clearly marked. | | X | | | ✓ |

ASSESSMENT OF PREVIOUSLY PROPOSED ACTIONS

Jurisdiction: Weatherby

The contractor/plan development facilitator has provided a list of actions proposed in the previously approved plan for each jurisdiction. Use the worksheet below to evaluate whether each action is still current, feasible, desirable, and/or creates benefit that outweighs the cost.

The worksheet should include information on the status of the action and progress made in implementation, if any. This includes:

- For **completed actions** provide a description of the implementation process. This may be a success story you would like to publicize in your community.
- Some of the actions might have been **ongoing** in nature, such public information and education programs. When this is the case, indicate what activity has occurred during the previous five years, and indicate if this program is still viable enough that it should be carried on into the future.
- If **no progress** has been made in the implementation of a given action, discuss why. Note that implementation is not a requirement. However, if no progress has been made, perhaps this is an action that would be appropriate to delete in the updated plan.

During review of the previously approved actions, consider whether any new actions should be proposed. Perhaps damages from a recent hazard event have indicated the need for new approaches to protect property and life. Review the problem statements from the updated plan for ideas. Also review the FEMA publication *Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards (January 2013)*.

| # | Action | Status | | | Description of Implementation Activities or Reasons for Lack of Progress | Keep – ✓ Delete – X Modify – M |
